*Statistics of Urban Municipal Electrical Utilities of Ontario Served by the Commission.*—In the Annual Report of the Commission detailed consolidated balance sheets and operating reports are given for the 308 urban electrical utilities served.

The balance sheet shows that the total plant value has increased from \$10,081,469 in 1913 to \$126,096,692 in 1948, and the total assets from \$11,907,827 to \$259,296,737. The liabilities have not increased in the same proportion as the assets, rising from \$10,468,352 to a maximum of \$52,685,317 in 1932, and receding to \$12,792,273 in 1948, due to the regular fulfilment of debt retirement schedules under serial debenture provisions or by maturity of sinking funds, and because cost of the increasing plant value has been financed mainly out of reserves and surplus without increasing the capital liabilities of the respective utilities.

The operating report for 1948 shows that of the 308 municipal electrical utilities included in this statement, 305 received from consumers sufficient revenue to meet all operating expenses, interest, debt retirement instalments, and standard depre-

ciation reserve allocation, and to yield an aggregate net surplus of \$4,277,305 for the year; the other three utilities were able to defray out of revenue all such charges, except \$1,414 of the standard depreciation allocation.

*Rural Electrical Service in Ontario.*\*—During past years substantial progress has been made in Ontario in the field of rural electrification, and the Commission's rural operations are now an important feature of its work. The Ontario Government, pursuant to its policy of promoting agriculture contributes, in the form of 'grants-in-aid', 50 p.c. of the initial capital cost of distribution lines and equipment. In 1930, the Ontario Government passed legislation providing for advances up to \$1,000 to farm owners of lands and premises in rural power districts for the installation of electrical wiring, the purchase of equipment and providing for the fixing of low maximum service charges for all classes of rural Hydro service.

*Uniform Rural Rate Structure.*—A new uniform rural rate structure, for the sale of energy, became effective Jan. 1, 1944, for all rural Hydro service in Ontario.

The new energy rates consist of the following three-step energy charge:

- (1) a first block or number of kilowatt-hours of energy consumption in the billing period, charged for at 3.5 cents gross per kilowatt-hour;
- (2) a second block or number of kilowatt-hours of energy consumption in the billing period, charged for at 1.6 cents gross per kilowatt-hour; and
- (3) all remaining kilowatt-hours of energy consumption in the billing period, charged for at 0.75 cents gross per kilowatt-hour.

In addition, the service charge in use prior to Jan. 1, 1944, has been eliminated in the case of farm and commercial service, reduced by 50 p.c. in the case of hamlet service and changed to an annual fixed charge in the case of summer service.

*Farm Rate.*—More than 95 p.c. of the farms receiving Hydro service are served at the minimum demand rating for billing purposes of 3 kilowatts. This is a 3-wire service with a fuse rating of 35 amperes on each side of the neutral. There is no service charge for farm consumers. The first energy rate of 3.5 cents per kilowatt-hour applies to the first 60 kilowatt-hours per month. The second energy rate of 1.6 cents per kilowatt-hour applies to the next 180 kilowatt-hours per month. For all remaining energy consumption in the billing period the rate is 0.75 cents per kilowatt-hour.

The minimum bill is \$2.25 per month. A prompt payment discount of 10 p.c. is made on the total bill.

\* Legislation passed concerning rural power is as follows: the Power Commission Act (R.S.O. 1937, c. 62); the Rural Hydro-Electric Distribution Act (R.S.O. 1937, c. 64); the Rural Power District Loans Act (R.S.O. 1937, c. 65); and the Rural Power District Service Charge Act (R.S.O. 1937, c. 66).

**Manitoba.**—The Manitoba Power Commission commenced its operations in 1919 under the authority of the Electrical Power Transmission Act. This Act empowered the Commission to make provision for generating electric energy, to enter into contracts for the purchase of power in bulk from generating agencies, and for its transmission and sale to municipalities, corporations and individuals. The first stretch of transmission line was completed in 1920 from Winnipeg to Portage la Prairie.

For the first ten years power was purchased in bulk from the Winnipeg Hydro-Electric System. At the expiration of this period, the Seven Sisters Agreement between the Manitoba Government and the Winnipeg Electric Company provided for the reservation of a block of power for the Power Commission.

The Manitoba Power Commission Act of 1931 provided for the reorganization of the utility's administration. Bulk contracts were cancelled and service begun direct to the consumer, municipalities and towns having contracts for street lighting only. This made possible the adoption of a policy by which the Commission might eventually establish standard rates for all towns and villages regardless of distance from the source of supply or the sparseness of population.

The expansion of the utility since 1931 shows the importance of this reorganization. In 1931 there were 56 cities, towns and villages on the System; 281 communities were served in 1948. Revenue increased from \$700,000 to over \$3,284,000. Rate reductions, meanwhile, have reduced the average customer cost per kilowatt-hour by 50 p.c.

The successful growth of the network to the majority of the cities, towns, and villages of the Province, made it possible for the Commission to consider a project of extending electric service to the farms. The Manitoba Electrification Enquiry Commission appointed by the Provincial Government in 1942 to study farm electrification in the Province, reported electric service could be brought to at least 90 p.c. of the farms in the Province. Previously, individual or small groups of farms situated near existing low voltage transmission lines were connected on a contributory basis.

Construction under the farm program began on an experimental basis in 1945 when transmission lines were built to serve 674 farms in seven test areas. Under the farm electrification program the Commission bears the expense of building the power line right into the farm-yard, the farmer being responsible for his yard and interior wiring, and for the purchase of appliances. Post-war shortage of line materials restricted this program to 1,500 farms in 1946 and 3,500 in 1947. Substitution of Manitoba jack-pine poles and the establishment of a transformer factory and the development of miscellaneous pole-line hardware manufactures in the Province, enabled the Commission, in 1948, to return to the original plan of construction to 5,000 farms annually.

In conjunction with the farm program, the Commission is constructing lines to serve every community having a population of at least 20 persons, located within the practical service area of the Province. Following the connection of 103 communities scheduled to receive service during 1948 and 1949, 346 cities, towns, villages and hamlets will be supplied with power by the Commission.

**Saskatchewan.**—The Saskatchewan Power Commission was established in 1929 under the Power Commission Act (R.S.S. 1940, c. 33) which authorized the Commission to manufacture, sell and supply electric energy, to acquire and develop

water-power sites, to acquire or construct oil and steam plants, to construct transmission lines, to purchase power and to enter into contracts with municipalities for the supply of electric energy.

During the years 1929 to 1945, the Commission purchased certain generating plants, and constructed and purchased transmission lines and also distribution systems in towns and villages. These were improved, enlarged or supplemented. Particulars of these acquisitions and constructions are given in the 1941 Year Book and subsequent editions.

On Jan. 1, 1947, Dominion Electric Power Limited, which up to that date had been operated as a wholly owned subsidiary, was completely absorbed by the Commission, and on the same date the properties of Canadian Utilities Limited in Saskatchewan, with the exception of its Lloydminster plant, were acquired and added to the Commission's system.

Including the properties acquired from the private companies mentioned, the Commission at the end of the year 1948 owned and operated 4,190 miles of transmission line and distribution systems in 375 cities, towns and villages served from the system. Steam generating plants with a total installed capacity of 63,950 kw. are located at Estevan, North Battleford, Prince Albert, Saskatoon and Taylorton, while diesel plants with a total installed capacity of 27,435 h.p. are located at Assiniboia, Biggar, Canora, Davidson, Eastend, Grenfell, Hudson Bay, Humboldt, Kindersley, Leader, Maple Creek, Meadow Lake, Melfort, Melville, Moosomin, Nipawin, Perdue, Rosetown, Shaunavon, Shellbrook, Swift Current, Tisdale, Unity, Watrous, Wynyard and Yorkton. The Commission also purchased several blocks of power from one city (Regina) and one power company. Electrical energy was sold retail direct to consumers, except in the cities of North Battleford, Saskatoon and Swift Current and the town of Battleford, where energy is furnished in bulk to the municipal corporations and retailed by them to the consumers. The number of customers served direct at the end of 1948 (including rural services) was 51,237, while the number served by municipalities buying power in bulk from the Commission was 19,772.

During 1947, 132 cities, towns, villages and hamlets were added to the Commission's system, including 64 taken over from Dominion Electric Power, Limited and Canadian Utilities, Limited. In 1948, 32 towns and villages were added to the Commission's system.

In 1947, approximately 465 miles, and in 1948, approximately 650 miles of transmission lines were constructed.

Substantial alterations were made in existing lines radiating out of the City of Saskatoon, including the installation of a new underground cable from the Saskatoon plant to the Commission's substation and switch centre on the outskirts of the city.

In the years 1947 and 1948 substantial additions were made to the Commission's steam generating plants at Estevan, Prince Albert and Saskatoon. In the same years, additions were made to certain of the Commission's diesel plants, and a new diesel plant was established at Moosomin containing two 875 h.p. Busch-Sulzer units; four diesel plants were closed down because of the extension of transmission lines. In the Commission's generating plant at Unity a 520 h.p. gas diesel generating unit and two 800 h.p. natural gas generating units were installed and put in operation.

Transmission lines constructed in 1948 included a 24 kv. line 134 miles in length connecting the Unity plant with the towns of Wilkie, Scott, Kerrobert and Kindersley and the Commission's Luseland system.

Regina and Weyburn as well as a number of small towns and villages own and operate their municipal plants and distribution systems. The plant and distribution system in the city of Moose Jaw, and a short transmission line south of that city are owned and operated by a private company.

### 21.—Growth of the Saskatchewan Power Commission, 1934-48

NOTE.—Figures for the years 1929-33, inclusive, will be found at p. 499 of the 1947 Year Book.

Control and regulatory powers regarding franchises for the supply of electric energy and the rates to be charged therefor are conferred upon the Local Government Board by Part III of the Public Utilities Companies Act (R.S.S. 1940, c. 118). The Commission is given certain control and regulatory powers regarding electrical public utilities under Part III of The Power Commission Act.

On Feb. 1, 1949, under the terms of the Crown Corporations Act, 1947 (c. 13), the Saskatchewan Power Corporation took over the assets and assumed the obligations of the Saskatchewan Power Commission. A number of provisions of the Power Commission Act were made applicable to the Corporation which consists of a body corporate of six members appointed by the Lieutenant-Governor in Council. Control and regulation of electricity and natural and manufactured gases were left to the Commission.

In 1949 the Rural Electrification Act was passed. This Act provides for the supply of power to rural customers by means of lines owned by the Saskatchewan Power Corporation, either in rural districts or to individuals or small groups not within rural districts. It also provides for bulk supply of power to rural power co-operative associations.

**Alberta.**—Public ownership of power-generating and distributing systems in Alberta is confined to certain urban municipalities. The regulatory authority over privately-owned systems is the Board of Public Utility Commissioners, which has jurisdiction over the distribution and sale of electricity. The Board has power to hold investigation upon complaint made either by a municipality or by a utility company and, following such investigation, may fix just and reasonable rates.

There are three private utility services in the Province, the Calgary Power, Limited, Canadian Utilities, Limited, and Northland Utilities, Limited. A short synopsis of these services is given below.

*Calgary Power Limited.*—This Company has five hydro-generating plants on the Bow River and its tributaries, west of Calgary. These plants are: the Horseshoe Falls, Kananaskis Falls, Ghost River with a storage reservoir capacity of 74,000 acre-feet of water, Cascade and Barrier plants, total 105,000 h.p., which capacity will be increased to almost 200,000 h.p. when Spray—now under construction—is completed. The Barrier plant, completed in 1947, is operated by remote control. In addition to the Ghost storage, the Company has reservoirs at Lake Minnewanka and the Upper Kananaskis Lake, and Spray Lakes when completed.

Power from these plants together with that received under interchange agreements with the cities of Lethbridge and Edmonton, the East Kootenay Power Company, Limited, and the 14,000 h.p. steam plant at Calgary, is fed into a transmission network which supplies the entire electrical requirements of the cities of Calgary and Red Deer, and 180 towns, villages and hamlets in central and southern Alberta. Calgary Power, Limited, transmission system, comprising 4,000 miles of lines of all voltages, extends from the International Boundary to Westlock, 60 miles north of Edmonton, and in the central part of the Province extends west to the Brazeau coal fields at Nordegg and east to Macklin, Sask. Calgary and Lethbridge and the towns of Ponoka, Macleod and Cardston are supplied upon a wholesale basis and own their own distribution systems. All other points upon the system are supplied on a retail basis.

The Company has 3,800 miles of transmission lines and 431 miles of distribution lines. An extensive farm electrification program is in progress and at Apr. 1, 1949, the Company was supplying approximately 4,000 farms. Under a co-operative arrangement, 2,500 to 3,000 farms will be added each year in this program, the company doing all engineering, construction and operation through a non-profit subsidiary, energy being supplied to the farm co-operative customers at cost. Alberta's sparse farm population presents an enormous problem to a farm electrification program of any type.

The Company's transmission systems are designed with a view to future expansion. Expansion of power generating facilities is presently under way. The Spray Lakes project, scheduled for completion in 1950, will develop ultimately a total of 89,000 h.p., the largest hydro installation in the Province. Immediate construction of two hydro plants, to be known as Spray and Three Sisters, will add 62,000 h.p. and 3,600 h.p., respectively. The third, the Rundle plant, is a future project, and will have a capacity of 23,000 h.p. Five dams will impound water in three storage reservoirs, developing a total head of 1,285 ft. when the system is complete.

*Canadian Utilities Limited.*—Towns and villages northeast of Drumheller are supplied from a 13,500 kw. steam plant in that city, by Canadian Utilities, Limited, while towns and villages north and east of Vegreville are served from a new gas-fired 7,500 kw. steam plant at Vermilion. There are also diesel stand-by plants at Lloydminster and a tie-line with Calgary Power, Limited, near Holden. This utility also serves the areas around Grande Prairie from a 2,300 h.p. diesel-engine plant located in that centre. The Company serves over 16,000 customers, in approximately 100 towns, villages and hamlets in the Province, through a network of approximately 1,080 miles of transmission lines.

In 1949, the Company embarked on a program of extending its lines to farmers on a co-operative basis. Energy is supplied at the individual meters at 2 cts. per kwh. and the Company also collects from the farmers \$3.50 per month, against which it charges the operating and depreciation costs involved. In effect, the system is constructed and operated at cost for the farmer.

*Northland Utilities Limited.*—This Company, with headquarters at Edmonton, supplies electric energy to 4,450 consumers in 22 northern communities. Diesel generating plants are located at Jasper, Mayerthorpe, Athabasca, High Prairie, McLennan, Peace River and Chauvin. Low-voltage transmission lines extending from these generating stations supply electricity to 120 farms and 13 villages.

In addition to the diesel generating stations, the Company in 1948 constructed a 665 kva. hydro plant on the Astoria River in Jasper National Park for the Department of Mines and Resources. The Company also serves the communities of Dawson Creek, Pouce Coupé and Rolla in the Peace River Block of British Columbia.

*Other Privately Owned Utilities.*—Edmonton generates power from coal and operates its own distribution system; in addition, there is a reciprocal arrangement with Calgary Power, Limited, for exchange of power at peak periods. Calgary, Red Deer, Lethbridge, Macleod, Cardston and Ponoka own their distributing systems but purchase power from Calgary Power, Limited. Medicine Hat owns a power plant and distribution system and furnishes power to the adjacent town of Redcliff. Villages and hamlets beyond the reach of the large utility companies are served by small privately owned power plants.

**British Columbia.**—The British Columbia Power Commission was appointed Apr. 17, 1945, under the provisions of the Electric Power Act, to provide for improving the availability and supply of electric power. In addition to acquiring the electrical equipment of the West Canadian Hydro Electric Corporation, Nanaimo-Duncan Utilities, Limited, Columbia Power Company, Limited, National Utilities, Limited, and the Kamloops properties of British Columbia Electric Railway Company Limited, the Commission has also purchased several smaller privately owned utilities and municipal plants throughout the Province. The latest of these are: Vancouver Island Utilities, Limited, serving nearly 850 customers in the vicinity of Campbell River, and the municipal distribution system serving the city of Courtenay and Comox District with over 1,700 customers, acquired January and April, 1949, respectively.

The Commission's main development on Vancouver Island, the building of a hydro-electric plant—the 'John Hart' development, on Campbell River, designed for an ultimate capacity of 180,000 h.p.,—was officially opened Dec. 15, 1947. The first two units, comprising 50,000 h.p. now supply power to the territory north of Duncan over a 104-mile 132,000 volt double circuit transmission line making electric energy available to industries that are now being attracted to this readily accessible area on Vancouver Island. Power for the southern part of Vancouver Island is to be purchased by the B. C. Electric Railway Company, so that the third

and fourth units, comprising the second 50,000 h.p. block at the John Hart development are already being installed. This phase is expected to be completed by Sept. 30, 1949, and has necessitated the building of a large storage dam enlarging Lower Campbell Lake.

On the mainland another major construction project is under way at Whatshan near the west side of Upper Arrow Lake. This plant in the interior of the Province is designed for an ultimate 60,000 h.p. The first stage of development calls for two 15,000 h.p. units, which are at present under construction and will be in operation in 1951. Power from this plant will be transmitted 75 miles to Vernon in the Okanagan Valley over a 138 kv. line. In addition a 65-mile 63 kv. volt line has been built to connect Vernon with Kamloops on the main line of both transcontinental railways. In this way a large area in the interior of the Province will be served by the Commission through water power.

By April, 1949, the Commission owned and operated 19 generating stations comprising 1 steam plant, 5 hydro plants, and 13 diesel plants. The total rated capacity of these plants was 69,583 kva. Electricity was distributed in 19 distinct power districts and supplied wholesale to one municipality. In 14 of these areas promotional rates have been introduced to "permit and encourage the maximum use of power" as required by the Act. Over 34,000 customers are being served by the Commission at this date. Of this figure nearly 10,000 represent new services installed by the Commission, indicating a considerable extension of service over a three-year period.

Table 22 shows the rapid growth achieved by the Commission from 1947-49.

1947.....	377	870,408	27,665,524	5,750,950	5,936,125

<sup>1</sup> Exclusive of auxiliary equipment.

The predominant position of Quebec in the electric-power field can be seen from the column in Table 24 showing electric energy generated. Of the total power generated in Canada by all central electric stations in 1947, 48 p.c. was generated by privately owned or commercial stations in the Province of Quebec; this percentage decreased from 57 in 1943 as a result of the transfer in 1944 of the Montreal Light, Heat and Power Company and the Beauharnois Power Company to the publicly owned Quebec Hydro-Electric Commission.

All stations in Ontario produce less than one-half as much power as the Quebec stations and only 20 p.c. of the total for Ontario stations is produced by privately owned stations.

\* Revised in the Transportation Division of the Dominion Bureau of Statistics.

#### 24.—Privately Owned Central Electric Stations, by Provinces, 1947

<sup>1</sup> One hydro-electric station in Saskatchewan, which was formerly included with Manitoba, is now shown with Saskatchewan although the power is consumed in Manitoba.

**Newfoundland.**—The Province of Newfoundland, including Labrador, has an estimated potential of over 5,000,000 h.p. of which in 1949 about 5 p.c. had been developed. The available hydro power on the Island alone is placed at well over 1,000,000 h.p.

Abundant even precipitation coupled with a high, wide interior plateau combine to give the Island of Newfoundland the natural requirements for the development of hydro-electric power. Storage capacity is secured from lakes and controlled rivers which hold back from 20 p.c. to 40 p.c. of the yearly flow. The average rainfall is some 44 inches and varies from 58 inches in the more populated Avalon Peninsula to 34 inches in the Northern Peninsula. Approximately 700 rivers flow into the sea but the principal developments are on the Humber (147,000 h.p.), Exploits (80,000 h.p.) and Tor Cove (9,900 h.p.) Rivers. Considerable potential is also available on the Salmon or Bay D'Est, Terra Nova, Grey, White Bear and North Bay Rivers.

Installed turbine capacity at the end of 1948 was nearly 260,000 h.p., 219,400 h.p. of which was utilized by the two leading pulp and paper companies. The balance was distributed among four privately owned companies, the largest being the Newfoundland Light and Power Company with 22,400 h.p. from four plants and the United Towns Electric Company with 16,710 h.p. from eight plants. There are no publicly owned systems.

Frequency used is 60 cycles except in areas served by the pulp and paper companies where 50 cycles prevails with original machinery from England.

A considerable number of home-lighting plants and small generators are in use in most of the scattered outports despite the proximity of water power.

### **Section 3.—Total Development of Electric Power from All Available Sources**

In Section 1 of this Chapter total water-power resources are given with the proportion that has been so far developed. Table 4 of that Section analyses the hydraulic turbine installation by the proportions in central electric stations, in pulp and paper mills, and in other industries. This is useful material, but it does not take into account electric power developed in central electric stations or in other industries from sources other than hydraulic.

Section 2 covers the central electric station industry including those under the public ownership of provincial and municipal governments, and those under private ownership. Neither of these Sections, however, gives a complete presentation of the total electric power developed in Canada. All the hydraulic energy developed is not converted to electric power: there are a number of water wheels and water turbines used for direct drive that are not geared to electric generators. On the other hand, certain central electric stations in the Maritime Provinces and in the Prairie Provinces generate electricity from steam or internal combustion engines. It is the purpose of this Section to show the total electric power generated from all available sources. Most of the power comes, of course, from central electric stations, the figures having been given in Table 5 of Section 2, p. 563. The total kilowatt hours of electric power generated by central electric stations is divided into that generated from water power and that generated from thermal engines of all kinds.

As shown in that table the total electric power generated by central electric stations in 1947 was 43,424,799 kwh. For a complete presentation, the power generated by manufacturing industries for their own use and the power generated by the primary mining industry for use in its own operations must be added. There are a few other sources of electric energy such as electric railways which produced 12,638,100 kwh. during 1947. This production has been taken into the annual totals shown in Table 25. There are numerous small lighting and power plants on farms, rural homes, summer resorts, stores, etc., where electricity from central electric stations is not available and for which there are no available data. The following table gives available data separately and as a combined total. Of the total electric power generated in Canada in 1947, 92.1 p.c. is shown to have been developed in central electric stations and of this 2.4 p.c. was generated by thermal engines (see Table 5, Sect. 2), the remainder having been produced hydraulically. Of the 7.9 p.c. generated by industry for its own use 7.3 p.c. was developed by the manufacturing industries and 0.6 p.c. by the mining industry.

**25.—Total Power Generated by Central Electric Stations, Manufacturing and Mining Industries, 1938-47**

NOTE.—Figures for the years 1927-37 will be found at p. 516 of the 1948-49 edition of the Year Book.

<sup>1</sup> Includes power generated by electric railways for their own use.

## Section 4.—Power Equipment in Canadian Manufacturing and Mining Industries

Table 26 shows the power equipment installed in the manufacturing and mining industries of Canada from 1939 to 1947. The figures for the nine years show that primary power increased from 1,984,077 h.p. to 2,577,252 h.p. or by 30 p.c. while the installation of electric motors operated by purchased power shows an increase of no less than 1,779,284 h.p. In considering the increase in the latter figures, it must be borne in mind that the shift from belts and shafting to individual motors at each machine does not necessarily mean that an amount of power is used equivalent to the increased capacity: there is always a margin by which installed equipment exceeds the simultaneous load.

Of the total primary power installed in 1947, manufacturing establishments accounted for 89 p.c., while of the total electric motors operated by purchased power, manufacturing accounted for 87 p.c. and mining for 13 p.c.

**26.—Power Equipment Installed in Manufacturing and Mining Industries, 1939-47, with Details by Provinces, 1946 and 1947**

NOTE.—For figures prior to 1939 see corresponding tables in previous editions of the Year Book.

**Section 5.—Fuel Used in Canadian Industry**

Fuel is used quite generally throughout the industrial field for the generation of power by means of steam- and internal-combustion engines. It is used also for the heating of plants and for providing the heat necessary to some manufacturing processes. The most important industries where heat is applied to materials to facilitate or accomplish a desired transformation are: foundries; brick, tile, lime and cement works; petroleum refineries; the glass industry; distilleries; food preparation plants; rubber goods industry; etc. The figures of Table 27 cover fuel used for such heating purposes and for power. Fuels that constitute the raw materials to be transformed, such as coal in the coke and gas industries, crude petroleum in the refining industry and electricity used in such metallurgical processes as the electrolytic refining of non-ferrous metals, are not included.

The value of fuel consumed in the manufacturing and mining industries in 1947 showed an increase of 105 p.c. over 1940. Of the 1947 fuel account, the requirements of Ontario amounted to 49 p.c. of the total, of Quebec 28 p.c., of British Columbia 7 p.c. and of Nova Scotia 4 p.c.

Coal is, of course, by far the most important, on the basis of dollar values, of the various kinds of fuels used in industry, and in 1947 accounted for 52 p.c. of the total.

Fuel oil ranks second with 23 p.c. and gas (manufactured gas 9 p.c. and natural gas 1 p.c.) third in importance. Gas as a fuel is particularly important in Ontario. Natural gas is obtained from the southwestern portion of the Province and coal gas from the coke plants of the steel city Hamilton, much as the Province of Quebec draws coal gas from the coke plants at Montreal.

The use of natural gas is also relatively important in Alberta in both manufacturing and mining industries; in fact in the mining industry Alberta used, in 1947, gas which was valued at 43 p.c. of the total value of fuel used in mining operations generally.

The use of fuel oils in industry shows a very rapid rise. Total value of consumption rose from \$10,125,388 in 1939 to \$39,679,170 in 1947.

## 27.—Cost of Fuel Used in Manufacturing and Mining<sup>1</sup> Industries, 1939-47, with Details by Provinces for 1946 and 1947

NOTE.—For figures prior to 1939 see corresponding table in previous editions of the Year Book.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

This Chapter deals with manufacturing industries in Canada in two main Parts. Part I gives general analyses of manufactures including: the historical development of manufacturing in Canada in so far as statistical data are available; production by industrial groups and individual industries, i.e., a detailed treatment of current production under various groupings and individual industries; and general analyses of the principal factors in manufacturing production under such sub-headings as salaries and wages and size of establishment. Part II deals with the provincial and local distribution of manufacturing production.

With regard to the first section of Part I, dealing with growth of manufacturing, it is impossible to give absolutely comparable statistics over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses, and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, while numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions, in so far as possible, back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

The far-reaching influence of the First World War was, of course, the outstanding factor in the growth recorded up to 1939. It was during these years that Canadian manufactures began to develop on a really large scale. Munitions contracts placed by the Imperial Munitions Board in Canada in those years totalled well over \$1,000,000,000 and these did not include such fields of production as shipbuilding and aviation. Shipbuilding construction alone amounted to \$35,000,000\* in 1917, \$75,000,000 in 1918 and \$86,000,000 in 1919. In the same three years employees in the shipbuilding industry numbered 12,000, 22,000 and 25,000, respectively.

\* Revised in the General Manufactures Section, Census of Industry and Merchandising Division, Dominion Bureau of Statistics.

Canada's effort in the Second World War brought manufacturing production to a much higher level than ever before. The tremendous increase in production is indicated by the increases in some of the main factors of production between 1939 and the highest point attained during the War. For manufacturing as a whole there was an increase of 161 p.c. in the gross value of production, 162 p.c. in the value added by manufacture, 89 p.c. in the number of persons employed, and 175 p.c. in the salaries and wages paid.

As was to be expected, the industries producing the munitions and equipment needed by the Armed Forces during the War were the first to feel the effects of the cessation of hostilities. Consequently, the chemicals and allied products group suffered the greatest decline in production as measured by employment, with a drop of 54 p.c. in the number of persons employed since 1944, the last full year of war production. This was followed by the iron and its products group with a drop of 39 p.c.; non-ferrous metal products 19 p.c.; and miscellaneous industries 16 p.c. On the other hand, industries producing food, clothing and other consumer goods reported increases in production. Employment in the wood and paper products group was 18 p.c. higher, followed by an increase of 16 p.c. for non-metallic mineral products, 9 p.c. for animal products, 8 p.c. for textiles and 5 p.c. for vegetable products. Altogether there was a drop of 13 p.c. in the number of employees.

Of the forty leading industries in 1946, a number reported substantial declines in the volume of production as measured by the number of persons employed. Employment in the aircraft industry declined by 68,167 between 1944 and 1946, followed by shipbuilding with a drop of 46,830, miscellaneous chemical products 46,108, miscellaneous iron and steel products 30,862, non-ferrous metal smelting and refining 9,381, scientific and professional equipment 7,618, brass and copper products 7,381, primary iron steel 6,567, automobile supplies 5,018, electrical apparatus and supplies 4,836, etc. On the other hand, employment in the pulp and paper industry increased by 7,071, sawmills 5,836, women's factory clothing 4,153, leather boots and shoes 3,696, printing and publishing 3,134, bread and other bakery products 2,923, hosiery and knit goods 2,002, fish-curing and -packing 1,663, breweries 1,519, etc.

Geographically the percentage changes in manufacturing production between 1944 and 1946 were as follows:—

Province	1946 Compared with 1944			1946 Compared with 1945		
	Number of Employees	Salaries and Wages	Gross Value of Products	Number of Employees	Salaries and Wages	Gross Value of Products

## PART I.—GENERAL ANALYSES OF MANUFACTURING

## Section 1.—Growth of Manufacturing

This Section describes the growth of manufacturing as shown by comparable principal statistics, i.e., establishments, capital, employees, salaries and wages paid, cost of materials, and values of products. Other comparisons are given in Table 4 and consumption figures in Table 5.

## 1.—Historical Summary of Statistics of Manufactures, 1917-47

NOTE.—Statistics from 1870 to 1917 are not on a comparable basis to the series given below. They will be found in Table 1 in former editions. Non-ferrous metal smelting industries were included for the first time in 1925.

Year	Estab- lish- ments	Capital	Em- ployees	Salaries and Wages	Cost of Materials	Net Value of Products <sup>1</sup>	Gross Value of Products

<sup>1</sup> The net value of production is computed by subtracting the cost of fuel and electricity and the cost of materials from the gross value of the products. The figures for 1924 and later years have been revised accordingly; statistics for cost of electricity are not available for years prior to 1924.

<sup>2</sup> A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. Figures from 1931 are, therefore, comparable with those prior to 1925.

<sup>3</sup> Not collected.

The figures in Table 4 trace the tendencies in Canadian manufacturing industries as clearly as possible through the latest period of their development. In analysing statistics of production and materials used, it should be borne in mind that, due to the inflation of values from 1914 through the immediate post-war period and the drop in prices of commodities during the depressions following 1921 and 1930, the figures for these periods are not completely comparable. One very important figure, however, which shows the trend of development clearly, is concerned with the use of power. The total horse-power employed increased from 1,658,475 in 1917 to 7,381,427 in 1947, an increase of about 345 p.c. in 30 years. In the same period, horse-power per wage-earner showed an interrupted trend from 3 to 11 in 1933 and between 9 and 10 in 1939. With the large increase in the number of wage-earners on war production, and the more efficient utilization of the equipment available, the horse-power per wage-earner dropped to 6 in 1944. With the increasing installation of power machinery and the decline in employment after the War, the number of horse-power per wage-earner rose to 8 in 1947. The significant feature is the increase in both the absolute figure of power employed and the averages per wage-earner during the depression years as compared with 1929, although the large numbers of persons again finding employment since 1933 reduced the averages for the years 1934 to 1937 and again for 1940 to 1945. Other interesting comparisons are the trend of value added by manufacture, per employee, and of average salaries and wages paid since 1929.

Averages, per wage-earner.....								

<sup>1</sup> A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. There was, therefore, a proportionate reduction in the averages for 1925-30 per employee and wage-earner, as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

<sup>2</sup> Not collected.

<sup>3</sup> Net values of products; see footnote 1, Table 1.

**Consumption of Manufactured Products.**—Table 5 shows the value of commodities made available for consumption in Canada. The consumption figure is obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods and deducting the value of the exports. More accurate statistics could be presented were it possible to exclude from the gross value of manufactured products the duplications involved when the products of one manufacturing establishment become the material worked upon in another. Iron, vegetable, textile, wood and paper, and animal were, in that order, the leading groups in the value of finished products made available for consumption in 1946. Vegetable, animal, wood and paper, and non-ferrous metal products were manufactured in Canada in greater quantities than required for home consumption; export balances were provided in these groups.

**5.—Value of Consumption of Manufactured Products, 1935-46, and by Industrial Groups, 1946**

<sup>1</sup> Imports and exports of manufactured and partly manufactured goods for the years 1935-38 are as at Mar. 31 of the following years; for 1939-46 they are for calendar years. Net imports are total imports less foreign products re-exported.

**Section 2.—Value and Volume of Manufactured Products**

**Value of Manufactured Products.**—In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind, especially when such variations have been as great as those in the period since the annual Census of Manufactures was begun in 1917. The index number of wholesale prices in Canada, on the 1926 base, compiled by the Dominion Bureau of Statistics, stood at 114·3 in 1917, 155·9 in 1920, 97·3 in 1922, 95·6 in 1929, 67·1 in 1933, 84·6 in 1937, 75·4 in 1939 and 108·7 p.c. in 1946. Index numbers of the

prices of fully or chiefly manufactured goods were: 113.5 in 1917, 156.5 in 1920, 100.4 in 1922, 93.0 in 1929, 70.2 in 1933, 80.5 in 1937, 75.3 in 1939 and 98.8 p.c. in 1946.

**Volume of Manufacturing Production.**—Since real income is ultimately measured in goods and services, the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The index of volume (Table 6) is based on the quantities of manufactured products reported. The industry indexes are weighted according to the values added by manufacture. The weights and products were changed in 1931, 1936 and then again in 1941. By changing the weights and products used in the construction of the index every five years, current changes in production are reflected more accurately.

The physical volume of manufacturing production increased 50 p.c. from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only 11 p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth of population was therefore about 11 p.c. and the increase in exports represented about 4 p.c. The remainder, a margin equal to roughly 35 p.c. of the volume of manufactures of 1923, was, therefore, apparently absorbed by increases in capital equipment and by the rise in the standard of living of the population of Canada.

A similar analysis of the volume of manufactures since 1929 shows that the decline in the depression preceding the Second World War was due chiefly to reduced exports and a cessation in production of capital equipment. As a result of the expansion in production resulting from war demands, the physical volume of production in 1943, when output was at an all-time high, increased by 77 p.c. over 1939 and by 85 p.c. over 1929. In 1946 the index of the physical volume of production at 150.3 represented a drop of almost 20 p.c. from the high mark attained in 1943.

## Section 3.—Production by Industrial Groups and Individual Industries

### Subsection 1.—Manufactures Grouped by Chief Component Materials

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from 15 to 9 to correspond with the external trade classification and the classes of industry were somewhat altered to conform with industrial developments. Subsequently, a number of minor changes were made and revisions due to such changes have been carried back to 1917 as far as possible.

**Changes in Manufacturing Production.**—Table 9 shows the effects of the depression, the recovery since 1933, and the impact of the Second World War and changes since the end of the War upon the main groups of industries with regard to

the numbers employed, the salaries and wages paid, and the gross value of products. Owing to the price decline during the depression, money values of both wages and products were naturally affected more than number of employees. Furthermore, during periods of curtailed production there is a tendency for wage-earners to be put on part time, while the number of salaried employees responds less quickly to reduction in output than that of wage-earners. Therefore, there are several reasons why the variation in number of employees should be less than that of money values. The figures of Table 9 are to be compared with those of Table 6 which shows changes in volume of production. Compared with 1939, the number of employees in 1944 increased by 86 p.c. as compared with an increase of 70 p.c. in the physical volume or production. Salaries and wages paid were 175 p.c. higher and the gross value of production 161 p.c. higher.

Significant changes in the nature of manufacturing production took place after the cessation of hostilities in 1945. Industries engaged in war production curtailed their operations, but industries producing consumer goods increased their production.

### 9.—Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups, Compared for Significant Years, 1929-46

NOTE.—The highest pre-depression year was 1929, while the lowest depression year was 1933.

### Subsection 2.—Manufactures Classified on the Standard Classification Basis

During the War many government departments and agencies collected and compiled the statistics they needed. Inevitably each one adopted a system of classification best suited to its needs. The result was that many statistical series were compiled but, due to differences in classification, none of these series could be correlated or utilized for any purpose other than that originally intended.

In order to provide information of maximum usefulness and to allow for a direct comparison of the different series, an interdepartmental committee was set up to review the different systems of classification in use and to recommend a standard classification which might in future be used by all government departments in their statistical compilations.

Tables 10 and 11 give statistics of the manufacturing industries for 1945 and 1946 on the basis of the standard classification recommended by this committee.

### Subsection 3.—Manufactures Classified by the Purpose of the Products

Significant changes have occurred since 1922 in the importance of the various groups shown in the purpose classification. On the basis of the percentage of gross value of production, the most striking change was in the food group which showed a substantial decline from 28 p.c. of the total in 1922 to 23 p.c. in 1939, 21 p.c. in 1945 and back to 23 p.c. in 1946. The producer materials group, which took

the lead from the food group in 1923, showed a steady increase up to 1939, since when it has remained at about 30 p.c. of the total. Due to the production of war equipment, vehicles and vessels increased from 8 p.c. in 1939 to 13 p.c. in 1945 and dropped again to 8 p.c. in 1946. Industrial equipment rose from 15 p.c. to 16 p.c. The other groups with the exception of "miscellaneous" showed slight declines during the war years.

**12.—Principal Statistics of the Manufacturing Industries, Classified according to Purpose of Principal Product, by Main Groups, Significant Years, 1929-46**

Table 14 has been included in order to give the amount and value of each of the principal commodities produced by the manufacturing industries of Canada. The list is not intended to be complete since a large number of commodities are produced in such small quantities that to include them would extend the table considerably without adding proportionately to its value. The commodities listed, however, cover approximately 75 p.c. of total production.

## Subsection 4.—Manufactures Classified by Origin of the Materials

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber and cotton. Industries included in the Canadian origin classes may, however, be using large quantities of imported materials.

The mineral origin group includes, in addition to the non-ferrous metals, so largely produced in Canada, the manufactures of iron and steel, of petroleum, and of other mineral substances, the raw materials for which are very largely imported. Products of mineral origin, with the exception of fuels, are nearly all durable goods. A high standard of living and advanced industrial organization is usually indicated

by a relatively large production and consumption of mineral products. During periods of depression when the production of capital goods is curtailed, employment in the industries of the farm group, which produce mainly consumer goods, exceeds that of the mineral group. The industries of the mineral group in 1943 had by far the greatest capital investment, employed the largest number of persons, and paid out the highest amount in salaries and wages. In 1943 the average capital per employee amounted to \$5,441 for the mineral group as compared with \$4,417 for the farm origin group. The mineral group also pays the highest wages. In 1946 the average salary and wage was \$1,861 for the mineral group and \$1,467 for the farm origin group.

Subsection 5.—Manufactures Classified by Type of Organization

For the first time the Dominion Bureau of Statistics has made a study of the type of organization under which Canadian manufacturers operate, and results for 1946 are published in this Subsection.

Of the 30,663 establishments included in this study, 14,581 or 48 p.c. were under individual ownership, 4,920 or 16 p.c. were partnerships, 10,209 or 33 p.c. were incorporated companies and 953 or 3 p.c. were co-operatives.

As is to be expected, smaller establishments, regardless of the type of products manufactured, are carried on under individual ownership. Industries conducted on a small scale contain a large number of establishments in this category, the percentage decreasing as the scale of operations increases, as shown in the following statement:—

<i>Group</i>	<i>Average number of Employees per Establishment</i>	<i>Percentage of Individual Ownership Establishments to the Total</i>
Wood and paper products.....	18.7	58.6
Vegetable products.....	23.1	60.4
Animal products.....	23.2	40.2
Miscellaneous industries.....	30.4	37.3
Chemicals and allied products.....	36.7	21.0
Non-metallic mineral products.....	40.1	32.7
Textiles and textile products.....	53.5	28.0
Iron and its products.....	105.7	25.1
Non-ferrous metal products.....	114.7	22.3
ALL GROUPS.....	34.1	47.6

The establishments operating under individual ownership are not as important from the point of view of employment provided as their large numbers would indicate. According to Tables 16 and 17, these establishments, which comprised 48 p.c. of the total, had only 8 p.c. of the total employees; partnerships accounted for 16 p.c. of the number of establishments and 5 p.c. of the total employees; incorporated companies 33 p.c. of the number of establishments and 86 p.c. of the employees; and co-operatives 3 p.c. of the establishments and 1 p.c. of the employees.

#### 16.—Percentage Distribution of Manufacturing Establishments, Classified by Type of Organization, by Provinces and Industrial Groups, 1946

Province or Group	Individual Ownership	Partnerships	Incorporated Companies	Co-opera- tives	Total
	p.c.	p.c.	p.c.	p.c.	p.c.
<b>Province</b>					
Prince Edward Island.....	58.4	16.3	19.7	5.6	100.0
Nova Scotia.....	59.4	16.4	23.2	1.0	100.0

**Subsection 6.—Leading Manufacturing Industries**

In the following statement, the rank of the ten leading industries in 1946, from the standpoint of gross value of production, is compared with their respective ranks in significant years since 1922.

Industry	Rank in—							
	1946	1945	1944	1939	1937	1933	1929	1922
Pulp and paper.....	1	2	5	2	2	1	1	2
Slaughtering and meat packing.....	2	1	1	3	3	3	2	3
Non-ferrous metal smelting and refining...	3	3	2	1	1	2	9	1
Sawmills.....	4	5	11	8	7	14	5	4
Flour and feed mills.....	5	8	12	7	5	4	3	1
Butter and cheese.....	6	9	10	4	6	5	6	5
Electrical apparatus and supplies.....	7	6	8	9	8	16	8	17
Petroleum products.....	8	11	14	6	9	6	10	9
Automobiles.....	9	7	7	5	4	11	4	6
Clothing, women's factory.....	10	16	21	17	16	10	17	16

<sup>1</sup> Did not rank among 40 leading industries in 1922.

A prominent feature of Canadian manufacturing development during the past 20 years has been the rapid growth of non-ferrous metal smelting. This industry, based upon the rich base metal resources of the country, has now taken its place among the leading manufactures along with the industries based upon forest, agricultural and live-stock resources. The incidence of the depression resulted in a rearrangement in the ranking of many industries; in some cases this has proved to be temporary. In 1945, the industries engaged in the production of consumers' goods, by reason of the heightened demand for their products, improved their position. Pulp and paper after a lapse of a number of years resumed its premier position. Another notable feature in 1946 was the advance of petroleum products from eleventh to eighth place, and the reappearance of the women's factory clothing industry in tenth place. Slaughtering and meat packing dropped from first to second place and automobiles from seventh to ninth place.

## 19.—Principal Statistics of the Forty Leading Industries, Ranked according to Gross Value of Products, 1916

Industry	Estab- lish- ments	Em- ployees	Salaries and Wages	Cost of Materials	Net Value of Products	Gross Value of Products
	No.	No.	\$	\$	\$	\$
1 Pulp and paper.....	113	44,967	101,364,636	223,448,338	258,164,578	527,814,916

## Section 4.—Principal Factors in Manufacturing Production

The subjects treated under this Section include salaries and wages and size of establishments.

### Subsection 1.—Capital Employed

The collection of statistics on capital invested in manufacturing industries was discontinued in 1944. However, figures for each year from 1917 to 1947 are given in Table 1 of this Chapter, and by provinces for significant years of the same period in Table 2. A table showing the forms of capital employed for certain years from 1924 to 1943 is given at p. 417 of the 1946 Year Book.

## Subsection 2.—Employment in Manufactures

Statistics of earnings and hours of work of wage-earners and salaried employees in manufacturing will be found in the Chapter on Labour, pp. 687-692.

## Subsection 3.—Salaries and Wages in Manufacturing Industries

In 1946 the 31,249 establishments covered employed 181,006 salaried employees and 877,150 wage-earners, a total of 1,058,156 persons. Out of every 1,000 persons employed in manufacturing, 171 were classed as salary-earners and 829 as wage-earners; the former earned 24 p.c. and the latter 76 p.c. of the total amount paid out as remuneration for services.

A notable feature during the past few years was the reduction in the disparity between average annual salaries and wages. Whereas in 1939 average annual wages were only 56 p.c. of average annual salaries, in 1943 the percentage rose to 76 and declined to 67 in 1946. This tendency towards equalization was, in part, due to the controls adopted by the Government during the war years which tended to stabilize salaries more than wages. The increase in average wages was also influenced by the fact that large numbers of wage-earners were employed in the highly paid iron and steel industries and by the increase in number of hours worked, some of which were at overtime rates of pay.

## 21.—Salaries and Wages Paid in Manufacturing Industries, Significant Years, 1917-46

Year	Salaries				Wages			
	Salaried Employees		Total Salaries	Average Salaries	Wage-Earners		Total Wages	Average Wages

<sup>1</sup>The averages of wage-earners and earnings for the years 1931 to 1945 are strictly comparable with those for the years up to 1925 but not with those for the intervening years. The figures for the latest years—as for the earliest—represent the earnings for complete man-years of work, with no allowance for periods of unemployment. The difference amounts to only 3 or 4 p.c. in the total figures and affects chiefly the seasonal industries.

<sup>2</sup>The increase in the number of salaried employees in 1931 is due to the following changes in method: (1) Prior to 1931 working proprietors, such as bakers, sawmill operators, small clothing manufacturers, etc., were required to report themselves as wage-earners. In 1931 and subsequent years, however, all such proprietors reported themselves as salaried employees. (2) In 1931 travelling salesmen who were attached to the plant, and devoted all or the greater part of their time to selling the products of that plant, were included with salaried employees. Prior to this they were not reported at all.

Ontario has a larger proportion of females among its salaried employees than the other provinces. The same situation prevails in Quebec with regard to wage-earners, due, no doubt, to the textile industries of the Province. The importance of the textile industries in providing employment for females is strikingly illustrated by the fact that of all female wage-earners engaged in the manufacturing industries of Canada in 1946, 40 p.c. were found in the textile group.

The average salary in 1946 amounted to \$2,270 which was \$524 or 30 p.c. higher than in 1939. Employees in Ontario received the highest average salary at \$2,356. Quebec was second at \$2,297, British Columbia third at \$2,200 and Manitoba fourth at \$2,090. The fact that head offices of many large corporations are located at Montreal, Toronto, Winnipeg and Vancouver tends to raise the average salaries in the provinces in which these cities are located.

The average wage in 1946 amounted to \$1,516 which was \$541 or 55 p.c. higher than in 1939. The manufacturing industries of British Columbia paid the highest average wage of \$1,750, followed by Ontario with \$1,552, Manitoba \$1,491, Alberta \$1,477, Saskatchewan \$1,455, Quebec \$1,445, etc. The high figures shown for Yukon and Northwest Territories in regard to average wages are due to the unusual conditions under which industry is carried on in these regions and are not representative. Statistics of the distribution of employees by provinces and groups as well as average annual earnings are given in Table 22.

## 22.—Salaries and Wages Paid in Manufacturing Industries, by Provinces and Industrial Groups, 1946

**Annual Earnings in the Forty Leading Industries.**—In only two industries, breweries and pulp and paper, were average salaries above \$3,000. In fourteen others they ranged between \$2,500 and \$3,000. These industries, in descending order, were: automobiles, primary iron and steel, non-ferrous metal smelting and refining, silk and artificial silk, petroleum products, woollen cloth, men's factory

clothing, women's factory clothing, shipbuilding and repairs, railway rolling-stock, cotton yarn and cloth, brass and copper products, boxes and bags, paper, and automobile supplies. In sixteen others they ranged between \$2,000 and \$2,500, while in the remaining eight they were below \$2,000. The sawmill and butter and cheese industries, with \$974 and \$1,363, respectively, were the lowest paying industries in this category.

The highest annual wages, those above \$1,800, were paid in nine industries, in all of which the proportion of skilled workers was high and the proportion of female workers low. The pulp and paper industry with \$2,113 was the highest in this group, followed by aircraft with \$2,015, primary iron and steel \$1,998, non-ferrous metal smelting and refining \$1,980, railway rolling-stock \$1,979, shipbuilding \$1,957, petroleum products \$1,937, automobiles \$1,814 and breweries \$1,814. In thirteen other industries average wages ranged between \$1,500 and \$1,800, in eleven others they were \$1,200 to \$1,500, while in the remaining seven they were below \$1,200. This latter group included industries made up of a large number of small establishments and in which the proportion of female workers was high including: paper boxes and bags, fish-curing and -packing, leather boots and shoes, men's factory clothing, biscuits and confectionery, hosiery and knit goods, and fruit and vegetable preparations.

**23.—Salaries and Wages Paid in the Forty Leading Industries, 1946, with comparative figures of Average Salaries and Wages Paid in 1945**

NOTE.—Industries are ranked according to the aggregate salaries and wages paid.

<sup>1</sup> Average salaries and wages paid in the forty leading industries in 1945. The list of leading industries in that year was not quite the same as the list for 1946.

**Average Annual, Weekly and Hourly Earnings.**—In comparing earnings by provinces or groups, consideration should be given to the type of industries in each case since the distribution of industries has very definitely a regional significance. In some industries a labour force possessing deftness and speed or the ability to exercise muscular strength is necessary, in others the labour force must exercise craftsmanship or possess a high degree of technical knowledge. Workers in these latter industries naturally command relatively higher wages than those employed in industries whose employees are routine workers. The ranking of provinces and industries as regards annual earnings is, in many cases, different from that of weekly or hourly earnings since the factors of number of weeks worked per year and number of hours worked per week are taken into consideration.

The figures for the years 1938 to 1945 given in Table 24 are based on an analysis of a pay-list covering one week in the month of highest employment. For this reason the figures do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the different months of highest employment as reported by all the firms. For a particular industry, however, the month of highest employment is more significant as in such case it coincides for a great number of firms engaged in the same industry. The figures for 1946 in Tables 24 to 26 are based on returns received from establishments employing 15 hands or over and refer to the last week in the month of November.

Average weekly earnings of male wage-earners for manufacturing as a whole amounted to \$36.23 in 1946, an increase of \$14.00 or 63 p.c. as compared with 1939. Average hourly earnings advanced from 46.2 cents in 1939 to 80.7 cents in 1946, an increase of 74 p.c. Annual earnings at \$1,702 were 58 p.c. higher.

Female wage-earners received on an average \$20.08 per week in 1946, an increase of \$7.30 or 57 p.c. as compared with 1939. Hourly earnings at 50.2 cents were 77 p.c. higher, while annual earnings at \$943 were 52 p.c. higher.

#### 24.—Average Annual, Weekly and Hourly Earnings of Male and Female Wage-Earners in the Manufacturing Industries, 1938-46

NOTE.—Butter and cheese factories and fish-curing and -packing plants are excluded in the years 1938 to 1945, while sawmills are also excluded in 1945.

**Real Earnings of Employees.**—When the index number representing the average yearly wages is divided by the index number of the cost of living, on the same base, a measure of “real” wages is obtained. Index numbers for 1937 to 1946 are given in Table 27. In 1933, the lowest point of the depression, real wages were 88.3 on the 1935-39 base. From then they rose steadily and stood at 141.1 in 1944, an increase of about 60 p.c. In 1946 real wages dropped to 131.6.

**27.—Average Yearly Earnings and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners in Manufacturing Industries, 1937-46**

NOTE.—Figures for 1931-36 are given at p. 581 of the 1948-49 Year Book.

**Percentages of Salaries and Wages to Net Value of Products.**—Table 28 shows the relation between salaries and wages paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of salaries and wages, interest, rent, taxes, repairs, and all other overhead charges that ordinarily must be met. The percentage declined steadily with the increasing manufacturing production from 1924 to 1929, while from 1931 to 1935 and again in 1938 and 1939, due to decreased industrial activity, the percentage of salaries to value added was above normal. It should be borne in mind, however, that salaried employees increased 159 p.c. during the period 1924-46

while wage-earners increased 110 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be more rapidly adjusted to the activity of the industry and wage levels likewise may be more readily adjusted to the price levels of the products. Of the increase in the net value of production since 1939 amounting to \$1,935,953,079, 52 p.c. was passed along in increased salaries and wages.

**28.—Percentages of Salaries and Wages Paid to the Net Values of Manufacturing Production, 1937-46**

<sup>1</sup> Equivalent to "net value of products"; see footnote 1, Table 1, p. 592.

**Subsection 4.—Size of Manufacturing Establishments**

The size of the manufacturing establishment is generally measured either by the value of product, or by the number of employees, but each of these methods has its limitations. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery, as in the flour-milling industry, may lead to an increase in production concurrently with a decrease in number of employees. The former measure has to be adjusted for changes in the price level and, as between industries, it makes those in which the cost of raw materials is relatively high, appear to operate on a larger scale.

**Size as Measured by Gross Value of Products.**—While in 1922 the 420 establishments each producing over \$1,000,000 had an aggregate value of products of \$1,268,056,129 or 51 p.c. of the total production of all manufacturing industries, the 719 establishments producing over \$1,000,000 each in 1929 had an aggregate value of products of \$2,516,064,954, or 62 p.c. of the grand total for all manufacturing establishments—a very significant change in the short period of eight years. In 1931, however, the number of plants with a production of over \$1,000,000 dropped again to 482, their output being valued at \$1,451,658,954, or 53 p.c. of the total. Resulting from increased war production, the number of plants with a production of \$1,000,000 or over jumped to 1,376 in 1944 and their output was about 75 p.c. of the total value of manufactures. The number of establishments with a production of \$1,000,000 or over, although increasing to 1,442 in 1946, nevertheless saw a decline in the proportion of their output to 67 p.c. of the total.

of Yukon and the Northwest Territories.

<sup>2</sup> Exclusive

**Size as Measured by Number of Employees.**—In 1923, establishments employing 501 hands or over accounted for 21 p.c. of the total number of employees engaged in manufacturing. By 1929 the proportion increased to 27 p.c. of the total, thereby showing the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage dropping in 1933 to 20 p.c. (central electric stations included). With the recovery in production since 1933 the percentage rose again, and in 1939 stood at almost 26. The same held true for establishments employing 101 hands or over. In 1923 they employed nearly 59 p.c. of the total, in 1929, 62 p.c., in 1933, 56 p.c., and in 1939, 62 p.c.

The concentration of war industries into large units is illustrated by the increase in the number of establishments employing 500 hands or over. In 1939 such establishments numbered 172 and employed almost 26 p.c. of the total number of employees engaged in manufacturing. By 1944 the number had increased to 383 and the percentage of total employees to 47. A further subdivision of this group in 1944, shows that 226 establishments employed between 500 and 999 persons, 56 between 1,000 and 1,499, and 101 employed over 1,500. Altogether there were 12 plants employing over 7,000 persons. The largest one had an employment of a little over 13,000 with the next three largest employing between 9,000 and 10,000. Three other plants employed between 8,000 and 9,000 persons while the lowest five plants in this group employed between 7,000 and 8,000 workers.

In 1946 the size of establishment declined. Those employing 1,500 or over numbered only 55 as compared with 100 in 1944 and 80 in 1945. The largest manufacturing plant in Canada which employed over 13,000 persons in 1944 employed

about 12,000 in 1946. The next two largest establishments employed over 7,000 persons while the fourth had over 6,000 persons. The following statement gives the size distribution of the highest group in 1946:—

<i>Employees</i>	<i>Establishments</i>
Over 6,000.....	4
5,000 to 6,000.....	—
4,000 to 5,000.....	2
3,000 to 4,000.....	5

**Size of Establishment in Leading Industries.**—Table 32 summarizes the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the case of automobiles, railway rolling-stock, non-ferrous metal smelting and refining, rubber goods, cotton yarn and cloth, pulp and paper, and primary iron and steel; whereas in the case of bread and other bakery products, sawmills, miscellaneous foods, fish-curing and -packing, butter and cheese, and women's factory clothing, the degree of concentration is low.

**32.—Percentage Importance of Establishments, each Employing 200 or more Persons in the Twenty-Five Leading Industries, 1946**

## PART II.—PROVINCIAL AND LOCAL DISTRIBUTION OF MANUFACTURING PRODUCTION

### Section 1.—Provincial Distribution of Manufacturing Production

Ontario and Quebec are by far the most important manufacturing provinces, their combined production in 1946 amounting to \$6,252,495,222 or 78 p.c. of the gross value of manufactured products of Canada. The proximity of Ontario to the coalfields of Pennsylvania, the water power and other varied resources of the two provinces, and their nearness to the larger markets of Canada and the United States have all contributed to their progress.

Table 1 shows the outstanding predominance of Ontario and Quebec in each industrial group. Quebec leads in the manufacture of textiles, but in each of the other groups Ontario has the greater production. The standing of these two Provinces is most nearly approached by British Columbia in the case of the wood and paper products group, where the latter Province accounts for 16 p.c. of the gross production compared with 36 p.c. for Ontario and 36 p.c. for Quebec.

The degree of concentration of manufacturing production in large units is illustrated in Table 2. In the Province of Quebec 35 p.c. of all persons engaged in manufacturing were employed in establishments having 500 or more employees, as compared with 32 p.c. for Canada as whole. Ontario ranked second with 34 p.c., followed by Nova Scotia with 32 p.c., New Brunswick 26 p.c., Manitoba 24 p.c., British Columbia 23 p.c., Alberta 14 p.c., and Saskatchewan 9 p.c. There were no plants in Prince Edward Island employing 500 or more persons.

### 2.—Concentration of Manufacturing Production in the Provinces, 1946

<b>Totals.....</b>	<b>311</b>	<b>1.0</b>	<b>32.3</b>

### Subsection 1.—The Manufactures of the Maritime Provinces, 1946

In Prince Edward Island the predominant agricultural and fishery resources make butter and cheese, and fish-curing and -packing, the leading manufactures of the Province. Nova Scotia is renowned for its coal mines and its fisheries, as well as extensive forests and agricultural lands and is favoured with easy access by sea to the high-grade iron-ore supply of Newfoundland. On these resources are based the leading manufactures of primary iron and steel, shipbuilding and repairs, fish-curing and -packing, sawmills, pulp and paper, and butter and cheese. In addition to this, important petroleum refineries and coke and gas plants add to the diversification of manufacturing in the Province. The forests of New Brunswick give a

leading place to its pulp and paper and sawmilling industries, although fish and agricultural products add to the varied output. Sugar refining and the production of railway rolling-stock also form important branches of manufacturing production.

<sup>1</sup> Individual statistics cannot be given because there are fewer than three establishments in each industry. Such industries are: in Prince Edward Island, starch and glucose, castings and forgings, sheet metal products, fertilizers, cotton and jute bags; in Nova Scotia, cotton yarn and cloth, miscellaneous iron and steel products, wire, coke and gas, and petroleum; in New Brunswick, sugar refineries, railway rolling-stock, cotton yarn and cloth, silk and artificial silk goods, and veneer and plywoods, breweries, shipbuilding, and brooms, brushes and mops.

## Subsection 2.—The Manufactures of Quebec, 1946

Among the assets of Quebec that have tended to develop manufacturing industries in the Province may be mentioned its natural resources of forests, water powers, minerals, agricultural lands, and its geographic position astride the St. Lawrence estuary permitting sea-going shipping to reach its main centres of population. Added to these natural advantages, there is a stable and industrious population, which is an important factor in industries such as textiles, clothing, boots and shoes, etc., where a large labour force is required.

The most notable change among the manufactures of Quebec in recent years has been the development of the non-ferrous metal smelting industry. This industry first appeared among the forty leading industries of the Province in nineteenth place in 1927. It has been in second place since 1935, with the exception of 1942 when it was in first place.

Quebec with about 31 p.c. of the total Canadian output in 1946 was the second largest manufacturing province. The production of pulp and paper again occupied the premier position which was held during 1942 by non-ferrous metal smelting and refining and in 1943 and 1944 by miscellaneous chemical products. In addition to accounting for about 11 p.c. of the gross value of Quebec manufactures in 1946 the pulp and paper industry furnished about 50 p.c. of the Canadian total for this industry. The value of tobacco products totalled approximately 89 p.c., cotton yarn and cloth 71 p.c., women's factory clothing 68 p.c., silk 68 p.c., leather boots and shoes 65 p.c., men's factory clothing 59 p.c., railway rolling-stock 54 p.c., fur goods 48 p.c., and hosiery and knit goods 41 p.c. Quebec is thus an outstanding manufacturing province by reason of large individual industries and not so much on account of a great diversification of manufacturing activity.

## 4.—Statistics of the Leading Industries of the Province of Quebec, 1946

<sup>1</sup> Sugar refining is also one of the leading industries but statistics for that industry cannot be published.

## Subsection 3.—The Manufactures of Ontario, 1946

The gross value of the manufactured products of Ontario in 1946 represented about 47 p.c. of the total for Canada. This premier position in manufacturing has been fairly uniformly maintained, as the following percentages show: 1926, 52 p.c.; 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c.; 1890, 51 p.c.; and 1880, 51 p.c. In spite of the rapid industrial development in recent years in other provinces, such as Quebec, British Columbia and Manitoba, Ontario is maintaining a manufacturing production roughly equal to that of the remainder of the country.

The geographic position of Ontario on the Great Lakes waterway system, by means of which the iron ore of Minnesota and the coal of Pennsylvania are readily accessible, the wide range of natural resources of forests, minerals, water powers and agriculture, a large population and excellent water and rail transportation facilities to other parts of the country, have all encouraged industrial development. Other factors have been proximity to one of the most densely populated sections of the United States and the establishment within the Province of branch factories of United States industries, such as automobile manufacturing.

Industries producing capital or durable goods, which constitute an important factor in the manufactures of Ontario, were particularly hard hit during the early years of the depression preceding the Second World War. Thus, production was disproportionately curtailed in such important industries as automobiles, electrical equipment, machinery, agricultural implements, and primary iron and steel. This resulted in a lowering of the manufacturing production of the whole Province relative to that of other provinces less affected by these influences. With the recovery since 1933 and the expansion in production resulting from the Second World War these industries in general have made good recovery, and Ontario, which accounted for 49 p.c. of the gross value of all products manufactured in Canada in 1933, had by 1942 increased the relative value to nearly 51 p.c. In 1946 the percentage dropped again to 47, indicating a relatively greater expansion of production in other provinces.

Ontario also has the greatest diversification of manufacturing production of any province. Outstanding among the industries in which this province is pre-eminent are those of automobiles, agricultural implements, starch, bicycles and carpet manufacture which are carried on almost exclusively in this Province. Other important industries in which Ontario leads, with the percentage which the production of each bore to that of the Canada total in 1946, are as follows: abrasives 87, miscellaneous non-ferrous metal products 86, leather tanneries 86, soap and washing compounds 85, rubber goods 82, cordage, rope and twine 81, clay products from imported clay 78, primary iron and steel 75, woollen yarn 73, electrical apparatus and supplies 73, aluminum products 73, salt 68, toilet preparations 61, coke and gas products 59, acids, alkalies and salts 56, flour and feed 54, hosiery and knit goods 53, furniture 50, and glass and glass products 50.

### Subsection 4. —The Manufactures of the Prairie Provinces, 1946

The leading industries of the Prairie Provinces are those based on their agricultural resources—grain-growing, cattle-raising, and dairying areas. Next in importance, generally, are industries providing for the more necessary needs of the resident population, such as the baking of bread, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area. The widespread use of motor-vehicles and power machinery on farms has given rise to petroleum refineries in each province. The greatly increased production of crude petroleum in Alberta seems likely to lead to further development of the refining industry. Manitoba, as the early commercial centre of the prairies, has had a greater industrial development than either of the other provinces. Its natural resources of accessible water powers, forests and, more recently, minerals, have given rise to a diversification of industrial production.

Considering the Prairie Provinces as an economic unit, slaughtering and meat packing had the largest gross value of production in 1946, amounting to \$211,887,820, followed by flour and feed mills with \$91,168,034, butter and cheese \$57,039,341, and petroleum products \$43,889,825. These four industries accounted for 52 p.c. of the total production of the Prairie Provinces. Other leading industries, in the order named, were: railway rolling-stock, breweries, bread and other bakery products, sawmills, printing and publishing, etc.

<sup>1</sup> Other leading industries, individual statistics for which cannot be given because there are fewer than three establishments in each industry are: Manitoba, non-ferrous metal smelting and refining and pulp and paper; Saskatchewan, non-ferrous metal smelting and refining, cotton and jute bags, and wood preservation; Alberta, cement, wood preservation, malt and malt products, sugar refineries, processed cheese, fertilizers, and bridge and structural steel.

## Subsection 5.—The Manufactures of British Columbia, 1946

British Columbia with a gross value of production of \$644,527,898 in 1946 was again the third most important manufacturing province in Canada. About 20 p.c. of this amount was contributed by the sawmilling industry. Shipbuilding was in fourth place, having occupied first place during the war years. At the height of its productive effort in 1943 this industry employed 31,238 persons, paid \$64,939,484 in salaries and wages, and the value of production reached the unprecedented figure of \$155,536,396. In 1946 the shipbuilding industry was still the second largest employer of labour and paid out the second highest amount in salaries and wages. Emphasizing the importance of the forests in the industrial life of the Province, the sawmilling industry ranked first in 1946 with a gross value of production of \$130,433,625, and the pulp and paper industry third with \$42,030,596; second in importance was fish-curing and -packing, based principally on the estuarial salmon

fisheries. British Columbia accounted for 43 p.c. of the total production of this industry in Canada. Other important industries are: shipbuilding, slaughtering and meat packing, fruit and vegetable preparations, fertilizers, butter and cheese, petroleum products, veneer and plywood, etc. The varied resources of the Pacific Coast have resulted in a wide diversification of its manufactures.

<sup>1</sup> Includes distilleries and non-ferrous metal smelting.

## Section 2.—Manufacturing Industries in Urban Centres

The prosperity of most of the cities and towns of Canada, especially in the east, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the west the cities are more largely distributing centres, though manufactures are rapidly increasing.

Table 8 indicates the extent to which the manufacturing industries of Canada are concentrated in urban centres. It shows by provinces the proportion of the gross manufacturing production contributed by urban centres having a gross production of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns in 1946 accounted for 94 p.c. and 92 p.c., respectively, of the totals for those provinces, while in the Maritime Provinces and British Columbia, where sawmilling, fish-packing, and dairying are leading industries, the proportions fell to 67 p.c. and 66 p.c. respectively. In the Prairie Provinces manufacturing is confined largely to a few urban centres.

**8.—Cities and Towns each with a Gross Manufacturing Production of over \$1,000,000, Number of Establishments and Total Production in such Urban Centres as a Percentage of the Grand Total, by Provinces, 1946.**

Note.—Statistics published in this table are in some cases higher than the figures published in Table 11, since, in the table below are included statistics of towns with less than three establishments and production of over \$1,000,000 each. It was not possible to publish this information, except in summary form, in Table 11 without disclosing the operations of individual establishments.

Province or Territory	Urban Centres with a Gross Production of over \$1,000,000 each	Establishments Reporting in Urban Centres Producing over \$1,000,000 each	Total Production in Urban Centres Producing over \$1,000,000 each	Total Production in each Province	Production in Urban Centres as a Percentage of Total Production in each Province

## CHAPTER XVIII.—CONSTRUCTION

### CONSPECTUS

	PAGE		PAGE
SECTION 1. THE GOVERNMENT AND THE CONSTRUCTION INDUSTRY.....	647	SECTION 2. CONSTRUCTION OF DWELLING UNITS IN CANADA.....	652
Subsection 1. Public Contracts.....	647	SECTION 3. CONTRACTS AWARDED AND BUILDING PERMITS ISSUED.....	653
Subsection 2. Government Aid to Civil Housing.....	649	SECTION 4. ANNUAL CENSUS OF CONSTRUCTION.....	659

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The purpose of this Chapter is to co-ordinate such official statistics on the construction industry as are available and to give, as far as possible, a complete picture of construction from year to year. Official statistics, although constantly undergoing improvement, have many gaps and it is necessary to try to bridge these by presenting data from outside sources. For instance, Section 3 carries official figures of building permits issued in leading cities. These figures are useful but have definite limitations and are supplemented by presenting data from outside sources. This Section also contains data from a private source on construction contracts awarded during specified years. These are in the nature of a forecast of the amount of construction work contemplated in a given year. It is usually some time after contracts are awarded that work actually starts and, in the case of contracts of large-scale undertakings, the work is seldom finished within one year.

On the other hand, the official statistics of the annual Census of Construction given in Section 4 cover work of all kinds actually completed in a given year but even the Census of Construction is not all-inclusive. Work done by farmers, which in the aggregate must be considerable, is not included nor is much of that done by railways and other public institutions. So far as the latter groups are concerned an attempt is made in Section 4 to calculate a net figure which, when added to the annual Census of Construction figure, will more nearly approximate total construction (except that done by farmers and other individuals for themselves).

### Section 1.—The Government and the Construction Industry

#### Subsection 1.—Public Contracts

Previous to the Second World War, Federal Government contracts were let and put into execution by the Department of Public Works. During the War, the Department of Munitions and Supply was organized to co-ordinate the industrial effort and arrange priority for such industries as were engaged in important war work. After 1946, the Department of Munitions and Supply gave place to the Department of Reconstruction and Supply and since that date Government reconstruction programs, so far as they concern construction projects, have been screened by this body which works in close co-operation in this matter with the Department of Public Works and other Federal Departments concerned. This ensures the initiation of only those new projects which do not interfere with more necessary construction in progress or contemplated, and where availability of labour and materials permits.

Following the Government's announcement in November, 1947, of stringent measures for the conservation of its dollar resources, all government departments have to report in detail to the Department of Reconstruction and Supply their probable purchases of materials, machinery or equipment from the United States.

**Trans-Canada Highway.\***—The Federal Government in December, 1948, invited all provinces to send representatives to attend a Trans-Canada Highway Conference at Ottawa. At this Conference, all provinces indicated they were in favour of the project.

Considerable progress was made in 1949 in preparing the ground generally for the introduction of federal legislation, and for the signing of the agreements with the provinces.

At present Canada is without a national coast-to-coast highway although 4,200 miles of road link together Halifax and Vancouver. Of the existing road approximately 60 p.c. is paved but much of that paving is below standard. The expansion of the Canadian economy has created an increasing need for a transcontinental all-weather road, the cost of which has been set at about \$300,000,000. Legislation passed in 1949 enables the Federal Government to provide the Provincial Governments in the next seven years with assistance to the amount of \$150,000,000 for the construction of the Highway. This legislation visualizes the Highway as extending beyond the Pacific mainland to Vancouver Island and from the Atlantic mainland to Cape Breton Island, Prince Edward Island and Newfoundland.

Technical data and other information were obtained about local conditions in each province and an outline of proposed standards and suggested terms of agreement was forwarded to all provinces, asking for assurance that they were prepared to co-operate in the project. These assurances were given.

A technical conference, attended by representatives of all provinces, met at Ottawa on Dec. 15-16, 1949, at which general agreement was reached respecting standards and specifications.

The Federal Government is also sharing the costs of highways already constructed which will be taken into the Highway plan, paying one-half of the total cost of construction of such highways. The federal contribution toward the Highway remaining to be completed will therefore be considerably more than the 50 p.c. set out in the enabling legislation. Payments for roads already constructed may be applied elsewhere in provincial highway systems as determined by the provinces to which the payments are made.

The Federal Government contribution will be limited to the two-lane standard. A paved surface of 22 ft. in the Eastern Provinces and 24 ft. west of the Great Lakes has been agreed on as standard, with a minimum right-of-way of 100 ft., wherever possible. Maximum curvature of 8° and maximum gradients of 6 p.c. have been decided on, together with sight distances horizontally and vertically of 600 ft. minimum.

The route will be approximately 5,000 miles in length, following the shortest practical east-west route and comprising a "first-class, hard-surfaced, two-lane highway". Except for those portions in National Parks, the Highway will become the property and responsibility of the provinces and will be constructed over routes which they have chosen and will be maintained by them.

---

\* Prepared by H. G. Cochrane, Department of Reconstruction and Supply, Ottawa.

**Subsection 2.—Government Aid to Civil Housing\***

Canada's supply of adequate housing falls short of actual needs. While this condition undoubtedly existed prior to 1930, it was not widely recognized. With the general depression of economic activity through the period 1929-36, residential construction fell to such a low level that already-existing overcrowding and obsolescence were further aggravated. The high vacancy rate in these years, particularly for apartment dwellings, was a product not of an over-supply of dwellings, but of enforced 'doubling-up' of families whose incomes were not sufficient to provide separate living quarters.

The construction industry had not recovered from this slump when in 1939 war production began to drain off materials and labour required for wartime housing construction. During the war years, increased personal income allowed many families to expand into separate or larger dwelling units. These two factors, coupled with unprecedented high marriage rates during the war years and months immediately following, aggravated an already critical shortage of living quarters.

The tempo of total residential construction, including Government projects, has increased steadily in post-war years. During 1948, 81,243 new dwelling units were completed making a total of 276,516 units in the four years since the War. These figures include dwelling units added by conversion of existing structures.

**The Central Mortgage and Housing Corporation.**—To provide co-ordination in the housing field, the Central Mortgage and Housing Corporation was incorporated by an Act of Parliament (December, 1945). Briefly, its purpose and functions are: (1) to administer the National Housing Act, 1944, and earlier housing legislation; (2) to provide facilities for the rediscounting of mortgages by lending institutions; and (3) to administer the Emergency Shelter Regulations.

In 1947, the Corporation assumed supervision of the activities of Wartime Housing Limited, a Crown Company formed in 1941 (see pp. 582-583, 1947 Year Book).

During the years 1941-48, 38,126 new housing units were completed by Wartime Housing Limited and the Central Mortgage and Housing Corporation and an additional 2,158 were completed in the first quarter of 1949.

In September, 1947, the Corporation also became responsible for the management of Housing Enterprises of Canada, Limited, and its operating companies. Thus, by the end of 1947, the Central Mortgage and Housing Corporation was administering most of the housing activities of the Federal Government.

**Housing Legislation.**—Since 1935, the Federal Government has administered legislation designed to assist in the financing and improvement of housing in Canada. This commenced with the Dominion Housing Act, 1935 (see pp. 473-474, 1938 Year Book), and has been followed by the Home Improvement Loans Guarantee Act, 1937 (see pp. 370-371, 1941 Year Book), the National Housing Act, 1938 (see pp. 468-470, 1940 Year Book) and the National Housing Act, 1944.

\* Revised in the Special Surveys Division of the Dominion Bureau of Statistics.

The following table shows the number of loans made, and the amounts approved under the housing legislation passed since 1935.

### 1.—Loans Approved under Dominion Housing Legislation, by Provinces and Territories, 1935-48

NOTE.—This table is a combined statement of the net loans (cancellations and new loans) made under the Acts named in the preceding text.

**National Housing Act, 1944.**—The features of this Act as originally proclaimed appear on pp. 455-457 of the 1946 Year Book. The Act has been constantly amended to meet changing conditions. In 1948, the principal change was the addition of a rental insurance plan to encourage the construction of rental housing. An outline of the present status of the Act is given below.

**Loans to Prospective Home Owners.**—Loans are extended through approved lending institutions with the Federal Government advancing 25 p.c. of the total. The Act has been amended to provide for loans payable over periods up to 30 years with the amount based on a maximum of 95 p.c. of the first \$3,000, 85 p.c. of the second \$3,000, and 70 p.c. of the remainder of the lending value when the purchase price is predetermined and approved by the Central Mortgage and Housing Corporation. When the latter condition is not met a higher equity is payable. The maximum loan for a single family-dwelling has been increased from \$7,000 to \$8,500.

**Integrated Housing.**—This plan involves an agreement with a builder to build houses at a controlled sales price for veterans' preference. The Central Mortgage and Housing Corporation gives priority assistance and undertakes to purchase houses not sold within six months of the completion date. The provisions governing the size of the loan are the same as for prospective home owners.

*Co-operative Housing.*—The terms under which loans are made to co-operative groups intending to build housing projects are unchanged (see p. 456, 1946 Year Book).

*Rental Housing.*—The Act provides for a period of ten years at double the rates normally allowed for income tax purposes for approved types of dwelling comprising four or more family dwelling units. To encourage the construction of rental housing the Act was amended in 1948 by the addition of a Rental Insurance Plan. Owners of projects built under the plan are guaranteed a return of rentals sufficient to pay taxes, operating expenses, debt service and a minimum of 2 p.c. on the equity. The project must conform to certain standards of construction and must consist of at least eight housing units and the period of guarantee may be up to 30 years.

*Direct Loans.*—The Act was amended to enable the Central Mortgage and Housing Corporation to make direct loans for home ownership, rental housing, or rural housing if, in its opinion, joint loans are not available.

*Limited Dividend Companies.*—The Act provides for loans to limited dividend companies for the construction of low rental housing. The high level of building costs has deterred the development of low rental housing. During 1947, Housing Enterprises of Canada, Limited, suspended operations because they could not meet the cost levels originally contemplated.

*Loans to Primary Producers for Housing of Employees.*—Terms remain the same for loans to companies building housing quarters for employees engaged in primary production (see p. 585, 1947 Year Book).

*Land Assembly.*—The Act was amended in 1947 for the purpose of authorizing approved lending institutions to acquire, improve and sell land for residential purposes.

*Slum Clearance.*—Due to the extreme shortage of housing accommodation slum clearance projects have not been pressed in former years. However, a grant was approved in 1948 to assist in slum clearance in the city of Toronto.

*Farm Housing.*—If there is no existing mortgage or encumbrance upon the farm, the loan is limited to the least of \$5,000, the cost of building the house, or two-thirds of the appraised value of the farm. If there is a mortgage or encumbrance, the loan is limited to the least of \$8,000, the sum of the cost of building the house and liquidating existing indebtedness, or two-thirds of the appraised value of the farm. Loans for new farm housing are repayable over a period of up to 20 years at 4½ p.c. per annum calculated semi-annually.

*Home Extension Loans.*—The purpose of these loans is to enable the conversion of existing homes to create additional self-contained dwelling units. The terms of the loans are the same as in 1946 (see p. 586, 1947 Year Book).

*Housing Research and Community Planning.*—Research and community planning cover the fields of: economic and statistical inquiries; technical research in materials, equipment, standards, etc., and design. In 1947, the National Research Council of the Federal Government formed a Division of Building Research to undertake the major portion of actual technical and laboratory research work regarding building methods and materials.

*Emergency Shelter Regulations.*—These regulations were intended to assist municipalities in converting unoccupied houses, barracks or other suitable buildings for the accommodation of families suffering actual distress or hardship through lack of shelter. By the end of 1948, 10,304 units had been provided by municipalities and

universities and the Emergency Shelter Administration. The regulations were revoked as from Dec. 31, 1948, and activities in 1949 were limited to meeting outstanding commitments.

*Veterans' Land Act.*—A program, under the terms of this Act, includes construction of homes on small holdings outside urban areas. The project is the responsibility of the Minister of Veterans Affairs. (See also Chapter XXVIII on Veterans Affairs.)

*Farm Improvement Loans Act.*—This legislation aims at the improvement of living conditions on farms by the provision of electrification, refrigeration, heating systems, water systems, etc. The Act is more fully dealt with in Chapter XI on pp. 405-406.

## Section 2.—Construction of Dwelling Units in Canada

The number of dwelling units completed in Canada during 1948 is estimated at 81,243, including 5,146 units added by conversions, compared with 79,359 units in 1947. This brings the total number of dwelling units completed in the last four years to 276,516. At the end of 1948 there were more than 56,000 dwelling units under construction in Canada. During 1948 about 76 p.c. of completed dwellings were built in urban centres and approximately 81 p.c. of all completions were single houses. It is estimated that about 25 p.c. were for rental purposes and the remainder were built for owner-occupancy. The following tables summarize the results of surveys conducted by the Dominion Bureau of Statistics and the Central Mortgage and Housing Corporation.

## Section 3.—Contracts Awarded and Building Permits Issued

In this Section statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the Census of Construction. Further, values of contracts awarded, and especially of building permits, are estimates (more often underestimates) of work to be done. Obviously these statistics and those of Section 4 cannot be expected to agree, since much work contracted for towards the end of any one year is often not commenced until the next and, especially as regards large contracts or contracts undertaken late in any year, extends into more than one year. The figures here given are, therefore, supplementary to those of Section 4 and are valuable as showing from year to year the work immediately contemplated during the period.

**Construction Contracts.**—The figures published by MacLean Building Reports, Limited, for construction contracts awarded during 1948 showed a total of \$954,082,400. This amount represented an increase of 33 p.c. over the \$718,137,100 reported for 1947 and 65 p.c. over the high pre-war level (\$576,651,800) established in 1929.

Of the four main classes of construction shown in Table 6 residential, business and engineering showed increases of 89 p.c., 32 p.c. and 14 p.c., respectively, over those of 1947; the industrial class on the other hand showed a decrease of 34 p.c.

Regionally, Ontario accounted for the greatest volume with total awards of \$350,612,300, or 37 p.c. of the total, followed by Quebec with 34 p.c. The greatest percentage increases over 1947 were shown by Alberta and British Columbia. Prince Edward Island and Saskatchewan showed decreases in 1948.

<sup>1</sup> Totals of provincial figures do not agree with this figure due to rounding out.

**Building Permits.**—Statistics of building permits were first collected in 1910, when the series covered 35 urban centres; in 1920 they were extended to cover 58 municipalities, including unincorporated suburban areas as, with the advent of the automobile, a growing percentage of persons working in cities were residing outside the municipal boundaries of the urban centres in which they earned their living. In 1940 the series was again extended to cover 204 municipalities. The number of urban centres included is being expanded further. However, until plans are advanced it is felt desirable in the Year Book to maintain comparability with earlier issues by retaining the '204' list.

Building permits issued in 1948 registered an increase of 44 p.c. compared with 1947.

### 7.—Values of Building Permits Issued by 204 Municipalities, 1947 and 1948

NOTE.—Statistics for these series covering years previous to 1946 will be found in the corresponding tables of earlier editions of the Year Book. For the 35 cities marked (•) the record goes back to 1910; the 23 places marked (◊) were added in 1920.

<sup>1</sup> Incomplete returns.

The indexes given in Table 8 show, as far as possible, the fluctuations in building costs and their effect upon construction work and employment. The relative proportions of material and wage costs in general building are difficult to determine since such proportions vary with the type of building and the centres studied. Pre-war experience, the result of a special study made for 15 cities, indicates that the proportions of costs of materials to costs of labour in all construction averaged two-thirds for the former to one-third for the latter. The increase in the cost of recent building operations has probably been much more than is indicated by the increase in the indexes of wholesale prices and wages shown and the proportions of these items to total costs have, no doubt, undergone some variation due to changes in types and methods of construction and to the greater use of machinery.

Four of the largest cities, Montreal, Toronto, Winnipeg and Vancouver, accounted for \$161,025,270 or 30 p.c. of this total. In 1929 the same cities showed a value of \$126,387,555.

#### 8.—Values of Building Permits Taken Out in 204 Municipalities and Index Numbers of the Building Construction Industries, 1940-48

NOTE.—These 204 Municipalities are named in Table 7.

Year	Value of Building Permits, 204 Municipalities	Average Index Numbers of— (1926=100)		
		Wholesale Prices of Building Materials	Wages in Con- struction Industries <sup>1</sup>	Employment in Building Con- struction <sup>2</sup>
	\$			
1940.....	113,005,208	95.6	103.6	83.5
1941.....	135,301,519	107.3	110.6	139.5
1942.....	104,236,278	115.2	117.5	157.9
1943.....	80,190,123	121.2	126.6	160.2
1944.....	128,728,465	127.3	128.4	95.3
1945.....	197,187,160	127.3	129.9	101.8
1946.....	383,596,698	134.8	142.6	145.7
1947.....	373,231,249	166.4	153.6	190.6
1948.....	536,057,597	195.7	174.7	212.6

<sup>1</sup> Compiled by the Department of Labour.

<sup>2</sup> As reported by employers.

**Trends of Employment and Aggregate Wages Paid in the Construction Industry.**—In Tables 9 and 10 the employment figures, shown on a monthly basis, reflect the fact that the industry is not as decidedly seasonal as is sometimes thought. The month of highest employment in the industry as a whole, in 1947, was August with 250,108 wage-earners and the lowest was January with 145,210.

**9.—Employment of Wage-Earners in the Construction Industry, by Months,  
and Aggregate Annual Wages Paid, 1946 and 1947**

## Section 4.—Annual Census of Construction

The annual Census of Construction as taken by the Dominion Bureau of Statistics covers all construction, maintenance and repair work undertaken throughout Canada by contractors, builders and all public bodies with the exception of smaller municipalities. It also includes work done by the maintenance and repair crews of industrial plants, mines, electric power companies and commissions, etc., in organized communities where building permits are required. However, construction and repair work done by farmers and other individuals on their own structures is not covered. Further, construction of railway-roadbed, maintenance and repair work on steam and electric railways, telegraph and telephone systems and the lesser public utilities is not included when such work is done by the employees of these concerns in the ordinary way. Table 11 shows the expenditures by steam and electric railways, telegraph and telephone systems with the elimination wherever possible of items that are not germane to construction, such as snow, ice, and sand removal, dismantling of property, depreciation and retirement charges. By subtracting the work sublet to contractors from the expenditures, duplication with the Census of Construction figures is eliminated. Finally, by adding to the figures the totals given by the Census of Construction a total is obtainable which closely approximates over-all construction with the sole exception of work undertaken by farmers and other individuals for themselves.

### 11.—Expenditures by Steam and Electric Railways, and Telegraph and Telephone Systems on Road Construction, Maintenance of Way and Structures and Maintenance of Equipment, together with Totals of Annual Census of Construction, 1945-47.

Item	1945	1946	1947
	\$	\$	\$

<b>Combined Totals.....</b>	<b>251,725,270</b>	<b>272,915,194</b>	<b>284,083,839</b>
<b>Totals for Census of Construction.....</b>	<b>543,579,833</b>	<b>868,661,403</b>	<b>1,256,535,677</b>
<b>Grand Totals<sup>2</sup>.....</b>	<b>795,305,103</b>	<b>1,141,576,597</b>	<b>1,540,619,516</b>

<sup>1</sup> Exclusive of railway-owned systems, included above.

<sup>2</sup> Represents approximate total of all construction with the exception of work undertaken by farmers and other individuals for themselves.

**Statistics of Construction.\***—A census of construction was made by the Dominion Bureau of Statistics for 1934, but the basis of compilation was not standardized until 1935; comparable statistics are now available for the years 1935-47. Returns are received from general trade and subcontractors, municipalities, the Harbours Board, and Federal and Provincial Government Departments. The figures in Tables 12, 13 and 14 cover alterations, maintenance and repairs, and new construction. No relationship exists between the total value of construction shown in these tables, and the value of contracts awarded as indicated in Tables 5 and 6 of Section 3, p. 654. In the latter case all values are included as soon as awards are made, irrespective of whether the contract is completed or even begun in that year, whereas the following tables cover construction work carried on and actually performed in the calendar year.

\* Revised in the Construction Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

### 12.—Principal Statistics of the Construction Industry, 1944-47

NOTE.—Comparable figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1940 edition.

<b>Group</b>				
Contractors, builders, etc.....	381,216,381	458,869,189	775,452,420	1,097,381,782
Municipalities.....	23,782,546	26,347,676	34,082,081	47,341,030
Harbour Commissions.....	1,304,594	1,646,552	1,797,187	2,027,643
Provincial Government Departments.....	36,520,088	43,135,675	43,943,196	93,172,148
Federal Government Departments.....	7,014,450	13,580,741	13,386,519	16,613,074
<b>Type of Work Performed</b>				
Building construction.....	220,299,949	288,092,582	490,437,540	658,383,053
Street, highway, power, water, etc., construction.....	142,431,180	146,216,938	220,549,198	395,025,698
Harbour and river construction.....	10,692,622	12,690,727	15,941,539	22,638,945
Trade construction.....	76,414,317	96,579,586	141,763,126	180,487,981

The value of work performed by the construction industry in 1947 amounted to \$1,256,535,677 as compared with \$868,661,403 in the preceding year, an increase of 45 p.c.

The value of building construction increased from \$490,407,540 in 1946 to \$658,383,053 in 1947. The construction of industrial buildings increased from \$151,305,541 to \$193,053,068 while the construction of armouries, barracks, hangars, etc., decreased from \$8,769,191 to \$7,534,016. The value of residential building advanced from \$193,626,880 to \$233,303,589, institutional from \$48,623,956 to \$73,361,869, and commercial from \$88,081,972 to \$151,130,511. Construction work involving engineering, harbours, rivers, etc., increased from \$236,490,737 in 1946 to \$417,664,643 in 1947.

In the industry as a whole, employment was provided for a total of 250,330 persons in 1947, recording an increase of 51,479 over the total for the preceding year, while the aggregate of salaries and wages at \$482,907,226 was \$138,014,169 higher. The cost of materials used in 1947 was \$654,996,225, an increase in expenditure for this purpose of \$195,030,484.

In 1947 reports received numbered 26,542 as compared with 23,793 in 1946. A good part of the increase was recorded in the number of reports received from owner-builders who erected their own homes because they were unable to obtain the services of a contractor. These statistics are included in the tables showing the operations of general contractors, trade contractors and subcontractors. Although the increase in the number of reports was considerable, the comparatively small extent of their operations does not appreciably affect other totals.

#### 14.—Principal Statistics of the Construction Industry, by Provinces and Groups, 1947

NOTE.—Comparable figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1937 edition

Table 15 classifies the various types of construction carried out in 1947. The term "Trade Construction" covers such items as bricklaying, carpentry, plumbing, heating, electrical work, etc., reported by contractors who confine themselves to a specific type of work. Details by provinces and more complete information regarding the industry will be found in the reports of the Dominion Bureau of Statistics on the construction industry.

#### 15.—Values of New and Other Construction, by Type, 1947

NOTE.—Comparable figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

## Section 1.—The Government in Relation to Labour

### Subsection 1.—The Federal Department of Labour

The Department of Labour of Canada was established in 1900 by the Conciliation Act which provided machinery to aid in preventing and settling labour disputes, and required the Department to collect, compile and publish statistical and other information. The Department assumed, too, the administration of the Fair Wages Policy which was adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds.

At the present time, in addition to the statutory duty of disseminating information concerning labour and industrial matters, the Minister is responsible for the administration of certain statutes; Conciliation and Labour Act; Fair Wages and Hours of Labour Act, 1935; Vocational Training Co-ordination Act, 1942; Unemployment Insurance Act, 1940; Reinstatement in Civil Employment Act, 1946; Government Annuities Act; and Industrial Relations and Disputes Investigation Act, 1948.

**Fair Wages Policy.**—Wages and hours of work on contracts for the manufacture of equipment and supplies for the Federal Government and for construction were governed for some years by a Resolution of the House of Commons (1900) which was later incorporated in an Order in Council and amended from time to time. Contracts for construction are now regulated under the Fair Wages and Hours of Labour Act, 1935, and by an Order in Council of June 7, 1922, as amended

\* Except as otherwise noted, this Chapter has been prepared or revised under the direction of A. MacNamara, C.M.G., Deputy Minister of Labour, Ottawa.

Apr. 9, 1924, and May 2, 1949. Hours on such work are limited to eight per day and 44 per week except in an emergency or when declared exempt by Order in Council; wages to be paid are those current for the type of work in the district concerned or, if there are no current rates, fair and reasonable ones determined by the Minister.

Wages and hours for work on contracts for equipment and supplies are regulated by the Order in Council of 1922 as amended on Dec. 31, 1934, and May 2, 1949. The hours on such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable, but in no event shall they be less than those established by statute or regulation of the province in which the work is being performed. In both construction and supplies contracts the term 'current wages' and, in supplies contracts, the term 'hours fixed by the custom of the trade' mean the standard conditions fixed by agreement between employers and unions or, failing agreement, the actual conditions prevailing.

**The Industrial Relations and Disputes Investigation Act.** — This legislation, which was given third reading in the House of Commons on June 17, 1948, and came into effect by proclamation on Sept. 1 of that year, revoked the Wartime Labour Relations Regulations, P.C. 1003, in effect since March, 1944, and repealed The Industrial Disputes Investigation Act which had been in force from 1907 until suspended by the Wartime Regulations in 1944.

The new Act protects proceedings commenced and decisions, orders and certifications made under the wartime legislation insofar as these involved services authorized by the Act.

The Act applies only to industries within federal jurisdiction, viz., navigation, shipping, interprovincial railways, canals, telegraphs, steamship lines and ferries both international and interprovincial, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or two or more provinces. However, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to employees within provincial jurisdiction and make mutually satisfactory arrangements with the Federal Government for the administration of such legislation by the federal authorities.

In general, the Act in its important features provides that employees and employers shall have the right to organize and bargain collectively, that trade unions may be certified as bargaining agents for groups of employees, and that trade unions and employers are required upon notice to bargain collectively in good faith. The Act provides for invoking collective bargaining negotiations and for the mediation of Conciliation Officers and Conciliation Boards in reaching collective agreements. Employees may change bargaining agents at times under conditions specified in the Act which also prescribes conditions affecting the duration and renewal of collective agreements. Collective agreements are required to contain provision for the arbitration of disputes concerning the meaning or violation of such agreements and where such a provision is lacking application may be made for its establishment. The Act prohibits unfair labour practices, i.e., the interference with or domination of trade unions by employers or interference and discrimination in trade union activity. The conditions precedent to strike and lockout action are provided in the Act. Industrial Inquiry Commissions may be appointed to investigate industrial matters or disputes.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the provisions, for the appointment of Conciliation Officers, Conciliation Boards and Industrial Inquiry Commissions, for consent to prosecute and for the making of complaints that the Act has been violated or that a party has failed to bargain in good faith.

The Canada Labour Relations Board (successor to the Wartime Labour Relations Board) administers provisions concerning the certification of bargaining agent, the writing of a procedure into a collective agreement for the final settlement of disputes concerning the meaning or violation of such agreement, and the investigation of complaints made to the Minister that a party has failed to bargain collectively.

Between March, 1944, and August, 1948, the Wartime Labour Relations Board received 700 applications for the certification of bargaining representatives, 388 of which were granted. From Sept. 1, 1948, to June 30, 1949, the Canada Labour Relations Board dealt with 68 applications for certification, 32 of which were granted.

Of the 524 industrial disputes dealt with under the conciliation provisions of the Wartime Labour Relations Regulations, 231 were settled by Conciliation Officers and 186 by Conciliation Boards; the conciliation procedure failed to avert work stoppages in only 12 of the 524 cases. From Sept. 1, 1948, to June 30, 1949, 35 disputes were dealt with under the new legislation; as at June 30, 1949, 18 of these disputes had been settled by Conciliation Officers and two by Conciliation Boards.

### Subsection 2.—Provincial Labour Departments

Labour legislation in Canada is, for the most part, a matter for the Provincial Legislatures since it usually governs, in some respects, the contract of service between employer and employee or the contract between members of a trade union which forms the basis of the union, or it regulates conditions in local work-places. The right to contract is a civil right and the British North America Act, which distributes legislative powers between the Parliament of Canada and the Provincial Legislatures, grants to the provinces power to enact laws in relation to "civil rights" and, with certain exceptions, "local works and undertakings".

In each province, except Prince Edward Island, a special Department or Bureau is charged with the administration of labour laws. In Alberta, the Board of Industrial Relations under the Minister of Industries and Labour administers statutes concerning wages, hours and labour welfare, and the Department of Public Works has charge of factory legislation. Other provinces have Departments of Labour. Legislation for the protection of miners is administered by Departments dealing with mines.

Factory legislation in eight provinces and shops legislation in several provinces prohibit child labour, regulate the hours of women and young persons, and provide for safety and health. Other labour statutes in most provinces include minimum-wage legislation and maximum-hours laws, laws for the settlement of industrial disputes, legislation to ensure freedom of association and promote collective bargaining, and laws to provide for apprenticeship and the licensing of certain classes of workmen. The Industrial Standards Acts in Saskatchewan, Ontario, New Brunswick and Nova Scotia, the Alberta Labour Act and the Fair Wage Act in Manitoba enable the wages and hours of work agreed upon by representatives of employers and employed in designated trades to be made legal throughout the trade concerned. The Quebec Collective Agreement Act permits agreements between

employers and trade unions to be made binding on all in the industry. Workmen's compensation laws in all provinces are administered by independent boards except in Newfoundland where claims for compensation are settled in the Courts.

For information regarding individual Provincial Departments of Labour, reference should be made to the annual reports of the Departments concerned or to the Deputy Ministers of Labour of the Provincial Governments.

### Subsection 3.—Provincial Labour Legislation in 1948-49

**Prince Edward Island.**—A *Workmen's Compensation Act*, providing for a compulsory collective liability system similar to that in force in most provinces, was enacted. Benefits payable are for the most part the same as those payable under the Nova Scotia or New Brunswick Acts.

The *Trade Union Act* was amended to repeal sections added in 1948 requiring trade unions to be registered with the Provincial Secretary and prohibiting a closed shop contract and the affiliation of a union in the Province with a national or international organization. The trade of 'garage mechanic' was added to the list of designated trades under the *Apprenticeship Act, 1944*.

**Nova Scotia.**—The *Trade Union Act* was amended in several respects. Trade unions are now required to have a written constitution. In a vote taken under the direction of the Labour Relations Board to determine whether a trade union shall represent a unit for bargaining purposes, the Board must be satisfied that not less than 60 p.c. of the employees in the unit have voted and that a majority of such 60 p.c. have selected the trade union to be the bargaining agent on their behalf.

The Board may now revoke the certification of a trade union as a bargaining agent only on an application for revocation of such certification, or on an application by another union for certification as bargaining agent for the same unit. Power is given to the Board to make regulations prescribing what evidence shall constitute proof that a person is a member in good standing of a trade union.

An amendment to the section regarding check-off votes provides for the check-off when a majority of the eligible voters vote in favour of it. In the case of certified unions, eligible voters are defined as trade union members in the unit for which the union has been certified and, in the case of uncertified unions, as trade union members in a unit designated by the Minister as the appropriate unit for the purposes of such vote. Previously, all the employees of the employer were permitted to vote.

Amendments to the *Workmen's Compensation Act* increase compensation in fatal cases in respect to each child under 16 from \$10 to \$12.50 a month, with a maximum of \$100 a month for widow and children. The previous maximum for consort and children was \$90. Where dependants are orphans, compensation is increased from \$20 to \$22.50 a month with a maximum of \$90, instead of \$80, as before. In permanent total disability cases, the minimum weekly payment is increased from \$12.50 to \$15. The maximum earnings to be reckoned for compensation purposes are raised from \$2,000 to \$2,500 a year.

The *Apprenticeship Act* was amended to increase from 2,000 to 4,000 hours the minimum time for which an apprenticeship contract may be made. The Act is under the direction of the Director of Apprenticeship rather than inspectors under any other Act. A further revised section provides that remuneration may be paid to members of the Provincial Apprenticeship Committee. The section em-

powering the Governor in Council to make regulations was re-written to make certain changes with respect to the issuance of certificates of apprenticeship and of certificates of qualification.

A new *Steam Boiler and Pressure Vessel Inspection Act* applies, in addition to high pressure steam boilers, to unfired pressure vessels having an internal or external pressure in excess of 15 lb. per square inch and having an inside diameter of more than six inches. The penalties for violation of the Act are increased.

Acts regulating the operation of coal and metal mines were amended with regard to certain safety measures and to the reporting of accidents.

The *Vocational Education Act* provides for agreements between the Governor in Council and a municipality or between one municipality and another for the purpose of building and operating vocational high schools.

**New Brunswick.**—The *New Brunswick Labour Relations Act*, in force July 1, 1949, is almost identical with the federal *Industrial Relations and Disputes Investigation Act*. Like the federal statute, it provides for the certification of trade unions as bargaining agents, the conciliation of disputes, the prohibition of strikes and lockouts until collective bargaining and conciliation procedures have been complied with, and penalties for unfair labour practices.

The *Trades Examination Act*, 1949, provides for the issuance of certificates of qualification as journeymen to workmen in the electrical, electric welding and gas-welding trades.

The *Apprenticeship Act* was amended to permit the Apprenticeship Committee to delegate its powers to the Director, and to provide for an appeal to the Committee within 60 days from actions taken by the Director. The Government was empowered to make regulations fixing the compensation payable to a prospective apprentice while taking a pre-apprenticeship course.

**Quebec.**—An *Act respecting Municipal and School Corporations and their Employees* provides for compulsory arbitration of disputes between municipal and school corporations and their employees by the setting up of three-member councils of arbitration which are to hold office for a term of two years. Two of the arbitrators represent the corporation and the employees, respectively; the third, who represents the public and acts as chairman, is appointed by the Lieutenant-Governor in Council. Arbitration Board decisions and collective agreements are to remain in force for two years. Agreements and decisions which involve increased expenditure cannot take effect before the end of the current fiscal year.

An amendment to the *Workmen's Compensation Act* increases the membership of the Workmen's Compensation Commission from four to five.

The *Masters and Servants Act* and the *Fisherman's Engagement and Wage Act* were repealed.

**Ontario.**—Under the *Workmen's Compensation Act*, from Jan. 1, 1950, a workman who is totally disabled by an accident occurring out of and in the course of his employment is entitled to receive 75 p.c. of his average weekly earnings. In a case of partial disability, 75 p.c. of the difference in earnings before and after the accident is payable. The previous rate of compensation was 66 $\frac{2}{3}$  p.c. The maximum average earnings on which compensation may be based is raised from \$2,500 to \$3,000 a year.

Provision for higher benefits in death cases was made by increasing the maximum monthly amount of compensation payable to all dependants, exclusive of burial expenses and the lump sum of \$100, from two-thirds of average earnings to 100 p.c. of average monthly earnings. Benefits to other dependants when there is no widow or child are to be determined by the Board according to the pecuniary loss sustained, up to a limit of \$100 a month.

Compensation is payable to the age of 18 in order to continue a child's education, if the Board sees fit. The amending Act permits continued payments to the end of the school year if the child reaches the age of 18 during the school year.

A minor change in the *Industrial Standards Act* provides that for an inter-provincially competitive industry the zone designated by the Minister of Labour must be the whole of Ontario and any industrial standards schedule established for the industry may provide for varying wages and hours and days of labour for different areas within the zone.

The *Police and Fire Departments Acts* were revised. No material change was made in the sections dealing with collective bargaining and the arbitration of disputes but provision was made for provincial grants to municipalities having a police or fire department if certain conditions were met.

**Manitoba.**—The *Manitoba Labour Relations Act*, 1948, was patterned after the federal *Industrial Relations and Disputes Investigation Act*. It repealed the *Manitoba Wartime Labour Relations Regulations Act*, 1944, and the *Strikes and Lock-outs Prevention Act*, 1937. The former had applied the Federal Wartime Labour Relations Regulations (P.C. 1003) to industries normally under provincial jurisdiction.

The *Hours of Work Act*, effective July 1, 1949, limits working hours in the more important industries of the Province to eight and 48 for male workers and to eight and 44 for females unless time and one-half is paid after those limits. Daily or weekly hours may be exceeded, in certain cases, without payment of overtime rates, with the approval of the Manitoba Labour Board. Exempted are: persons employed in an undertaking employing only the employer's family, those chiefly engaged in supervisory, management or confidential duties, travelling salesmen, watchmen and caretakers.

Two new Acts, to become effective on proclamation, deal with the inspection and operation of steam and pressure plants and provide for the issuance of operating engineers' and firemen's certificates.

**Saskatchewan.**—Changes in the *Workmen's Compensation (Accident Fund) Act* included a provision for higher benefits for totally disabled workers. A totally disabled worker with dependants who is receiving compensation at a rate of less than \$1,200 a year may be paid the following additional amounts, at the discretion of the Workmen's Compensation Board: \$10 a month for a wife or invalid husband, and \$5 a month each for the first and second child under 16. Where the only dependants are children, the increase may be \$10 a month for the first child, and \$5 each for the second and third. Where dependants are other than consort or children, compensation may be increased by a reasonable sum to be determined by the Board. The total compensation for complete disability must not, however, exceed \$1,200 a year. The minimum payment in permanent total disability cases is now \$15 a week. Formerly, it was \$15 or if the workman's average earnings were less than \$15, the amount of such earnings.

By an amendment to the *Hours of Work Act*, caretakers and janitors employed in offices and commercial buildings were brought under the Act. Those working in buildings used principally for residential purposes are exempted. The stipulation against a reduction of wages in undertakings where hours were reduced to 44 as required by the Act unless time and one-half is paid, was extended to Apr. 1, 1950.

Janitors and watchmen were brought within the scope of the *One Day's Rest in Seven Act*.

The *Minimum Wage Act* was amended to require an employer to give a week's written notice of intention to lay off an employee who has been in his service for three months or more. The Act formerly required a week's notice to be given in cases of discharge.

A new section inserted in the *Factories Act* empowers the Minister of Labour to impose on the owner of a factory, rather than on the occupier, any obligation imposed by the Act or regulations to install equipment or make alterations in premises which are occupied by an employer other than the owner.

The *Teachers' Salary Negotiation Act* was passed to establish procedure for collective bargaining between teachers and boards of school trustees.

A new Act sets forth the duties and powers of inspectors and lays down requirements concerning construction, installation, operation and repair of passenger and freight elevators. An Act was also passed respecting electrical inspection and licensing.

**Alberta.**—No labour legislation was enacted at the 1949 session of the Alberta Legislature. Amendments to the *Boilers Act* make the sections of the Act relating to pressure vessels applicable to liquefied petroleum gas containers.

**British Columbia.**—The *Apprenticeship Act* was amended giving more authority to the Minister of Labour in exempting minors from the requirement of entering into a contract of apprenticeship. Persons under 21 years of age working in designated trades under conditions that prevent them from receiving the necessary training to become proficient at those trades may now be exempted. A minor who has learned his trade without entering into a contract of apprenticeship and who has, in the opinion of the Provincial Apprenticeship Committee, the skill required for a fully qualified tradesman in that trade, is no longer prevented from working at his trade.

An amendment to the *Municipal Act* provides for compulsory arbitration in a dispute between a municipality or Board of Police Commissioners and the firemen and policemen in their employ.

**Northwest Territories.**—The *Workmen's Compensation Ordinance*, 1948, effective Mar. 1, 1949, requires employers to obtain, in an approved company, accident insurance providing for payment of compensation to their workmen for personal injury by accident or disability by reason of certain industrial diseases. If an employer fails to enter into a contract of insurance he is liable to a fine not exceeding \$500, and, in addition, the Commissioner of the Northwest Territories may refuse to grant him a licence to carry on business or may cancel such licence if already granted.

The Commissioner may exempt from the application of the Ordinance any employer who has made other satisfactory arrangements for the protection of his workmen. Industries and diseases covered by the Ordinance have been prescribed by regulation.

If compensation under a policy of insurance is, in the Commissioner's opinion, less than the amount which would be payable for a similar disability under the Workmen's Compensation Act of British Columbia, he may pay the difference out of territorial funds, provided that application has been made by the employee or his dependants within a year after payment.

**Yukon.**—The *Workmen's Compensation Ordinance* of Yukon Territory was amended in 1948 to restore certain sections which were omitted in the revision of 1947. One of these provides that a workman who loses a member shall be entitled, in addition to the lump sum provided for his specific injury, to be paid a weekly payment of 50 p.c. of his average daily wages while he is under treatment and until he is restored to fair health but not for longer than 12 months. The other section provides that compensation for the loss of a tooth shall be the actual cost of replacing it, the dental services required being determined by a qualified dentist and approved by a qualified medical practitioner provided and paid by the employer.

## Section 2.—Occupations of the Gainfully Occupied Population

Detailed statistics on the occupations of the Canadian people in 1941 will be found in Vol. VII, Census of Canada, 1941. A special review of this subject, based on the 1941 Census figures, appears at pp. 1062-1073 of the 1943-44 Year Book, and further information at pp. 1168-1169 of the 1945 edition.

## Section 3.—Employment and Unemployment

### Subsection 1.—Labour Force Surveys\*

During the War it became increasingly apparent that up-to-date information on the size and characteristics of the labour supply was a necessity. The possibility of disturbed economic conditions in the post-war period emphasized the need for a current and periodic analysis of the state of Canadian employment. It was clear that frequent periodic enumeration of the whole population would be too expensive and time consuming and that sampling techniques should be used. Designed to meet this need, the first labour force survey on a sample basis was conducted in the autumn of 1945, and quarterly surveys have been carried out since that time.

A multi-stage area-sampling technique was used involving the selection of progressively smaller sample areas, and ultimately households. Random methods of choice were used at every stage of selection so that all members of the population had an equal chance of inclusion. At the time the sample was designed it was considered impracticable because of inaccessibility and high cost of enumeration to include certain remote areas of the country and Indians living on reservations. These areas, including about 2 p.c. of the population, were originally given no chance of inclusion in the sample, and the estimates of the labour force are not considered to represent them. However, the sample is currently being modified to take these remote and inaccessible areas into account.

The estimates of the labour force are restricted to the civilian labour force, since net strength of the Armed Forces is obtainable directly from official sources. Inmates of institutions are also excluded because they are not in the competitive labour market.

\* Revised in the Special Surveys Division, Dominion Bureau of Statistics.

The present sample includes about 25,000 households in approximately 100 different areas in Canada. These 100 areas include the 27 cities having a population of 30,000 or over, in addition to some of the smaller cities and various rural areas. Once a year, at the midsummer survey, the sample in the metropolitan areas of cities of 30,000 and over is increased to include 2 p.c. of the households instead of the usual 1 p.c. coverage, in order to improve the estimates of inter-provincial migration obtained from the sample.

The labour force surveys provide an exhaustive classification of persons 14 years of age or over on the basis of their activity during a specified week, which is, in each case, the week which precedes the beginning of the survey. Information on the part of the population not in the labour force is also collected. These non-workers are classified as keeping house, going to school, retired or voluntarily idle, too old or permanently unable to work.

The information gathered on the labour force is divided for presentation into two groups: (1) employed, (2) unemployed. The estimates of the employed are classified by region, sex, age, hours worked, occupation, industry and occupational status. Special estimates are given for women employed in domestic service, and employed women by marital status.

The employed category includes persons who worked during the survey week, as well as those temporarily absent from their jobs because of illness, vacation, bad weather, labour disputes or temporary layoffs. Estimates of the latter are given by reason for absence.

Persons looking for work, but not working during the survey week, are counted as unemployed. Estimates of this group are classified by region, sex, age, and number of months looking for work.

The estimates of the labour force surveys are all subject to sampling error, which tends to increase as the size of the estimates decreases. Accordingly, the reliability of the smaller estimates is less than that of the larger estimates. Estimates of less than 10,000 should not be used without careful reservations.

**1.—Estimated Distribution of Employment in Certain Industries in Canada,  
November, 1945, to March, 1949**

### Subsection 2.—Employment and Unemployment Statistics of the Census

Detailed statistics of earnings, employment and unemployment of the Canadian people as at June 1, 1941, will be found in Vol. VI, Census of Canada, 1941.

### Subsection 3.—Employment and Payrolls as Reported by Employers\*

For over 25 years, the Dominion Bureau of Statistics has made monthly surveys of employment in the major industries, excluding agriculture, domestic and personal service, and government administration. The broad industrial groups covered by these surveys are: logging, mining, manufacturing, construction and maintenance, transportation and storage, communications, trade, services (chiefly hotels, restaurants, laundries and dry-cleaning plants) and finance. Early in 1941, the surveys of employment were extended to cover the current earnings of those in recorded employment and, since late in 1944, monthly data on man-hours and hourly earnings also have been collected. Inquiries into the sex distribution of the persons on the payrolls of reporting establishments were undertaken on a monthly basis commencing Feb. 1, 1946, replacing the annual and the semi-annual surveys of the immediately preceding years.

For practical reasons associated with problems of collection,† the current inquiries are limited to firms and branches ordinarily employing 15 or more persons. The restriction results in the inclusion of industrial samples of varying size in the monthly survey, the variation depending upon the organization of the industry in large or in small units; from the equally important geographical aspect, however, much greater uniformity exists in the provincial coverage of total employees. It is important to note that in all cases the coverage is large; it is estimated that some 19,000 firms co-operating in the nine major industrial groups in 1948 showed approximately 82 p.c. of the total wage-earners and salaried employees employed in the same industries throughout Canada.

For the second year in succession industrial employment in Canada reached a new all-time high level in response to continued heavy public demand for goods and services. The annual employment index for 1948 (based on 1926 = 100), was 195·8, an increase of 4·2 p.c. over the index of 187·9 for 1947, when reconversion was almost completed. Although production in 1948 was facilitated by better supplies of material and labour, there were still some shortages, particularly in the building industry. Labour relations improved considerably as compared with the preceding year; the working time lost due to industrial disputes was approximately 37 p.c. of the time lost in 1947, while the number of workers involved in these disputes in 1948 was less than 40 p.c. of those directly affected in 1947. The European Recovery Program and the purchases made in Canada under its provisions resulted in greater domestic exports in 1948 than in 1946 or 1947 and this reflected in higher levels of employment in Canada in 1948.

In 1948 the general index of employment followed its usual seasonal pattern steadily declining from Jan. 1 to May 1. During this period, the index dropped from 193·7 to 186·5, a somewhat greater reduction than that indicated in the same

\* Revised in the Employment Section, Labour and Prices Division, Dominion Bureau of Statistics.

† The methods used in preparing the current statistics of employment and payrolls are explained in the Monthly Bulletin on these subjects.

period in any other year since 1944. From the beginning of May, the index continued to ascend until it reached its all-time maximum of 204.3 at Dec. 1, exceeding the figure for Dec. 1, 1947 by 4.7 points.

Employment in manufacturing, although still below the peak reached in 1943, was maintained at a generally high level in spite of some recessions at the beginning of several months in 1948. At Dec. 1, the employment index, at 207.9, was 4.0 p.c. above the Jan. 1 figure. During the same period the index of employment for the reporting non-manufacturing industries taken as a whole increased by 10.1 p.c. Both of these advances were considerably less than those of 6.8 p.c. and 12.7 p.c. in the manufacturing and the non-manufacturing industries, respectively, reported in 1947 over 1946. Within the manufacturing group in 1948 there was a slightly greater increase in employment in the durable goods group than in the non-durable group.

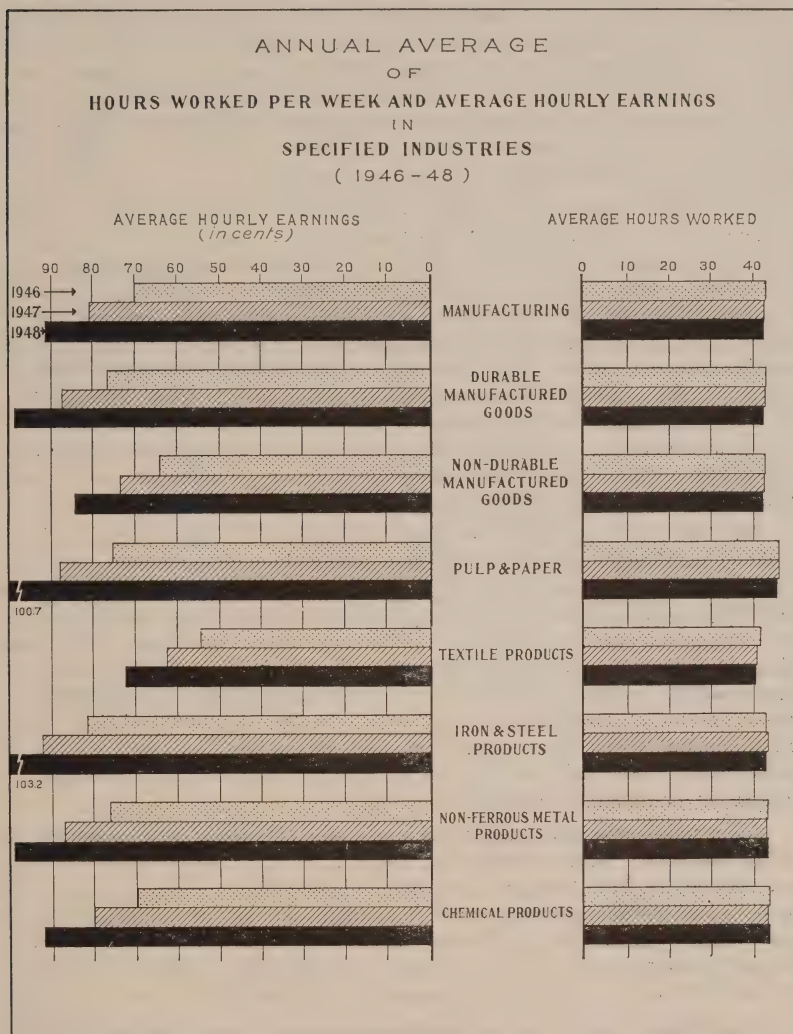

Gains were noted in all the major non-manufacturing industries with the exception of logging. The increases in the index numbers for 1948 over 1947 ranged from 2.6 p.c. in transportation and 4.8 p.c. in services to 9.8 p.c. in mining and 10.3 p.c. in construction. In all cases except mining the advances were less than the percentage increases shown in a similar comparison between 1947 and 1946. During 1948, however, the employment indexes reached new high levels in all non-manufacturing industries except mining and logging.

The proportion of women on the staffs of the reporting establishments declined slightly in 1948. No change in the proportion of women workers took place in the non-durable manufacturing group, nor in the non-manufacturing industries taken as a unit. There was a reduction, however, in the durable goods group of manufacturing, indicating that post-war adjustment was completed. The proportion of women per 1,000 workers of both sexes in the nine leading industries was 219 at Oct. 1, 1948, compared with 220 at Oct. 1, 1947, and 271 at Oct. 1, 1944, when the ratio was at its maximum. Although the proportion of women declined in the twelve months, the number of female employees reported increased by 2 p.c. at Oct. 1, 1948, as compared with a year earlier. The increase among male workers in the same period was 2.6 p.c.

At Oct. 1, 1948, there were 226 women per 1,000 workers in recorded employment in manufacturing as compared with 229 at Oct. 1, 1947. In 1939, the general proportion of women per 1,000 workers, as recorded by the Annual Census of Manufactures, was 220 women. In the non-manufacturing industries, the proportion of women decreased except in mining and construction, in which few of the reported employees were women. The most marked decline in the proportion of women workers in leading establishments between Oct. 1, 1947, and Oct. 1, 1948, was noted in services, the ratio of female employees falling from 536 per 1,000 workers at the former date to 515 at the latter, and in trade, in which the proportion dropped from 402 to 390 per 1,000. During the same period, the communications industry reported larger proportions of female workers than any other major industrial division. The ratios of female workers in the major industry groups are given in Table 3.

The 1948 annual index of payrolls for the eight leading industries increased by 15.6 p.c. over the preceding year. This increase was due not only to higher employment, but was also a result of numerous upward adjustments in wage rates. The average index (June 1, 1941=100) was 199.6, compared with 172.6 for 1947 and 142.4 for 1946. The general index increased steadily from month to month in 1948 with the exception of Apr. 1 and May 1. The declines at those dates were not only the

result of the statutory holidays in the pay periods for which data were furnished, but were also due to curtailment in employment. While the employment index increased by 5.4 p.c. from Jan. 1 to Dec. 1, 1948, the payrolls index rose by 22.8 p.c. in the same period. The increases indicated in the same comparison in 1947 were 10.3 p.c. in employment and 29.4 p.c. in payrolls. The most marked gains in the year took place in the annual payroll indexes for construction and mining.

The trend of weekly earnings in 1948 continued upwards. The annual per capita figure in the eight leading industries was \$40.11, the highest in the record of over seven and one-half years. This figure was 11 p.c. above the average weekly earnings

of \$36.15 reported in 1947. Since June 1, 1941, when the monthly record of payrolls was commenced, to Dec. 1, 1948, the general increase in the average weekly earnings was 67.2 p.c. In each of the main industrial divisions, the average weekly salaries and wages exceeded those reported at any earlier date. The increases in 1948 over 1947 varied from 9.4 p.c. in communications to 13.4 p.c. in mining. The general average of weekly earnings in the manufacturing industries was \$40.91, a gain of 11.9 p.c. over the figure of \$36.57 recorded for 1947.

As has been the case since the record of payrolls was instituted in 1941, the 1948 per capita figure for British Columbia, at \$42.62, was higher than that for any other province. Similarly Windsor, as a result of the large proportion of workers in the automotive industry, maintained a substantial lead over the other seven larger cities, its annual average of weekly salaries and wages being \$47.42. The average earnings indicated in Fort William-Port Arthur, Hamilton, Toronto and Vancouver also exceeded the general figure for Canada as a whole.

There were widespread increases in the average hourly earnings of wage-earners in 1948. In manufacturing, the annual figure advanced from 80.3 cents in 1947 to 91.3 cents in 1948, or by 13.7 p.c. The gain was slightly greater in the durable goods group, the average hourly earnings rising from 87.2 cents in 1947 to 98.4 cents in 1948. In the latter year, the annual average of 84.0 cents in the non-durable goods group exceeded the 1947 figure by 10.6 cents. Within the main manufacturing groups, the highest annual average of hourly earnings in 1948 was recorded in the non-metallic mineral products group, in which the figure stood at 107.8 cents per hour; the employment of many highly-skilled wage-earners in the petroleum products group contributed to the unusually high rate. The annual average also exceeded \$1 an hour in the pulp and paper and iron and steel product groups, and in numerous groups of several other major industries.

Statistics of average hourly earnings are tabulated for manufacturing in the provinces and leading cities. As has been usual, the average hourly earnings in leading establishments were higher in British Columbia than in any other province, the 1948 figure being 108.0 cents. The earnings in the other provinces varied from 82.7 cents an hour in New Brunswick, to 95.8 cents an hour in Ontario. In the larger cities, the highest hourly earnings in 1948 were reported in Vancouver, where the figure was 107.7 cents. The annual averages in manufacturing in the other cities were as follows: Montreal, 87.1 cents; Toronto 95.5 cents; Hamilton, 101.4 cents; and Winnipeg, 88.3 cents. Figures for the average earnings for the cities and the provinces, are greatly affected by the industrial, sex and age distributions of the workers for whom information is available.

Fewer wage-earners are paid by the hour in the non-manufacturing groups than in manufacturing. Data are available, however, for considerable numbers of wage-earners in mining, local transportation, building construction, highway construction, hotels and restaurants and laundries. The annual average of hourly earnings for persons employed in leading mining establishments was 111.1 cents in 1948 as compared with 98 cents in 1947. In building construction the reported wage-earners received 100.9 cents compared with an average of 91 cents in the preceding year.

The average hours worked in leading manufacturing establishments during the four years for which information is available have steadily diminished. In 1948 the decline was 0.3 hours, the average being 42.2 hours per week. The reduction was slightly greater in the durable goods industries, in which the reported wage-earners averaged 42.3 hours as compared with 42.7 hours in 1947. In

the non-durable group of manufacturing the mean was 42 hours per week in 1948 and 42.3 hours in 1947. In the non-manufacturing groups the average hours of work declined in 1948 in local transportation, highway construction and services. The average working week was slightly longer in mining and building construction; in the case of the former industry, a decline in the time lost as a result of industrial disputes was a factor in the higher average in 1948 as compared with 1947.

### 3.—Percentage of Women Employed in Leading Industrial Groups as at Oct. 1, 1943-48

Industrial Group	1943	1944	1945	1946	1947	1948
	p.c.	p.c.	p.c.	p.c.	p.c.	p.c.

<sup>1</sup> Includes the following industries: iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products. The non-durable group includes the remaining manufacturing industries with the exception of electric light and power.

<sup>2</sup> Mainly hotels, restaurants, laundries and dry-cleaning establishments.

**Employment and Payrolls by Economic Areas.**—Industrial employment in 1948 reached new all-time high levels in Ontario and the Western Provinces. Some levelling in the rate of expansion was indicated in most areas, the increases in 1948 over the preceding year being lower than those indicated in a comparison between 1947 and 1946. In the Maritime Provinces taken as a unit, however, the increase of 5.4 p.c. in the annual index in 1948 was considerably greater than the gain of 0.6 p.c. in the preceding year, when the situation had been seriously affected by disputes in coal mining. The gains in Ontario, British Columbia and in the Prairie Provinces taken as a unit, were slightly above the annual average increase of 4.2 p.c. generally recorded in Canada. The improvement recorded in Quebec was slightly below the average, the most recent annual index increasing only by 3.2 p.c. over that for 1947.

The 1948 indexes of aggregate weekly payrolls followed the same general trend as those of employment in all provinces, although the advances were on a relatively greater scale. In all areas, the index numbers of payrolls were the highest on record.

Industrial activity improved considerably in the Maritime region; the index of employment, at 197·8 at Dec. 1, 1948, was only 1·9 points below the peak of 199·7 recorded at Dec. 1, 1943. The movement in all major industries except logging was favourable. The largest gain in the 1948 index over that for 1947 was in the mining industry, which had been adversely affected by disputes in the coal mines in the preceding year. A substantial gain was also noted in construction in 1948 as labour and building materials became more plentiful. The weekly earnings of persons in recorded employment in the Maritime Provinces increased from an average of \$32·80 in 1947 to \$35·98 in 1948, when the figure was at a maximum in the record of 7 years.

The general index of employment in Quebec was 198·5 in 1948 as compared with 192·3 in 1947. The annual all-time high figure was 200·0 in 1943. The maximum monthly index of 207·5 in 1948 was reached at Dec. 1; the figure was then slightly below the all-time high level of 208·3 at Dec. 1, 1943. The upward movement indicated in the Province as a whole extended to all major industries with the exception of logging, which showed a decline of 7·1 p.c. Employment in the textile and textile products industry, one of the largest employers of labour in the manufacturing group in this Province, increased by 4·9 p.c. The average weekly earnings of employees on the staffs of leading establishments in the eight leading industries in Quebec increased by 11 p.c. from \$34·64 in 1947 to \$38·45 in 1948, an advance which exceeded the general average.

The employment index for Ontario averaged 203·0 in 1948, a gain of 4·6 p.c. over the average for the preceding year. The index of 210·4 at Dec. 1, 1948, was the highest on record, which goes back to 1920. As in the Maritime Provinces and Quebec, there was expansion in all the major industrial groups except logging, in which the index of employment declined by 7·5 p.c. Shortages of gas and power during the winter months, and industrial disputes in the automobile parts industry in the summer and early autumn, hampered activity to some extent during 1948. The largest proportional increase in this Province over the preceding year was recorded in construction as shortages of materials and labour were overcome. The annual average of weekly earnings reported in Ontario was \$41·29 in 1948 as compared with \$37·11 for 1947.

Employment in the Prairie Provinces reached a new all-time high level at Dec. 1, 1948, when the index was 180·9. The average index for 1948, at 170·6, rose by 4·4 p.c. over the preceding year. Early in 1948, industrial disputes in the Alberta coal mines had a retarding effect on employment, but by the end of 1948 activity in all the major industrial groups with the exception of logging was at a higher level than at the same date in the earlier years. The greatest proportional gain in employment was recorded in construction, the annual index increasing by 10 p.c. over that for 1947. The per capita weekly earnings, as reported by the larger employers in the eight leading industries in the Prairie Provinces, increased from \$36·46 in 1947 to \$40·50 in 1948.

Although the situation in British Columbia was affected by disputes in coal mining in January and February, and later by the severe floods, the index of 216·2 at Sept. 1, 1948, was the highest on record. An increase over 1947 was noted in

all the major industrial groups except transportation, the largest taking place in trade. Employment in manufacturing rose by 2.8 p.c. in the year. The average weekly earnings in the eight leading industries in British Columbia stood at \$42.62 in 1948, compared with \$38.74 in the preceding year.

#### 6.—Index Numbers of Employment as Reported by Employers in Economic Areas, by Months, 1947 and 1948, with Yearly Averages, 1939-48

NOTE.—These indexes are calculated as at the first day of each month, on the base 1926=100. The relative weights show the proportion of employees reported in each economic area to the total reported by all employers making returns in Canada at Dec. 1, 1948. Averages for the years 1921-38 are given at pp. 613-614 of the 1947 Year Book.

Percentage distribution of employees reported in economic areas as at Dec. 1, 1948.....	7.3	29.7	41.8	11.8	9.4	100.0

**Employment and Payrolls by Cities.**—During 1948, as in 1947, the co-operating firms in the eight larger industrial centres employed over 43 p.c. of the total personnel of the reporting establishments throughout Canada. The proportion of the indicated payroll disbursements, however, declined fractionally in 1948. The composite index number of employment for the eight leading cities increased by 4 p.c. in 1948 compared with a gain of 4.2 p.c. in Canada as a whole

and 4.3 p.c. in the smaller cities and rural areas. Improvement was noted in all the major industrial groups in the eight larger cities taken as a unit. The changes in the indexes shown in Table 7 as compared with the preceding year were practically the same as those indicated for Canada as a whole in manufacturing, trade and the services industries for which statistics are available. The indexes for Canada showed greater expansion in communications and construction. The increase in the year in manufacturing (which is particularly heavily represented in the larger centres) amounted to 2.9 p.c. in the leading cities and to 3 p.c. in Canada as a whole.

As will be seen from Table 7, there was heightened industrial activity in all cities for which data are segregated, although the advances in the index numbers varied largely as a result of the industrial distribution of the reported employees. The largest percentage gains were in Quebec, Hamilton and Ottawa.

During 1948, the index of weekly payrolls in the larger centres taken as a unit averaged 15.3 p.c. higher than in the preceding year, as compared with the advance of 15.6 p.c. recorded in the general index number of payrolls in the same period. In 1947 the increases over 1946 had amounted to 19.8 p.c. in the cities and to 21.2 p.c. in the figure for Canada.

The index number of weekly salaries and wages in each of the leading cities rose by more than 12.5 p.c. in 1948 over the preceding 12 months. The largest percentage gains were noted in Hamilton, Quebec, Toronto and Vancouver, where the indexes rose by 20.6 p.c., 16 p.c., 15.9 p.c. and 15.9 p.c., respectively.

Statistics of average weekly wages of hourly-rated wage-earners in leading manufacturing establishments are published monthly for several of the larger industrial centres. In Hamilton and Toronto the average weekly wage increased by \$5.67 and \$4.59, respectively, in 1948 to reach new high levels of \$42.08 and \$38.49. The unusually high average weekly wages in Hamilton were mainly due to the industrial distribution of employees for whom statistics are available. The weekly wages indicated by the reporting factories in Vancouver averaged \$40.13, those in Winnipeg, \$37.09, and in Montreal, \$36.58. The average for Canada in 1948 was \$38.53, compared with \$34.13 in the preceding year.

#### 7.—Index Numbers of Employment as Reported by Leading Employers in certain Cities, by Months, 1947 and 1948, with Yearly Averages 1929 and 1939-48

NOTE.—These indexes are calculated as at the first day of each month on the base 1926=100. The relative weights show the proportion of employees reported in each city to the total reported by all employers making returns in Canada at Dec. 1, 1948. Averages for 1921-28, inclusive, are given at p. 772 of the 1938 Year Book and for 1930-38 at p. 615 of the 1947 edition.

Percentage distribution of employees reported in the leading cities at Dec. 1, 1948, to Canada totals as 100.....	14.5	1.5	13.2	1.3	3.2	1.9	3.4	4.2

**Employment and Payrolls by Industries.**—Increases in employment in 1948 as compared with the preceding year were reported in all the major industrial groups with the exception of logging. The highest percentage gain was that of 10.3 p.c. recorded in construction. The smallest advance in employment, amounting only to 2.6 p.c., was reported by transportation firms.

The 1948 annual index of employment in manufacturing generally as shown in Table 8 increased by 3 p.c. as compared with the annual index for 1947, which in turn had risen by 6.8 p.c. as compared with 1946 when the situation had been greatly affected by reconversion problems and by serious industrial disputes. Proportionally, the increase in 1948 as compared with the preceding year, was slightly greater in the heavy goods industries, namely, the manufacturing of iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products. The index in these industries taken as a unit advanced by 3.1 p.c. in the year, as compared with 2.1 p.c. in the remaining branches of manufacturing. Expansion was noted in all the main industries in the heavy goods group. Employment in the important iron and steel products industry increased by 2.7 p.c. in 1948. The index for agricultural implements rose by 17.8 p.c. with continued heavy demand for these products. In the non-durable manufacturing group some declines were recorded, namely, in leather, edible plant, rubber and tobacco products.

Expansion was noted in the remaining industries within this category. The employment index for textiles and textile products, an especially important employer of labour, mounted by 4.6 p.c.

The index of payrolls in manufacturing increased by 15.3 p.c. in 1948, when the durable goods industries showed a gain of 15 p.c. over 1947, and the non-durable, 14.9 p.c. The salaried employees and wage-earners on the payrolls of the co-operating factories earned an average of \$40.91 per week in 1948 compared with \$36.57 in 1947, \$32.65 in 1945, the last year of the War, and \$31.50 in 1943, when wartime activity in manufacturing had reached its peak. In comparing the average earnings in the various industries, as shown in Table 5, the sex, age and industrial distributions of the workers must be kept in mind.

There was some falling-off in employment in logging during 1948, the annual index, at 287.6, being lower than the 1947 figure of 309.1, but above the 1946 average of 268.5, the highest index up to that time. With the heavy demand for lumber for use in construction and in pulp and paper mills at home and abroad, employment has been relatively well maintained in recent years. The industry, which is unusually dependent upon weather conditions, was hampered by the low levels of water in certain areas in the autumn of 1948. The payroll index in logging increased by 2.5 p.c., over 1947, to reach a new all-time high. The average weekly earnings of the employees reported in 1948 were \$39.11 per week, almost \$4.00 above the 1947 average, and \$10.00 above the 1946 weekly figure.

The employment index for mining, after sagging for some years, stood at 173.6 in 1948, only three points below its 1941 maximum. Industrial disputes in western coal fields affected the situation to some extent in 1948, but were of less importance than in 1947. The index for metallic ores increased by 8.6 p.c., and for non-metallic minerals (excluding coal) by 12 p.c. The payroll index for mining as a whole rose by 24.2 p.c. in 1948. The average weekly earnings were \$48.77, being \$5.74 higher than in 1947.

Since 1939 employment in communications has risen steadily, the latest index, at 177.0, showing an increase of 7.7 p.c. over 1947. The greatest percentage gain was made in the telephone section. The weekly earnings in communications, in which the proportion of women workers is very high, averaged \$37.66 in 1948, as compared with \$34.42 in the preceding year. As in communications, employment in the transportation industry has steadily increased for some time. The annual index of employment for 1948 was 140.5, compared with 136.9 in 1947. The increase extended to all major sub-groups; the largest gain of 8.0 p.c. was in shipping and stevedoring. The annual index of payrolls in the transportation industries increased by 13.3 p.c. in 1948, while the per capita weekly earnings rose from \$44.16 in 1947 to \$48.61 in 1948.

Employment in construction and maintenance reached a maximum during 1948. In most areas, shortages of materials and labour were overcome; despite high prices, post-war building continued extremely active. The annual employment index for 1948 was 168.6, compared with 152.9 in 1947, while the payroll index in construction increased by 21.1 p.c. in the year. The average weekly earnings of persons on the payrolls of leading establishments in the construction industry as a whole were \$38.31 in 1948, as compared with \$34.86 in 1947. Employment in building construction showed a gain of 11.5 p.c. in the year, compared with advances of 10.8 p.c. in highway construction and 4.8 p.c. in railway construction. The payroll index for building construction increased by 23.5 p.c., and the average weekly earnings by \$4.00, to reach \$41.41 per week in 1948.

The employment index for the service industries for which monthly data are available (chiefly hotels, restaurants, laundries and dry-cleaning establishments) was 4.8 p.c. above the 1947 index. The average weekly earnings increased from \$23.48 in that year to \$25.87 in 1948. In considering these figures with those of other industries, it should be recalled that large proportions of women are employed in the above-named groups and part-time work is also frequent. The annual index of employment in trade increased from 207.1 in 1947 to 221.4 in 1948. There was a slightly larger percentage gain in the retail group. The per capita weekly earnings of persons reported in the latter industry, which also employs large numbers of women, young persons and part-time workers, rose from \$28.99 in 1947 to \$32.03 in 1948; in wholesale trade, the increase was from \$37.14 in 1947 to \$40.26 in 1948.

#### 8.—Index Numbers of Employment, by Industrial Groups and by Months, 1947 and 1948, with Yearly Averages, 1929 and 1939-48

NOTE.—These indexes are calculated as at the first day of each month, on the base 1926=100. The relative weights show the proportion of employees reported in each industry to the total reported by all employers making returns in Canada at Dec. 1, 1948. Averages for 1921-28, inclusive, are given at p. 773 of the 1933 Year Book and for 1930-38 at p. 617 of the 1947 edition.

<sup>1</sup> Consists mainly of hotels and restaurants, laundries and dry-cleaning establishments.

#### Subsection 4.—Earnings and Hours of Work of Male and Female Wage-Earners and Salaried Employees in Manufacturing\*

Annual surveys of hours and earnings of male and female salaried employees and wage-earners in manufacturing establishments which usually employ 15 or more persons were instituted in 1946, superseding somewhat similar surveys conducted by the Census of Manufactures from 1932 to 1945.† The two series are not entirely comparable; the earlier survey collected data from manufacturing establishments, regardless of size, for one week in the month of highest employment in each establishment, while the later series relates to one week in the autumn of each year and is limited to the larger establishments. Differences in industrial coverage and in material collected and tabulated also reduce the comparability of the two series. The more recent survey covers more than 86 p.c. of the employees in all manufacturing establishments in Canada.

The data published in Tables 10-12 relate to all salaried employees and wage-earners in the employ of larger manufacturers, except travelling salesmen, homeworkers, watchmen, charwomen and workers engaged on new construction. Proprietors and firm members were also excluded, as were employees engaged in the distribution of products where the sales offices were organized as separate units. Gross earnings were reported, including regular salaries and wages paid on a time or piece-work basis, regularly-paid commissions, incentive or production bonuses, overtime earnings, etc.

Tables 9 and 10 show the average hours worked and the average earnings of wage-earners and salaried employees of both sexes reported for the last week of November, 1946 and 1947, in Canada, in the eight larger provinces, and in the principal manufacturing industries. Significant increases in earnings occurred over the year, resulting, in the main, from upward wage adjustments and, in some cases, from increased cost-of-living bonuses. Other factors influencing the pay levels include the type and size of the manufacturing operation, the proportions of women employed, occupational variations, seasonal influences in many industries, the proportions of short-time, part-time and casual workers, the amounts of overtime work done, and the extent of labour turnover and absenteeism in the week reviewed. There are also variations related to the location of the establishment in areas where general pay levels tend to be above or below average. Provincial variations are closely related to the industrial distributions of the workers in the different provinces. Differences in type and size of the industrial units also affect salary levels, as well as varying requirements for highly-paid executive and professional personnel, the number of head offices and the organization of distributive operations.

Table 11 indicates the percentages women constituted of the wage-earners and salaried personnel in Canada and eight provinces, together with the proportions that women's earnings formed of men's earnings in November, 1946 and 1947. In making comparisons of the figures for each sex, it should be borne in mind that women are more numerous in the industries in which pay levels are below average, that their hours of work are frequently shorter, that part-time work and absenteeism are more common among women, and that they tend, on the average, to be younger and less experienced workers.

\* Prepared in the Employment Section, Labour and Prices Division, Dominion Bureau of Statistics.

† Figures derived from these surveys appeared at pp. 567-574 of the 1948-49 Year Book.

The percentage distribution of wage-earners of each sex in five main groups of hours worked is shown in Table 12. Provincial variations are related to the industrial distribution of the workers, to variations in the standard working week, and to seasonal and other differences in amounts of part-time, short-time and overtime work. It will be noted that almost a third of the women averaged less than 40 hours. There were no significant differences in hours of work of wage-earners in 1946 and 1947.

More complete information on hours and earnings of wage-earners and salaried personnel in the principal manufacturing industries in Canada, the provinces, and the 22 large industrial cities is provided in the Dominion Bureau of Statistics' publication, "Earnings and Hours of Work in Manufacturing".

### Subsection 5.—Unemployment as Reported by Trade Unions

Quarterly statistics on unemployment are compiled and published in the *Labour Gazette* by the Department of Labour. These are based at the present time, on returns received from about 2,500 local trade union branches, having an aggregate membership of over 500,000 workers. 'Unemployment' means involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or idle because of illness, are not considered as unemployed, while union members retired and members of unions involved in industrial disputes are excluded from the tabulation. As the number of unions making returns varies from one date to another, with consequent variation in the membership upon which the percentages of unemployment are based, it should be understood that the figures for each date have reference only to the reporting organizations.

### 13.—Percentages of Unemployment in Trade Unions, by Provinces, Half-Yearly, 1943-44 and Quarterly, 1945-48

NOTE.—For percentages of unemployment as at June 30 and Dec. 31 from 1915 to 1930, see p. 827 of the 1934-35 edition of the Year Book; for percentages from 1931 to 1942 see p. 751 of the 1946 edition. For monthly data from 1921, see successive issues of the Year Book commencing with the 1922-23 edition. Quarterly figures were first published for 1945.

## Section 4.—Unemployment Insurance

The Unemployment Insurance Act, which came into operation on July 1, 1941, applies to all employed persons with the following exceptions: workers in specified industries or occupations such as agriculture, forestry, fishing, lumbering and logging (unless in an area where the Commission has prescribed that persons employed in lumbering and logging shall be insured—limited at present to the Province of British Columbia), Armed Forces, permanent public service of the Federal Government, Provincial Governments and municipal authorities, private domestic service, private-duty nursing, certain director-officers of corporations, workers on rates other than hourly, daily or piece rates if earning more than \$3,120 per year and (except by consent of the Commission) employment in a hospital or charitable institution not carried on for gain. All employees paid by the hour, day or on piece rate (including a mileage rate) are insured regardless of amount of earnings, together with all employees who receive \$3,120 or less per year under weekly, monthly or yearly rates.

**Unemployment Insurance Fund.**—Both employers and employees contribute to the Fund, the total paid by each group being approximately equal. The Federal Government contributes an amount normally equal to one-fifth of the combined employer-employee contributions and assumes the cost of administration. From July 1, 1941, to June 30, 1949, employers and employees contributed \$565,377,652 to the Fund and the Federal Government added \$113,077,626. Interest and profit on sale of securities amounted to \$50,900,147 and fines of \$27,703 made a total revenue of \$729,383,128.

Benefits first became payable on Jan. 27, 1942, and from that date to June 30, 1949, total benefit payments amounted to \$184,875,895, leaving a balance of \$544,507,234 in the Fund. Reserves of the Fund are invested in Dominion of Canada bonds and, at the end of 1948, the par value of bonds held amounted to \$504,887,500.

WEEKLY RATES OF CONTRIBUTION AND BENEFIT UNDER THE UNEMPLOYMENT INSURANCE ACT

Class	Earnings	Weekly Contributions <sup>1</sup>		Denomina- tion of Stamp <sup>2</sup>	Weekly Benefits <sup>3</sup>	
		By Employee	By Employer		Single Person	Person with One or More Dependants
		cts.	cts.	cts.	\$	\$
0	Less than 90 cents a day or under 16 years of age.....	4	18 cents paid on his behalf by employer <sup>4</sup>	18	4	4
1	\$ 5.40 to \$ 7.49 per week .....	18	12	30	4.20	4.80
2	\$ 7.50 to \$ 9.59 " .....	24	15	39	5.10	6.30
3	\$ 9.60 to \$11.99 " .....	24	18	42	6.00	7.50
4	\$12.00 to \$14.99 " .....	24	21	45	7.20	9.00
5	\$15.00 to \$19.99 " .....	24	24	48	8.10	10.20
6	\$20.00 to \$25.99 " .....	30	30	60	10.20	12.90
7	\$26.00 to \$33.99 " .....	36	36	72	12.30	15.60
8	\$34.00 or more " .....	42	42	84	14.40	18.30

<sup>1</sup> The daily rate of contribution in respect of each class is one-sixth of the weekly rates. <sup>2</sup> Unemployment insurance stamps combine both employer and employee contributions. <sup>3</sup> Rates calculated on assumption that the person is in the same class for the last 180 days in the two years preceding claim. Daily benefit for an insured person without dependants is 34 times the average of his 180 most recent daily contributions, and 45 times the average daily contribution less ten cents per day in the case of a person mainly or wholly maintaining one or more dependants. The daily rate is one-sixth of the weekly rate. <sup>4</sup> Workers in this class make no contributions (the contributions being wholly borne by the employer) and are not eligible for benefit. They may, however, accumulate benefit rights on the basis of the employer contributions.

No benefit is payable during the first nine days of unemployment in a benefit year. After that time, the duration of benefit is related to the employment and contribution history of the employee, the number of days' benefit being equal to one-fifth the number of contribution days during the previous five years, less one-third the number of benefit days in the previous three years. Insurance benefit is paid as a right on fulfilment of four statutory conditions:—

- (1) The payment of not less than 30 weekly (or 180 daily) contributions within two years, while in insured employment. (The two-year period may be extended in certain circumstances.)
- (2) Not more than 50 p.c. of contributions within one year preceding the claim being at the lowest rate specified in the Second Schedule.
- (3) Proper presentation of claim.
- (4) Claimant being at least 16 years of age.

Disqualifications for benefit include: loss of work due to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or an institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be made if an employee is discharged by reason of his own misconduct or leaves the employment voluntarily without just cause or refuses suitable employment.

**Statistics of Unemployment Insurance.\***—Benefits under the Unemployment Insurance Act first became payable late in January 1942 but no applications for benefit were received until early February. Except for unusual periods such as the months following the cessation of hostilities in Europe in the spring of 1945, monthly totals of claims received have shown a definite seasonal variation, rising in the late autumn and winter and falling again in the spring. Monthly averages of initial and renewal claims filed have been as follows: 1942, 2,244; 1943, 3,055; 1944, 7,575; 1945, 24,699; 1946, 40,722; 1947, 36,904; 1948, 54,091.

Since September 1943 a record has also been maintained of the number of claims on the live unemployment register on the last working day in each month. This provides a measure of recorded unemployment among insured persons on one day of each month. Monthly averages of ordinary claims on the live register at the end of the month have been: 1944, 10,454; 1945, 41,139; 1946, 96,760; 1947, 68,254; 1948, 88,909.

Monthly statistics on the operation of the Unemployment Insurance Act also provide data on the number of days that claims on the live unemployment register at the end of each month have been continuously on the register, the number of claimants considered entitled and not entitled to benefit, chief reasons for non-entitlement, number of beneficiaries, number of days benefit paid and amount of benefit paid.

In addition to the monthly material on the operation of the Act, annual tabulations of the persons employed in insurable employment are prepared from returns covering the book exchange at Apr. 1, and annual data are published on benefit years established and benefit years terminated.

The number of persons insured under the Unemployment Insurance Act, shown in Table 14, was assumed to be those working in insurable employment as at Apr. 1, as indicated from returns on those receiving insurance books and contribution cards at that time. It should be noted that the industrial classification presented in Table 14 and in Table 19 is different from that used heretofore. These data are now compiled using the Canadian Standard Industrial Classification Manual which has been adopted by all Federal Government agencies.

Table 15 presents information on the persons for whom current benefit years were in existence during 1947. A benefit year is established under the Unemployment Insurance Act when an insured person, upon becoming unemployed, submits a claim and proves that at least 180 daily contributions have been made on his behalf during the preceding two years. Because of other provisions of the Act or because he may regain employment before he actually receives benefit, the setting up of a benefit year does not necessarily result in the receipt of benefit payments. When a benefit year is established it means, merely, that the claimant's right to receive benefit at a certain rate at any time during the succeeding twelve months is determined. Thus, although 512,191 persons held benefit years current in 1947, only 283,725 actually drew benefit in that year.

The benefit year remains in existence either until the authorized benefit rights are exhausted or until 12 months have passed since the date of its establishment, whichever occurs first. Some benefit years established in 1946 were carried over into 1947 so that, although 265,117 persons established benefit years in 1947, a total of 512,191 persons held benefit years currently available in 1947.

\* Statistics of Unemployment Insurance are compiled and published by the Unemployment Insurance Section, Labour and Prices Division, Dominion Bureau of Statistics, from material supplied by the Unemployment Insurance Commission.

The amount of benefit paid, as presented in Table 15, is secured by multiplying each daily rate of benefit by the number of days paid at that rate on the cards representing benefit years upon which benefit was drawn in 1947.

In Table 16, the persons with current benefit years in 1947 are classified according to the number of benefit days paid. Table 17 classifies those who drew benefit by the daily rate at which they were paid. The daily rate of benefit is determined by the amount of the daily average contribution paid on behalf of the claimant during the past two years and by whether or not he has a dependant within the meaning of the Act.

The persons who established benefit years in 1947, those whose benefit years terminated in 1947, with those whose benefit years terminated by exhaustion of rights, shown separately, are classified by age groups in Table 18. In Table 19 the persons who established benefit years in 1947 and the benefit days paid on those benefit years are presented by industrial group and age.

Table 20 classifies those who established benefit years in 1947 and the days paid on those benefit years by occupation groups. The classification of occupations used in this Table is that designed for the Census of the Prairie Provinces, 1946.

A more detailed analysis of these data, by sex and province, is available in the publication "Annual Report on Current Benefit Years Under the Unemployment Insurance Act" issued by the Dominion Bureau of Statistics.

#### 14.—Persons Insured under the Unemployment Insurance Act, classified by Industrial Groups and Sex, 1946 and 1947

NOTE.—These figures include only those who exchanged an unemployment insurance book or were issued a book for the first time in April. They therefore represent an estimate of the number employed in insurable employment as at Apr. 1.

<sup>1</sup> Subject to adjustment for errors and omissions in final payments. The total of this column is the summation of the benefit paid to each individual during the calendar year. This is the accepted annual figure to be used in conjunction with the data on persons establishing benefit years and benefit days paid, and is obtained from the daily rate authorized at the time the benefit year is established and the number of benefit days paid during the calendar year. This total is less than the total of the 12 monthly figures published for the year 1947. The difference, 2.8 p.c., is due largely to the fact that the daily rate for some claimants changes during the life of the benefit year as the claimant gains or loses a dependant within the meaning of the Act.

**Employment Service.**—The Unemployment Insurance Commission operates a free employment service under authority of the Unemployment Insurance Act, 1940. The public employment offices, which had functioned under a joint Dominion-Provincial arrangement for more than two decades, were taken over on Aug. 1, 1941, and added to by the Commission in all provinces except Quebec. The Commission also established offices in Quebec and the Provincial Government thereupon reduced the number of its own offices.

## Section 5.—Vocational Training\*

During 1948, the Federal Department of Labour, in co-operation with the Provincial Governments, carried on various training projects under the Vocational Training Co-ordination Act, 1942: (1) youth training; (2) assistance to students; (3) apprenticeship training; (4) training of workers released from gainful employment; (5) vocational training on the secondary school level; (6) training of military personnel; (7) training of discharged members of the Forces.

In regard to the last-named project, discharged members of the Forces are approved for vocational training by the Department of Veterans Affairs, but the Department of Labour is responsible for setting up training centres and carrying out the training.

The Vocational Training Advisory Council, appointed under the authority of the Act, continues to advise the Minister on the general aspects of training plans. This Council is representative of employers, organized labour, vocational education authorities, veterans' and women's organizations.

### Subsection 1.—The Vocational Training Program of the Department of Labour

Table 22 shows the allotment of federal funds to the provinces for the year ended Mar. 31, 1949, and the total payments made by the Federal Government against these allotments up to Apr. 30, 1949.

#### 22.—Federal Government Allotments for Vocational Training for the Year Ended Mar. 31, 1949, and Claims Paid to Apr. 30, 1949, by Provinces

Province	Youth Training		Training of Discharged Members of the Forces		Apprentice Training

<b>Totals.....</b>	<b>378,000</b>	<b>334,275</b>	<b>1,982,000</b>	<b>968,528</b>	<b>410,000</b>	<b>255,259</b>

**Youth Training.**—Each province submitted to the Department of Labour a list of the various courses proposed for Youth Training. These, on approval by the Minister of Labour, were incorporated into appropriate schedules which set forth the regulations governing the operation of the different courses. As in previous years, the training consisted, for the most part, of various general and specialized courses for rural young people in agriculture, home craft and handicrafts, and other related subjects.

\* Full information on this subject is given in the "Canadian Vocational Training Annual Report of 1948-49".

**Assistance to Students.**—Under the Youth Training Division of the Vocational Training Agreement with each province, assistance was provided for nurses-in-training at hospitals and students in courses leading to a university degree, who had good academic standing but who, without financial assistance, could not continue training. At the discretion of the provincial authorities, assistance could be given in the form of a grant or a loan, or a combination of the two.

The value of Federal Government assistance to students at universities and nurses-in-training may be assessed from the following approximate amounts which have been paid to the provinces for that purpose during the past ten years:—

<i>Province</i>	<i>Amount</i>	<i>Province</i>	<i>Amount</i>
	\$		\$
Prince Edward Island.....	18,110	Manitoba.....	22,900
Nova Scotia.....	45,125	Saskatchewan.....	133,515
New Brunswick.....	88,760	Alberta.....	83,265
Quebec.....	566,235	British Columbia.....	188,455
Ontario.....	212,955		

During the fiscal year 1948-49 Federal Government expenditures for assistance to students and nurses amounted to \$128,483 in the form of grants, and \$75,853 in the form of loans. Financial help was given to 440 nurses-in-training and 2,200 students at universities. Included in the total number of university students were 406 taking courses in medicine, 88 in dentistry, 391 in engineering, 64 in agriculture, and 777 in arts and science.

**Apprentice Training.**—Apprenticeship Acts are in force in all provinces, and agreements for federal assistance are in effect with all except Prince Edward Island and Quebec. During 1948 some additional trades were brought within the Apprenticeship Acts.

With the approaching completion of Veteran Training, it has been possible to give increased attention to the promotion of apprenticeship. Particular attention has been given to the building trades, because the construction industry has pointed out that it will be greatly handicapped unless the number of skilled mechanics can be substantially increased. The Training Branch has maintained close contact with the Canadian Construction Association and the National Joint Conference Board of the Construction Industry on matters pertaining to apprenticeship in the building trades. However, in spite of the efforts that have been put forward by the Training Branch and the provinces on behalf of apprenticeship generally, the number of apprentices registered in the seven provinces with which the Department of Labour has an Apprenticeship Agreement was reduced from 11,902 on Mar. 31, 1948, to 10,976 on Mar. 31, 1949. There has been a very large decrease in the number of veterans under apprenticeship, that has not been compensated for by young men going into the designated trades.

A conference of Directors of Apprenticeship was called by the Department of Labour in October, 1948, and was attended by the Provincial Directors of Apprenticeship from all provinces except British Columbia. Information and suggestions were exchanged and among the results was one concerning the class training of apprentices. The conference expressed itself as favourable to the introduction of pre-employment training, somewhat along the lines that were followed in the case of veterans, when trainees were admitted to full-time class training for a period of approximately six months before they went to an employer. The

Federal Government has authorized this type of training and its adoption is optional with each province. The principle of pre-employment class training has been accepted by all provinces with which there is an agreement, except Saskatchewan.

The amounts spent by the Department of Labour under the Apprenticeship Agreements are shown in Table 22 on p. 701.

**Training of Unemployed Persons.**—Agreements completed in 1945 between the Federal Government and certain provinces provided for the training or retraining of workers who had been released from employment. Under these agreements, the Federal Government undertook to pay approximately 75 p.c. of the costs of training workers selected by representatives of the Provincial Governments and the National Employment Service.

An amendment to the Canadian Vocational Training Co-ordination Act in 1948 expanded the provisions for the training of unemployed persons so that those who were not in receipt of unemployment insurance benefit would be eligible. As a result greater authority and responsibility were given to the provinces in the selection of trainees, the decision in regard to starting classes, and the operation of such classes. The approved costs under the new arrangement were shared equally between the provinces and the Federal Government, with each province recommending to the Minister of Labour the scale of training allowances that should be paid.

Although the schedule covering the training of unemployed persons was accepted by all provinces, training was not carried out in Prince Edward Island, Quebec or Ontario, where it was considered that the necessity for it had not developed.

The fact that employment remained at a high level throughout 1948 resulted in rather slow development of the training for unemployed persons. At Mar. 31, 1949, 190 persons were training under this schedule in Nova Scotia, 82 in New Brunswick, 123 in Manitoba, 53 in Saskatchewan, 106 in Alberta, and 10 in British Columbia, making a total of 564.

Federal expenditures for this type of training during the fiscal year 1948-49 amounted to \$165,849.

**Vocational Training at the Secondary School Level.**—Ten-year agreements have been completed with all provinces, covering federal assistance for vocational training at the secondary school level. Each province is given an annual outright grant of \$10,000. In addition, \$1,910,000 is allotted each year among the provinces in proportion to the number of young persons in each province who are in the age group 15 to 19 years. The agreements provide for a further contribution of \$10,000,000 to be allotted on the same basis, and to be available, up to Mar. 31, 1952, for capital expenditures on approved projects for buildings and equipment. From the foregoing it will be seen that the total amount of federal money involved in this plan is \$30,000,000. With the exception of the \$10,000 outright grant to each province each year, Provincial Governments must contribute amounts equal to the contributions of the Federal Government.

The Vocational Schools' Assistance Agreement has been responsible for a great expansion in vocational training. New schools have been built and equipped, and many additions to existing schools have been provided. The Vocational Training Program generally has been improved and made available to a much larger proportion of the youth of the country. As examples, new technical

schools are under construction at Halifax, Yarmouth, Winnipeg and Vancouver, the last named at a cost of over \$1,500,000. In Quebec, 16 new schools or additions to existing schools have been constructed and are already in operation.

Up to Mar. 31, 1949, the end of the fourth year of this agreement, federal expenditures on the construction and equipment of new vocational schools have amounted to approximately \$4,022,925. During the same period federal contributions towards maintenance and operating costs of vocational schools, both municipally and provincially owned, amounted to approximately \$6,560,945.

**Training of Military Personnel.**—Although no specific schedule of the Vocational Training Agreement provided for the training of Navy, Army and Air Force personnel, that type of training was again carried out quite extensively during 1948. Canadian Vocational Training, in co-operation with the provinces, has been training army personnel as motor mechanics, vehicle mechanics, sheet metal workers, welders, machine tool operators, draftsmen, radio mechanics, clerks, kitchen organizers and in various building trades.

**Training of Discharged Members of the Forces.**—During 1948 the training of discharged members of the Forces was carried on under the Vocational Training Agreement, which was in effect in all provinces. As in previous years, training was carried out in co-operation with the provincial authorities, and was given to those veterans who were approved for it by the Department of Veterans Affairs. Throughout the year close relations were maintained with the Department of Veterans Affairs and with the National Employment Service, both at head office and in the field.

The training of veterans was a steadily diminishing responsibility of the Training Branch during 1948. At Mar. 31, 1948, 4,993 veterans were undergoing training; by Mar. 31, 1949, the number had been reduced to 424. The Vocational Training Program for veterans had been practically completed by the middle of 1949 without any serious complaints from veterans or from the employers of veterans who were trained under the Program. The number of veterans trained by the Department of Labour up to Mar. 31, 1949, totalled 134,444. The expenditures made by the Federal Government, which bore the full cost of Veteran Training, amounted, up to the same date, to \$25,462,502.

### **Subsection 2.—Vocational Training of Veterans\***

The vocational training of veterans which was authorized under the provisions of the Veterans Rehabilitation Act and under which more than 90,000 veterans were approved for training to assist in their rehabilitation in civil life, has, apart from some types of long-term training, come to a close. From a peak of 40,422 veterans in training in November, 1946, the numbers have shown a steady decline until, at the end of May, 1949, only 4,076 veterans were in training.

By Order in Council 5983, dated Dec. 29, 1948, authority was granted to provide vocational training under the Veterans Rehabilitation Act, Sect. 7, to certain young men under 30 years of age, who had served in the Merchant Marine and who had not been effectively rehabilitated. By June 30, 1949, some 269 persons had been approved for training and 85 had actually commenced their training under this authority.

\* Revised under the direction of the Deputy Minister, Department of Veterans Affairs.

The vocational training of veterans has been used as a means of rehabilitation by approximately 10 p.c. of all the veterans of the Second World War. The true value of the program will be determined by the value of these trainees to the national production over the next 30 to 35 years.

## Section 6.—Industrial Accidents and Workmen's Compensation

### Subsection 1.—Fatal Industrial Accidents

Statistics of fatal industrial accidents have been compiled by the Federal Department of Labour since 1903. The data are now obtained from provincial Workmen's Compensation Boards, the Board of Transport Commissioners and other Government authorities, from departmental correspondents and press reports.

#### 23.—Fatal Industrial Accidents, by Industries, 1945-48

**Causes of Fatal Accidents.**—Preliminary figures indicate that during 1948, 397 fatal accidents to gainfully employed persons were caused by moving trains, vehicles, etc. Falls of persons caused 221 fatalities and falling objects 214. Other fatal accidents included 157 caused by dangerous substances, 38 by striking against or being struck by objects, 35 by working machines, 21 by animals, 20 by hoisting apparatus, 19 by prime movers, 12 by handling objects, and 6 by tools. Included in the category "other causes" were 210 fatalities of which 156 were due to industrial disease, strain, etc. The number of accidents, fatal and non-fatal, dealt with by the provincial Workmen's Compensation Boards are shown in Subsection 2.

### Subsection 2.—Workmen's Compensation\*

In all provinces legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment, or by a specified industrial disease, except where the workman is disabled for less than a stated number of days. The Acts of all provinces except Newfoundland provide for a compulsory system of collective liability. Under the Newfoundland Act, each employer is individually liable to pay for compensation and medical aid for accidents which occur in the course of employment. Under the collective liability system, to ensure payment of compensation, each provincial Act provides for an accident

\* More detailed information is given in "Workmen's Compensation in Canada, A Comparison of Provincial Laws," issued by the Department of Labour.

fund, administered by the province, to which employers are required to contribute at a rate determined by the Workmen's Compensation Board in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. In Ontario and Quebec, public authorities, railway and shipping companies, and telephone and telegraph companies are individually liable for compensation as determined by the Board, and pay a proportion of the expenses of administration. A federal Act provides for compensation for accidents to Federal Government employees according to the conditions laid down by the Act of the province in which the accident occurs. Seamen who are not under a provincial Workmen's Compensation Act are entitled to compensation under the Merchant Seamen Compensation Act, 1946.

Free medical aid is given to workmen during disability in all provinces.

Compensation is payable in all provinces for anthrax and for poisoning from arsenic, lead, mercury and phosphorus and silicosis is compensated under certain conditions. Other diseases compensated vary according to the industries of the provinces.

**Scope of the Workmen's Compensation Acts.**—The Acts vary in scope but in general, they cover construction, mining, manufacturing, lumbering, fishing, transport and communications and the operation of public utilities. Undertakings in which not more than a stated number of workmen are usually employed may be excluded, except in Alberta. In Newfoundland the compensation legislation applies, in general, to persons employed under a contract of service or apprenticeship. In the following paragraphs information is given regarding all provinces except Newfoundland which receives separate treatment at p. 708.

**Benefits.**—Under each Act, a fixed period must elapse between the date of the accident and the date when compensation begins but in all cases medical aid is given from the date of the accident. This waiting period varies from three to seven days and in all provinces compensation is paid for the waiting period, if disability continues beyond it.

At present, compensation in fatal cases is paid as follows:—

Burial expenses, \$150 in Nova Scotia, New Brunswick, Manitoba and British Columbia, \$175 in Quebec and Alberta, \$125 in Ontario and Saskatchewan, and \$100 in Prince Edward Island. In certain cases costs of transporting the body are also allowed.

To a widow or invalid widower, or to a foster mother, as long as the children are under the age limit, a monthly payment of \$50 is made in Nova Scotia, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia, of \$45 in Quebec, and of \$40 in Prince Edward Island and New Brunswick; in addition a lump sum of \$100 is paid in all provinces.

For each child in the care of a parent or foster mother receiving compensation, a monthly payment of \$10 is made in Prince Edward Island, New Brunswick and Quebec; of \$12 in Ontario, Manitoba and Saskatchewan; of \$12.50 in Nova Scotia and British Columbia and of \$15 in Alberta. In Alberta an additional payment of \$10 a month is made, and in British Columbia the monthly payment of \$12.50 is continued to children between 16 and 18 years of age who are attending school.

To each orphan child, \$25 a month is paid in Saskatchewan, \$22.50 in Nova Scotia, \$20 in Prince Edward Island, New Brunswick, Ontario, Manitoba and British Columbia and \$15 in the other provinces (in Alberta, an additional payment

not exceeding \$10 a month may be given), with a maximum of \$90 per month to one family in Nova Scotia.

Except in the case of invalids, payments to children are not continued beyond the age of 16 in Prince Edward Island, Nova Scotia, Ontario, Manitoba and Saskatchewan, 18 in Quebec, Alberta and British Columbia, and in New Brunswick 18, or the age when they leave school. In Prince Edward Island, Nova Scotia, Ontario, Manitoba and Saskatchewan payments for children may be made up to the age of 18 if it is desirable to continue their education. In Manitoba and British Columbia payments to invalid children are continued until recovery, while the other provinces make payments only for the length of time the Boards consider that the workman would have contributed to their support.

Where the only dependants are persons other than consort or children, all the Acts provide that compensation is to be a reasonable sum proportionate to the pecuniary loss but the total monthly sum to be paid to all such dependants is limited to \$100 in Ontario, \$60 in Manitoba, \$85 in Alberta, \$45 in Prince Edward Island and Nova Scotia and \$55 in British Columbia. In British Columbia, however, if there are also dependants such as a widow, an invalid widower or children, the maximum payable to other dependants is \$40 per month. In all provinces, compensation to dependants other than consort or children is continued only for such time as the Board considers that the workman would have contributed to their support.

Except in Ontario, Saskatchewan, Alberta and British Columbia, maximum benefits payable to dependants in case of death of the workman are two-thirds of the earnings. In Ontario and Saskatchewan the average earnings are the maximum amount payable.

The minimum payable to a consort and one child in Quebec is \$55 per month, \$65 if there is more than one child; in Manitoba the minimum is \$12.50 per week, or if there is more than one child, \$15 per week. In Saskatchewan a widow with one child must be paid at least \$62 a month and if there are more children, \$70.

The rate for total disablement in all provinces except Ontario and Saskatchewan is a weekly payment for its duration equal to  $66\frac{2}{3}$  p.c. of the average weekly earnings; in Ontario and Saskatchewan it is 75 p.c. Except in New Brunswick, the Acts fix minimum sums that must be paid. The weekly minima are \$12.50 in Prince Edward Island and British Columbia, \$15 in Nova Scotia, Quebec, Manitoba, Saskatchewan and Alberta. In Ontario the minimum is \$100 a month. If, however, average earnings fall below such minima, a sum equal to earnings is paid in all provinces except Nova Scotia and Saskatchewan. For partial disablement, similar provision is made in all provinces except New Brunswick, Ontario, Saskatchewan and Alberta, i.e., two-thirds of the difference in earnings before and after the accident. In Ontario and Saskatchewan it is 75 p.c. of the difference. In New Brunswick and Alberta, the amount is determined by the Board according to the impairment of earning capacity, but in New Brunswick two-thirds of the diminution of earnings is payable for temporary partial disablement. In all provinces except British Columbia, if the difference is 10 p.c. or less, and in New Brunswick in any case where the Board considers it would be to the advantage of the workman, a lump sum may be given.

The average earnings on which compensation is based must not exceed \$3,000 in Ontario and Saskatchewan, and \$2,500 in all the other provinces. If the workman's earnings at the time of the accident are not considered a proper basis for compensation, the Board may use as a basis the average earnings of another person in the same grade of work. Compensation paid workmen under 21 years of age may

be raised later, if it appears likely that their earning power would have increased had the injury not occurred.

Under Newfoundland's individual liability system, the Act of 1948 makes the employer liable to pay compensation for death or injury by accident and for disability or death caused by certain industrial diseases. In fatal cases, compensation is a lump sum calculated in accordance with rules set out in the Act but such lump sum together with the additional allowances provided for dependants under 16 may not exceed \$6,000. Weekly payments may be made for disability. In cases of total disability, payments may not exceed 50 p.c. of the workman's average weekly earnings, and in cases of partial disability, compensation is a proportionate amount, according to the diminution of average earnings. One-sixth of such weekly payment may be paid as a supplementary allowance for each child under 16, but the total of such allowances and the weekly payment may not exceed 75 p.c. of average earnings in case of total disability and 75 p.c. of the diminution of earnings in case of partial disability.

The statistics of workmen's compensation published by the provincial boards are not on a comparable basis and are therefore presented in a series of tables.

#### 24.—Operations of the Nova Scotia Workmen's Compensation Board, 1939-48

NOTE.—Estimates for outstanding claims are not included. Statistics for the years 1917-35 are given at p. 757 of the 1938 Year Book; those for 1936-38 at p. 642 of the 1947 edition.

## Section 7.—Wages and Hours of Labour

### Subsection 1.—The Regulation of Wages and Hours of Labour

The regulation of wages and hours of persons in private employment in Canada is within provincial jurisdiction, and all the provinces, except Prince Edward Island, have legislation on the subject. The Nova Scotia Male Minimum Wage Act, 1945, has not been proclaimed in force.

In Nova Scotia the minimum wage law applies only to women, while in Ontario, though the Act applies to both sexes, the Orders apply only to women. In Manitoba and Alberta there are separate Orders for men and women and also in British Columbia but in the latter Province certain Orders cover both sexes. In Quebec and Saskatchewan, Orders apply to both sexes. The first two Orders under the New Brunswick Minimum Wage Act, 1945, applying to women workers in hotels and restaurants and in shops became effective in 1948. Under the Newfoundland Labour (Minimum Wage) Act, 1947, an Order governing bus-drivers in the city of St. John's was issued in September, 1949.

In Quebec, under the Collective Agreement Act, hours and wages, and also apprenticeship, vacations with pay and family allowances provisions established by a collective agreement voluntarily entered into by employers and trade unions or groups of employees may be made legally binding by Order in Council on all employers and employees in the industry in the district covered by the agreement, if the parties are sufficiently representative of the industry. At Mar. 31, 1947, 96 agreements had been generalized to apply either throughout the Province or to a certain district. These agreements covered 258,000 work people and 22,000 employers. The agreements in force throughout the Province apply to the following industries: building materials; the manufacture of women's cloaks and suits, dresses, millinery, men's and boys' clothing, men's and boys' hats and caps, fine gloves and work gloves, shoes, furniture, paints, corrugated and uncorrugated paper boxes; the tanning industry and the lithographing industry and elevator construction. Other agreements concern industries in particular cities or parts of the Province including all building trades and printing trades in the large urban centres and many rural districts. In 1948, eight new agreements were extended for the first time and eight affecting longshoremen and municipal employees were repealed.

The Industrial Standards Acts of New Brunswick, Nova Scotia, Ontario and Saskatchewan and the Alberta Labour Act provide that wages and hours agreed upon at a conference of representatives of employers and employees called by the Minister of Labour or his representative may be made legally binding by Order in Council on the industry in the area concerned. The Nova Scotia Act applies only to construction work at Halifax, Dartmouth and Sydney.

In Nova Scotia, eight schedules for individual building trades, six in one zone which were renewals of previous schedules and two in another made for the first time in 1948, were in effect at the end of 1948. In New Brunswick, schedules made in 1948 for two building trades in one zone replaced earlier schedules.

In Ontario, there were 130 schedules in force at the end of 1948. Throughout the Province, schedules were in effect for brewery workers, cloakmakers, the men's and boys' clothing industry and the hard furniture industry. In the construction industry, one schedule covered several building trades in one city, and 53 schedules, each for a single trade in a single locality, covered one or more trades in 27 localities. In other industries also, schedules were in effect only for certain zones: for bakers in one zone, for soft furniture manufacturing in one, for coal hoisting in one, for the

coal industry in one, for taxi drivers in one, for the retail gasoline service industry in four and for barbers in 63 zones. Of the above, six were schedules made for the first time in 1948.

In Saskatchewan, 16 schedules were in effect at the end of 1948. These included one for barbers covering the whole province; others covered bakers, carpenters, electrical workers, painters, garage and service station employees, jewellery workers, shoe repairers and beauty culture operators, in one or more areas. During 1948, one new schedule was made binding and 12 were rescinded.

In Alberta, 22 schedules were in effect at the end of 1948. These included in one or more areas, bakers and bakery salesmen, foundry workers, certain individual building trades, dairy employees, garage and service station employees, radio service employees, laundry and dry-cleaning employees and barbers. During the year, two new schedules were made binding and five were revoked.

Part II of the Manitoba Fair Wage Act provides similar machinery for fixing wages and hours in any business, trade or undertaking, except agriculture. Under this legislation, Orders in Council have been passed fixing wages and hours for the baking industry and for the barbering and hairdressing trades.

Legislation in all provinces, except Prince Edward Island, which applies to mines, factories and, in some cases, to shops, restricts the hours of work of women and young persons or, in some provinces, of all workers. In Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia, there are also statutes dealing only with hours of work. The Nova Scotia Act is not in force. Several Minimum Wage Acts give authority for the regulation of hours as well as wages.

**Minimum Wage Regulations.**—Table 32 shows the minimum rates in effect in June, 1949, for several classes of establishments in the principal cities. In Alberta and British Columbia the rates for all workers, in Manitoba the rates for men, and in New Brunswick the rates for women, apply throughout the Province. In other provinces, and with respect to women in Manitoba, lower rates are in effect outside each of the indicated urban areas of the Province. The rates given apply to the hours specified or, except at Montreal and Winnipeg, to the normal work-week of the establishment, if less.

Offices.....	15-00	—	35	16-80	19-50	21-00	18-00	18-00 <sup>1</sup>

<sup>1</sup> Females only. <sup>2</sup> Females; 50 cents for men applying to 48-hour week. <sup>3</sup> Rates apply to 36 hours or more. <sup>4</sup> Females; \$25 for men over 21 years. <sup>5</sup> In hotels, beauty parlours, theatres and amusement places, rates apply to 40 hours or more; in shops to 39 hours or more; and in offices to 36 hours or more. <sup>6</sup> Rates apply to 48 hours in factories and offices, except in specified cases, and in laundries; 54 hours in shops, beauty parlours and theatres; 60 hours in hotels. <sup>7</sup> Hourly rates. <sup>8</sup> Females; \$18 for men over 21 years. <sup>9</sup> Kitchen help, 35 cents; cooks, 40 cents.

**Regulation of Hours and Annual Holidays.**—In Ontario and Alberta there is a maximum eight-hour day and 48-hour week for the workers to whom the statutes apply. In British Columbia hours are limited to eight in a day and 44 in a week. In Saskatchewan a 1947 Act requires time and one-half to be paid for work after eight hours daily and 44 hours weekly. This Act covers all workers employed in, or within a five-mile radius of, any city, workers in all factories in the Province, and in shops and offices in the towns or villages within the scope of Minimum Wage Orders. In the other three above-mentioned provinces the Acts apply to most workers, except farm labourers and domestic servants.

A 1949 Manitoba Act requires time and one-half to be paid for work done after eight hours in a day and after 48 hours in a week for men workers and 44 for women. The Act covers most industrial workers in the Province.

In all provinces that have Acts regulating hours longer hours may be worked in an emergency or by permission of the administrative authority.

In Nova Scotia and Alberta time and one-half is payable for all work in excess of 48 hours or of the regular work-week if less, but in Nova Scotia the provision applies only to women and only where the legal minimum rate is being paid. In British Columbia time and one-half must be paid after 44 hours. In most classes of industrial establishments in Quebec, time and one-half is payable after 48 hours. In hotels and restaurants and other workplaces in the larger towns and villages of Saskatchewan time and one-half is payable after 48 hours.

Six provinces have provided for annual holidays with pay for work people in most industries. In five of these provinces—Quebec, Ontario, Manitoba, Alberta and British Columbia—workers are entitled to a week's holiday with pay after a year of employment. Two weeks' holiday is given in Saskatchewan after a year of employment and, in Alberta, after two years of employment. A worker employed for less than a year is entitled, in Quebec, to a half-day for each month of employment and in Saskatchewan to one day for each month.

Coal miners in Alberta are entitled to a one day holiday with pay for every 20 days worked in a month but not more than two weeks holiday in a year.

Excluded from the holiday provisions are farm workers in all provinces, and domestic servants in all but Manitoba and Saskatchewan. The Manitoba Act also excludes independent contractors and railway and express companies under federal jurisdiction. In addition Quebec exempts building trades, forest operations, public corporations, janitors and watchmen and certain part-time workers; Ontario, professional workers, funeral directing and embalming; Manitoba and Saskatchewan, ranching and market gardening; and British Columbia, horticulture.

### **Subsection 2.—Statistics of Wage Rates and Hours for Various Classes of Labour\***

Statistics of rates of wages and hours of labour have been collected for many years by the Federal Department of Labour and are published in the *Labour Gazette* and, later, in annual reports supplementary to the *Labour Gazette*. The first report was issued in 1921 but the records begin, in many cases, with the year 1901. The index numbers show the general movement of wage rates for the main industrial groups as well as for individual industries, but these cannot be used to

\* For more detailed information see "Wage Rates and Hours of Labour in Canada", published by the Department of Labour as a supplement to the *Labour Gazette*.

compare wage rates in one industry with those in another. The statistics are average straight-time wage rates or average straight-time piece-work earnings and therefore do not include over-time or other premium payments.

Tables 33 and 34 show the index numbers of wage rates by main industrial groups and by industries. From 1930 to 1933 there was a general decrease in wage rates but increases have been general each year since that time. During the period 1939-48, the rise in the index number of wage rates amounted to 95.8.

### 33.—Index Numbers of Wage Rates for certain Main Groups of Industries, 1939-48

(1939=100)

NOTE.—Figures back to 1901 may be obtained from the report "Wage Rates and Hours of Labour in Canada, 1947", published by the Department of Labour as a supplement to the *Labour Gazette*. Figures for 1921-38 are given at p. 650 of the 1947 Year Book.

**Wages of Farm Labour.**—With few exceptions, farm wage-rates in Canada during 1948 continued the upward trend which has been in evidence since 1940, the year in which this wage-rate series was started. Compared with 1940, the current rates of wages paid to male hired help on farms have increased from two and one-half to three and one-half times. Average wage rates are shown on the basis of rates paid with board provided by the employer and without board. The information is provided by a corps of volunteer farm correspondents located throughout Canada.

## 39.—Average Wages of Male Farm Help per Day and per Month, as at Jan. 15, May 15 and Aug. 15, 1945-48

NOTE.—Figures for 1940-42 are given at pp. 732-733 of the 1943-44 Year Book and for 1943-44 at pp. 653-654 of the 1947 edition.

## Section 8.—Workers Affected by Collective Agreements

Statistics on the number of workers affected by collective agreements in Canada are compiled by the Department of Labour. Table 40 gives figures for the principal industrial groups. It shows in the second column the number of workers affected by agreements extended under the Quebec Collective Agreement Act (see Subsection 1, p. 711). Any duplication of the numbers of workers covered by agreements under this Act and by other agreements is eliminated in the third column. Of the total number of workers affected by agreements, 92 p.c. are represented by international or national unions. A more detailed table in the *Labour Gazette*, March, 1949, as well as earlier studies of agreements in certain industries is available from the Department of Labour.

## 40.—Workers Affected by Collective Agreements, by Industries, 1947

## Section 9.—Organized Labour in Canada

Information concerning trade unions is published in the Annual Report on Labour Organization in Canada issued by the Department of Labour.

At the close of 1948 there were 977,594 trade union members in Canada. The membership of the Trades and Labour Congress of Canada, as compiled from reports of unions to the Department of Labour, was 439,029 in 2,779 branches of affiliated and directly chartered unions; that of the Canadian Congress of Labour was 338,627 in 1,187 branches and local unions; that of the Canadian and Catholic Confederation of Labour, 99,370 in 428 branches; the independent railroad brotherhoods, 41,126 in 376 branches; and independent local unions, 4,346 in 39 branches.

In addition to the above figures, it is estimated that Newfoundland, which became a province of Canada on Mar. 31, 1949, has about 35,000 union members. Many of these have become affiliated with the Canadian labour congresses.

*Trades and Labour Congress of Canada.*—The Trades and Labour Congress of Canada is the oldest of the central labour organizations in Canada. After the disbanding of the Canadian Labour Union, which had drawn together local unions

in Ontario from 1873 to 1877, inclusive, there was no central organization until 1883 when the Trades and Labour Council of Toronto called a conference of local unions and plans were made to establish a national organization which was formally set up in 1886.

Affiliated with the Trades and Labour Congress at the present time are "international" trade unions, almost all of which are also affiliated with the American Federation of Labor, a number of Canadian or "national" unions and a number of directly chartered labour unions.

*Canadian Congress of Labour.*—This Congress was organized in September, 1940, when the All-Canadian Congress of Labour, formed in 1927, amended its constitution to permit the affiliation with the Congress of the Canadian branches of those international unions which, in the United States, are affiliated with the Congress of Industrial Organization. The Canadian Congress has also among its members a number of unions to which it has granted charters.

*Canadian and Catholic Confederation of Labour.*—National Catholic Unions in Canada date from 1901. In 1921 these local Catholic Syndicates, which are grouped in federations according to industry as far as possible, formed a central organization, the Canadian and Catholic Confederation of Labour.

## Section 10.—Strikes and Lockouts

Statistics of strikes and lockouts in Canada have been collected by the Federal Department of Labour since its establishment in 1900.

A complete review of strikes and lockouts during 1947 and 1948, with analyses of the statistics under various headings, will be found in supplements to the *Labour Gazette* for April, 1948, and April, 1949.

**Strikes and Lockouts in Recent Years.**—A marked improvement in industrial relations, as compared with the two preceding years, was shown during 1948 by statistics of disputes between workers and employers which resulted in work stoppages. During 1948, the loss of time due to strikes was little more than one-third of the loss in 1947 and about one-fifth of that in 1946, the peak year. The number of strikes and lockouts in 1948 and the number of workers involved were the lowest recorded for any year since 1939.

The demand for higher wages, to offset increases in the cost of living, was the central issue in two-thirds of the strikes during the year, causing about 85 p.c. of the total time loss. In 1947, about 90 p.c. of the time loss resulted from disputes over wage increases. Such demands were often linked with various questions involving unionism, working conditions, vacations with pay, etc. Since 1945, when most of the strike idleness resulted from questions involving unionism, the question of union recognition has not been an issue. There were no sympathetic strikes recorded during 1948. The great variety and complexity of causes leading to strikes present difficulties in classification for statistical purposes as there are usually several points in dispute in each case.

In the manufacturing group of industries, which has the largest working force, time loss resulting from strikes in 1948 was greater than in all other groups combined. In 1947 the greatest time loss was in the mining group. There were two important strikes in the coal-mining industry during 1948 and nine lesser stoppages. In all mining, the time loss was about one-third of the total for the year. Based on the number of wage and salary workers in Canada, the total amount of time lost was about 0.1 p.c. of the estimated working time. In 1947 it was about 0.25 p.c., and in 1946 about 0.5 p.c.

Settlement of 40 p.c. of the strikes in 1948 was brought about by direct negotiations, approximately the same proportion as in the previous year. Negotiations played an important part in settlement of differences in many other cases, following reference to conciliation boards, labour courts, etc. In 1948, about 35 p.c. of the stoppages were settled by conciliation, reference to labour boards, commissioners, and arbitration, about the same percentage as in 1947.

bridges.

<sup>4</sup> Includes water service.

## Section 11.—Canada and the International Labour Organization

The Department of Labour is the officially designated liaison agency between the Canadian Government and the International Labour Organization. The I.L.O. was established in 1919 in association with the League of Nations under the Treaties of Peace with the object of improving labour and social conditions throughout the world by international agreement and legislative action. Under an agreement approved by the General Conference of the International Labour Organization at its 29th Session at Montreal, Que., on Oct. 2, 1946, and by the United Nations General Assembly on Dec. 14, 1946, the Organization became a specialized agency of the United Nations, although retaining its autonomy.

An association of 60 nations, financed by their governments and controlled by representatives of those governments and of their organized employers and workers, the Organization comprises: (1) the General Conference of representatives of the Member States; (2) the International Labour Office; and (3) the Governing Body of the Office. The Organization's structure and field of activity have been considerably extended since 1945 by the establishment of eight tripartite committees to deal with problems of major world industries.

The Conference in normal times meets at least once a year, and is composed of four delegates from each Member State, two representing the government and two representing employers and workers, respectively. Decisions of the Conference are in the form of Conventions or Recommendations. The former, when given legislative effect and ratified by Member States, are legally binding on them. The enforcement of Conventions within such countries is a matter for annual consideration by the Conference. The I.L.O. Constitution requires, however, that every Convention must be brought before the competent authority or authorities for legislative or other action. In Canada, the competent authorities in respect to the subject matter of most of the Conventions and Recommendations are the Provincial Legislatures. Amendments to the Constitution adopted by the Conference in 1946 included new provisions concerning the obligations imposed on federal countries with respect to the manner of dealing with Conventions and Recommendations when ratified by two-thirds of the Member States. These changes in procedure are expected to facilitate the adoption of Conventions and Recommendations by the constituent States or provinces of federal countries.

The International Labour Office acts as the permanent secretariat of the Organization and as an information centre and publishing house with respect to all questions on industry and labour.

The Governing Body consists of 32 persons, 16 government representatives, eight employers' and eight workers' representatives, of whom all but the representatives of the eight States of chief industrial importance, while holding permanent seats, are elected triennially by the Conference. The Governing Body, which usually meets quarterly, has general supervision of the International Labour Office, frames its budget and fixes the agenda of the Conference when the Conference

itself does not do so. Four sessions were held during 1948—in March, June, July and December, the first and fourth at Geneva, Switzerland, and the two others at San Francisco, California.

There have been 32 sessions of the Conference at which 90 draft Conventions and 83 Recommendations have been adopted covering a wide range of subjects: freedom of association; hours of work; weekly rest; holidays; minimum wage for employment; night-work of women and young persons; health and safety; workmen's compensation; seamen's conditions; insurance against unemployment, sickness, old age and death; colonial labour problems; protection of migrant workers; and many other aspects of the protection of workers' rights and interests. There have been 1,012 ratifications of these Conventions.

Eight International Labour Conventions have been given legislative effect by the Federal Parliament and have been ratified by the Government, six relating to seamen, one to dockers and one to statistics.

During 1948 the International Labour Conference held its 31st Session at San Francisco; three of the eight Industrial Committees of the I.L.O. held sessions (Chemicals, Textiles and Petroleum); a Technical Tripartite Conference on Safety Provisions in Factories met to draw up a model code for factories and a preliminary meeting of Technical Experts on Safety in Coal Mines took place. Canada was represented at all these meetings, full accounts of which are to be found in the *Labour Gazette*.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Canada more than 3,000 miles in length from east to west, with the main topographic barriers running in a north-south direction, and a relatively small population of 13,549,000 (1949 estimate) thinly distributed along the southern strip of this vast area, presents unusual difficulties from the standpoint of transportation. Different parts of the country are shut off from each other by Cabot Strait, the Strait of Belle Isle, by areas of rough, rocky forest terrain, such as the region lying between New Brunswick and Quebec, the areas north of Lakes Huron and Superior, dividing the industrial region of Ontario and Quebec from the agricultural areas of the prairies, and the barriers interposed by the mountains of British Columbia. To such a country with a population so dispersed and producing for export, as well as for consumption in distant portions of the country itself, cheap transportation is a necessity of life.

In order to appraise the value of each of the agencies of transportation, this Chapter of the Year Book, after treating of government control over agencies of transportation and communication in Part I, deals with the four main agencies, namely, carriers by rail, road, water and air, in Parts II, III, IV and V, respectively. In each Part the arrangement is intended to show; (1) the plant, equipment and facilities available; (2) the cost to the Canadian people; and (3) the traffic carried or services performed, in so far as statistics are available for each agency.

Scarcely less important than transportation from the social and economic viewpoints, is the development of communications in a country so vast and with population centres so scattered. The Post Office has been a great factor in promoting solidarity among the people and this same objective is being further aided by radio. Telegraphs and telephones have done much to lessen distances and make for closer relationships—the rural telephone being of particular social and economic benefit in country districts. The press, assisted by cheap telegraph and cable rates, and by low second-class mail rates to all parts of the country, has been helpful in developing national sentiment. These means of communication are dealt with in Parts VI, VII, VIII and IX.

## **PART I.—GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION AND COMMUNICATION**

### **Section 1.—Government Control Over Agencies of Transportation\***

Carriers by rail, road, water and air are, or should be, inter-related parts of an integral whole where each agency has its place in the efficient provision of necessary transportation. The Federal Department of Transport was organized on Nov. 2, 1936, under authority of c. 34 of the Statutes of 1936, to unify in one Department the control and supervision of railways, canals, harbours, marine and shipping, civil aviation, radio and meteorology.

The business of transportation and communications is, generally speaking, a 'natural monopoly', i.e., a type of enterprise in which service can be more efficiently and economically rendered to the public where one or a few concerns control a particular type of service throughout the country. For this reason there has been a strong tendency toward consolidation and amalgamation over the past half century. The outstanding example of these consolidations in Canada in recent years is the concentration of control of the railways of the country in the hands of the Canadian Pacific Railway Company and the Canadian National Railways.

Such control may bring with it elements of monopoly and possible overcharge, and it has been deemed advisable in Canada, as in other countries, to set up authorities to control the rates to be charged and other conditions under which services to the public are to be rendered by common carriers. This control, so far as the railways under charter or within the jurisdiction of the Federal Government are concerned, is now in the hands of the Board of Transport Commissioners. From time to time the regulatory authority of the Commission has been extended to a limited extent to other utilities (see under "Air Transport Board", pp. 729-730).

Besides the Board of Transport Commissioners, there exist, in several of the provinces, bodies that undertake among their duties the supervision and control of local public utilities operating under the jurisdiction of the provinces, and the regulation of their rates for service. Among these are the Ontario Department of Municipal Affairs (formerly the Railway and Municipal Board of Ontario, estab-

\* This material has been compiled in co-operation with the Board of Transport Commissioners, the Air Transport Board and the Department of Transport.

lished in 1906), the Quebec Commission of Public Utilities established in 1909, the Nova Scotia Board of Commissioners of Public Utilities and the Public Utilities Commission of Manitoba. In the three most westerly provinces these same duties are performed by provincial Departments of Railways.

**The Board of Transport Commissioners for Canada.**—An explanation of the situation that led to the introduction of railway regulation by commission in Canada, as well as other information relating to the organization of the Board, procedure, judgments, etc., is given at pp. 633-634 of the 1940 Year Book.

*Powers of the Board.*—With regard to transport by rail, these powers cover matters relating to the location, construction and operation of railways. The most important of these has to do with rate regulation. Passenger rates are divided into standard and special; freight rates into standard, special and competitive. Standard rates are maximum rates and the only ones that must be approved by the Board before they are applied. Special and competitive rates, being less than maximum rates, may be applied by railways without the Board's approval, provided that a change of rates has been advertised. Important rate adjustments, however, usually come to the notice of the Commission, for a changed rate alters the extent of the territory in which a shipper can compete and on this account he is likely to appeal the case to the Commission.

By an amendment to the Railway Act, the regulation of telephone, telegraph and express rates was given to the Commission, but with narrower powers than were given to it in dealing with railways. Under the Transport Act, 1938, and proclamations of the Governor General in Council made thereunder, the Board has power to issue licences to ships engaged in the transportation of passengers or goods on the Great Lakes, the Mackenzie River and the Yukon River. The Board is required to perform the functions vested in it under the Transport Act and the Railway Act with the object of co-ordinating and harmonizing the operations of all carriers engaged in transport by railways and ships. The Board may require every applicant for a licence under the Transport Act to establish public convenience and necessity to its satisfaction and take into consideration the financial responsibility of a licensee or applicant. The Board may, in the licence, state the ports between which the ships named therein may carry goods or passengers and the schedule of services to be maintained; every standard tariff and every amendment and supplement thereto requires the approval of the Board before it becomes effective.

In 1948 legislation was enacted giving the Board of Transport Commissioners jurisdiction over interprovincial and international pipe lines.

**The Air Transport Board.**—The Air Transport Board was established in September, 1944, as a result of an amendment to the Aeronautics Act (8 Geo. VI, c. 28). The Board's main function is the economic regulation of commercial air services in Canada, which includes the issue of licences to all such services and the subsequent regulation of the licensees in respect of tariffs and schedules, public liability, and standards of service to the public. The latest regulations respecting commercial air services made by the Air Transport Board, under the Aeronautics

Act, were approved by Order in Council P.C. 972 of Mar. 25, 1947, and became effective on Apr. 9, 1947. These Regulations, which were made pursuant to amendments to the Aeronautics Act of Dec. 15, 1945 (9 and 10 Geo. VI, c. 9), deal with the classifications of air carriers, applications for licences, accounts records and reports, traffic, tolls and tariffs, and other related matters. Detailed regulatory instructions are issued by the Board in the form of directives, which are made consistent with the Regulations. In addition, the Board advises the Minister in the exercise of his duties and powers under the Act in all matters relating to civil aviation.

The Board takes an active part in the proceedings of the International Civil Aviation Organization, a member of its staff being the Canadian Council Member.

The Board consists of three members, including the chairman, and the staff comprises a Secretary's Branch, which includes the Administration and Licensing Divisions, a Legal Adviser, who is the Chief Legal Adviser to the Canadian Government on all matters of domestic and international air law, an Examiner, who conducts public hearings by order of the Board, a Traffic Branch, and a Research Aeronautical Engineering Branch.

Financial and operating statistics are collected under the authority of the Board's Regulations by the Bureau of Transportation Economics which was established in 1947 under the administration of the Board of Transport Commissioners and serves that Board as well as the Air Transport Board.

Up to Dec. 31, 1948, the Board had issued 31 licences for domestic scheduled commercial air services, 9 licences for Canadian international air services, 166 licences for domestic non-scheduled air services, and 28 licences to domestic commercial air carriers not involved in transport of passengers and goods. In addition, 12 licences had been issued to foreign scheduled air carriers, and 169 licences to foreign non-scheduled air carriers. The following is a statement of the traffic revenue miles flown during the year 1948:—

<i>Service</i>	<i>Total Route Miles</i>	<i>Passenger Miles</i>	<i>Ton Miles</i>	<i>Mail Ton Miles</i>

Domestic non-scheduled air services....	..	12,407,426	1,325,117	—

## Section 2.—Government Control Over Agencies of Communication\*

The development and control of radio-communication in Canada from the beginning of the century is outlined at pp. 644-646 of the 1945 Year Book.

The present phase of national radio broadcasting in Canada was entered upon in 1936, when, with the passage of the Canadian Broadcasting Act, 1936, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission (see p. 817). The new Act gave the Corporation much wider powers in the operation of the system, and was modelled very largely along the lines of the Act governing the British Broadcasting Corporation. The technical control of all

\* Revised under direction of the Deputy Minister, Department of Transport.

broadcasting stations reverted to the Minister of Transport, who was also empowered to make regulations for the control of any equipment liable to cause interference with radio reception.

Under the Radio Act, 1938, radio stations including broadcasting stations may be established only under, and in accordance with, licences granted by the Minister of Transport, and, with the exception of those matters covered by the Canadian Broadcasting Act, 1936, radio-communications are regulated under the Radio Act, 1938, and Regulations. Licences for radio stations may be issued only to British subjects or to companies or corporations created or incorporated under the laws of Canada or any of the provinces thereof or any country of the Commonwealth.

In addition to the requirements of these Acts and Regulations, all radio-communication matters are administered in accordance with the provisions of the International Telecommunication Convention and Radio Regulations annexed thereto, as well as such Regional Agreements as the Inter-American Telecommunications Convention and Inter-American Agreement, and the North American Regional Broadcasting Agreement.

By Order in Council P.C. 2526, dated June 8, 1948, responsibility for telegraph and telephone services formerly operated by the Federal Department of Public Works was transferred to the Minister of Transport. The general object of these services is to furnish wire communications for outlying and sparsely settled districts where commercial companies do not enter into the field and where the population must receive adequate communication services in the public interest.

Landline telegraph and telephone tariffs and tolls, charged by companies incorporated by the Federal Government, are regulated by the Board of Transport Commissioners under the provisions of the Railway Act.

Tariffs and tolls charged to the public by individuals or companies, for radio telephone or telegraph communications within Canada, are likewise regulated by the Board of Transport Commissioners, under the provisions of the Railway Act, and the Regulations made under the Radio Act, 1938.

## PART II.—RAILWAYS\*

The treatment of rail transportation is divided into three Sections dealing respectively, with steam railways, electric railways and express companies.

### Section 1.—Steam Railways

The steam railway is the most important transportation agency from the standpoint of investment and of traffic handled and the statistical field is more completely covered for this form of transportation than for any other.

\* Revised in the Transportation Division, Dominion Bureau of Statistics. More detailed information is given in the annual reports of the Division. Certain of the financial statistics are compiled in co-operation with the Department of Transport.

**Historical.**—A brief historical sketch of the development of steam railways in Canada is given at pp. 635-638 of the 1940 Year Book. Other details are given at pp. 616-623 of the 1922-23 Year Book, at pp. 601-603 of the 1926 Year Book and at pp. 694-698 of the 1934-35 Year Book. An article at pp. 648-651 of the 1945 edition deals with the wartime role of the steam railways of Canada.

### Subsection 1.—Mileage and Equipment

Although construction was begun in 1835 on the first railway in Canada—the short link of 16 miles between Laprairie and St. Johns, Que.—there were only 66 miles of railway in operation by 1850. The first great period of construction was in the 1850's when the Grand Trunk and Great Western Railways, as well as numerous smaller lines, were built. The building of the Intercolonial and the Canadian Pacific Railways contributed to another period of rapid expansion in the 1870's and 1880's. In the last period of extensive railway building from 1900 to 1917, the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed.

During the past decade, there has been a tendency for railway mileages to decline slightly because of the abandonment of unprofitable lines. Of the 42,248 miles of single track operated in 1948, 21,467 were Canadian National lines.

#### 1.—Record of Steam-Railway Mileage, 1900-48

NOTE.—Corresponding figures of total mileage of single track for the years 1835 to 1899 are given at p. 546 of the 1941 Year Book.

Total Mileage (Single Track)						Mileage, by Provinces

<sup>1</sup> Includes Pullman Company cars in Canadian service.<sup>2</sup> Includes 3 auto-railers.

## Subsection 2.—Finances

The tables in this Subsection deal with capital liability, capital investment, earnings, operating expenses, employees and their earnings, and Government aid to steam railways. However, the presentation of the financial statistics of railways in Canada would not be complete without some detailed consideration of the finances of the Government-owned railways. This is given in the latter part of the Subsection. Further statistics of revenue are included in Table 9, where they are shown in relation to traffic. Statistics of individual railways, covering single-track mileage, capital, earnings and operating expenses, may be found in the annual report "Statistics of Steam Railways of Canada", published by the Dominion Bureau of Statistics.

**Capital Liability.**—The great increase after 1922 in the capital liability of the steam railways of Canada is due to the inclusion of all Government loans to railways and investment in road and equipment of Government railways as part of the capital liability of the railways. The reduction after 1937, brought about by the Canadian National Capital Revision Act (c. 22, 1937), is explained at p. 644 of the 1939 Year Book.

### 3.—Capital Liability<sup>1</sup> of Steam Railways, 1929-48

NOTE.—Figures for the years 1876 to 1925, inclusive, are given at p. 649 of the 1927-28 Year Book and those for 1926-28 at p. 662 of the 1947 edition.

<sup>1</sup> Does not include Canadian railway capital owned by Canadian railways.

**Capital Investment.**—The decrease in capital liability during 1948 of \$58,278,387 from 1947 as shown in Table 3 compares with an increase in investments in road and equipment of \$188,038,856 as shown in Table 4 and reflects improvements made during the year. The investment account in recent years has been affected by write-offs for lines abandoned, transfers of property to other Government Departments, etc., as well as by higher gains in earnings during the war years.

<sup>1</sup> Details of this item are given in the annual report "Statistics of Steam Railways of Canada" issued by the Transportation Division of the Dominion Bureau of Statistics.

**Earnings and Expenses.**—The operating ratio, or ratio of expenses to revenues, of Canadian railways increased from around 70 p.c. to over 90 p.c. between 1917 and 1920, and remained high thereafter. The United States Government took over the operation of the United States railways and increased the rates of pay of the railway employees when that country entered the First World War. The Canadian railways were also obliged to make corresponding increases and these have been the chief factor in increased operating ratio. Declining revenues without corresponding

reductions in expenses during the depression period also maintained the high ratio. The period from 1938 to 1943 showed a sharp decline in this ratio, due primarily to the greatly increased freight traffic occasioned by the Second World War and a subsequent acceleration in gross earnings. A steadily rising trend has been in evidence since 1943 caused by higher costs for materials and labour.

### 5.—Earnings and Operating Expenses of Steam Railways, 1939-48

NOTE.—Gross earnings and operating expenses for the years 1875 to 1914 are given at p. 434 of the 1916-17 Year Book; those for 1915-25 at p. 550 of the 1941 Year Book; and for 1926-38 at p. 585 of the 1942 Year Book.

**Employment and Salaries and Wages.**—The number of employees registered an increase in 1948 over 1939 of almost 47 p.c. while salaries and wages increased by about 156 p.c. The latter rise was due to an increase in time worked per employee as well as to increased rates of pay. Maintenance of equipment employees, on hourly rates, worked about 9 p.c. more hours and were paid nearly 67 p.c. more wages per employee and transportation employees worked an average of slightly more than 4 p.c. more hours for an increase in pay of about 63 p.c.

## 7.—Steam Railway Employment and Salaries and Wages, 1939-48

NOTE.—Figures for the years 1912-38 are given at p. 551 of the 1941 Year Book.

Year	Employees <sup>1</sup>	Total Salaries and Wages <sup>1</sup>	Average Salaries and Wages	Ratio of Operating Salaries and Wages to—

1948.....	189,963	512,054,795	2,696	58.5	63.4

<sup>1</sup> Figures include employees or wages for "outside operations" amounting to from 3 p.c. to 6 p.c. of total employees and 2 p.c. to 5 p.c. of total salaries and wages. <sup>2</sup> Includes approximately \$10,000,000 in wages earned in 1943.

**Government Aid to Railways.**—In order that the private railways of Canada might be constructed in advance of settlement, as colonization roads, or through thinly settled districts where little traffic was available, it was necessary for federal and provincial governments and even for municipalities to extend some form of assistance. The form of aid was generally a bonus of a fixed amount per mile of railway constructed and, in the early days, grants of land other than for right-of-way were also made.

As the country developed, the objections to the land-grant method became more apparent, and aid was more frequently given in the form of a cash subsidy per mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that system, except those for

rolling-stock, have been guaranteed by the Federal Government. No new land grants or cash subsidies have been advanced by either the Federal or Provincial Governments since 1939 and the situation, as it existed at Dec. 31, 1940, is set out at pp. 587-588 of the 1942 Year Book.

During the era of railway expansion before the First World War, provincial governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railway System. As these bonds mature or are called they are paid off by the Canadian National Railways in large measure through funds raised by the issue of new bonds with Federal Government guarantee. In this manner, bonds guaranteed by the Governments of Ontario, Manitoba, Saskatchewan, Alberta and New Brunswick have been eliminated in recent years.

### 8.—Railway Bonds Guaranteed by Federal and Provincial Governments, as at Dec. 31, 1948

Government	Canadian National	Other Railways	Total

<b>Totals.....</b>	<b>485,452,332</b>	<b>465,000</b>	<b>485,917,332<sup>1</sup></b>

<sup>1</sup> Does not include \$6,985,175 perpetual debenture stock and guaranteed stock of the former Grand Trunk Railway, now part of the Canadian National Railway System, on which interest and dividends are guaranteed by the Federal Government.

### Subsection 3.—Traffic

**Passenger and Freight Traffic.**—Table 9 shows the passenger and freight statistics for all steam railways for the years 1939-48. A separate analysis is given at p. 744 of the operations and traffic of the Canadian National Railways. Since this System is controlled by the Federal Government, the information is considered of special interest.

### 9.—Statistics of Passenger and Freight Services and Revenue Receipts, 1939-48

NOTE.—Figures from 1910-38 are given in the corresponding tables of previous Year Books.

<sup>1</sup> Includes express, baggage, mail and other cars.  
caboose miles and excludes miles made in passenger and non-revenue trains.

<sup>2</sup> Duplications included.

<sup>3</sup> Includes

<sup>4</sup> Duplications eliminated; see Table 10 for details of freight carried.

**Commodities Hauled.**—Revenue freight carried by the railways in 1948 showed an increase of 1.4 p.c. over 1947. The peak volume was reached in 1944. The average haul was reduced from 393 miles in 1947 to 381 miles in 1948 and ton-miles decreased accordingly. The principal commodities showing increases over 1947 were live stock, anthracite coal, bituminous coal, coke, ores and concentrates, sand and gravel, base metals, and other mine products. Pulpwood also moved in heavier volume while most items in the manufactured and miscellaneous group registered improvement. The intransit movement of war supplies, motor-vehicles

and gasoline and petroleum products during the war years between United States points over Canadian lines had been particularly heavy and with wheat was responsible for the 1944 record.

### 10.—Commodities Hauled as Freight on Steam Railways, 1944-48

NOTE.—In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National Railways, but the link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways.

1948.....	15	351	99	9,980	271	825	385	11,156

<sup>1</sup> Includes trespassers walking along tracks, stealing rides, etc., and persons crossing tracks at level crossings.

These accidents include all those in which railway trains were involved and accidents on railway property. The classification of accidents used in the Dominion Bureau of Statistics vital statistics treats collisions between motor-vehicles and trains as motor-vehicle accidents; provincial statistics also class them as motor-vehicle accidents and, consequently, adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor-vehicle.

## Subsection 4.—The Canadian National Railway System

A description of the origin and growth of Government-owned railways in Canada is given at pp. 601-603 of the 1926 Year Book. That article describes their consolidation under the Canadian National Railways in 1923. The Hudson Bay Railway is a direct liability of the Federal Government and has been operated by the Canadian National Railways for the Government since Apr. 1, 1935, but is not included in the data for Canadian National Railways; to Mar. 31, 1948, the total capital expenditure on this account was \$33,263,260, exclusive of the expenditure of \$6,240,096 on the terminal at Port Nelson, Man., and a loss of \$4,383,427 on operation. The operating deficit for the fiscal year 1947-48 was \$266,364.

The major portion of Federal Government investments in railways consists of construction costs of the Intercolonial System, the National Transcontinental Railway and the Hudson Bay Railway, and the purchase price of small railways in the Eastern Provinces. The terminals at Churchill, Man., consisting of a grain elevator, a warehouse and docks have been transferred to the National Harbours Board and the investment removed from the railway account. Loans and advances to the Canadian National Railways for payment of operating deficits were charged to the Consolidated Revenue Account of Canada and also cleared from the railway account. Other adjustments were made under the Canadian National Railways Capital Revision Act, 1937.

In view of the interest in the publicly-owned railway system, certain salient statistics are presented showing the assets, debt, operating accounts, mileage and traffic for the system. More detail is available from the report "Canadian National Railways, 1923-48" published by the Dominion Bureau of Statistics.

## 13. — Assets of the Canadian National Railway System, as at Dec. 31, 1922 and 1948

Account	Dec. 31, 1922	Dec. 31, 1948	Increase (+) or Decrease (—)

### 13.—Assets of the Canadian National Railway System, as at Dec. 31, 1922 and 1948 —concluded

Account	Dec. 31, 1922	Dec. 31, 1948	Increase (+) or Decrease (—)
	\$	\$	\$
<b>Deferred Assets—</b>			
Working fund advances.....	166,847	423,745	+256,898
Insurance and other funds.....	352,488	13,486,000	+13,133,512
Pension contract fund.....	—	45,120,000	+45,120,000
Other deferred assets.....	11,805,962	2,371,909	—9,434,053
<b>Totals, Deferred Assets.....</b>	<b>12,325,297</b>	<b>61,401,554</b>	<b>+49,076,357</b>
<b>Unadjusted Debits—</b>			
Rents and insurance premiums paid in advance.....	322,059	74,077	—247,982
Discount on capital stock.....	634,960	—	—634,960
Discount on funded debt.....	1,919,635	4,209,025	+2,289,390
Other unadjusted debits.....	12,820,903	4,086,559	—8,734,344
<b>Totals, Unadjusted Debits.....</b>	<b>15,697,557</b>	<b>8,369,661</b>	<b>—7,327,896</b>
<b>Grand Totals.....</b>	<b>1,958,031,203</b>	<b>2,447,129,241</b>	<b>+489,098,038</b>

<sup>1</sup> Includes demand loans and deposits. <sup>2</sup> Includes 1948 deficit of \$33,532,741 receivable from Federal Government. <sup>3</sup> Increase in current liabilities \$44,449,381.

**Capital Structure and Debt.**—The share capital on Dec. 31, 1922, consisted of \$165,627,739 stock of the Grand Trunk Railway held by the Federal Government and \$100,000,600 of the Canadian Northern Railway stock also held by the Federal Government. There was also outstanding \$4,591,975 stock of constituent lines held by the public. Table 14 shows the capital liabilities of the Canadian National Railways other than shareholders' capital. The amounts shown under "Active Assets" represent, largely, temporary loans and explain the large increases during the war years.

### 14.—Debt of the Canadian National Railway System, as at Dec. 31, 1939-48

NOTE.—Figures for the years 1922-37 are given at p. 591 of the 1942 Year Book.

At Dec. 31—	Funded Debt Held by Public			Government Loans and Advances—	Appropriations for Canadian Government Railways <sup>1</sup>	Grand Totals <sup>2</sup>
	Guaranteed by—		Un- guaranteed			
	Federal Government	Provincial Governments				
	\$	\$	\$	\$	\$	\$

1944.....	576,585,327	2,702,155	50,166,424	645,103,872	16,771,981	2,050,695,085
1945.....	525,688,314	2,586,932	44,904,751	674,201,613	16,771,981	2,046,123,159
1946.....	486,820,210	1,952,108	41,650,680	701,765,305	16,771,981	2,029,614,299
1947.....	536,807,069	1,952,108	44,100,585	672,698,368	16,771,981	2,051,096,952
1948.....	490,485,399	1,952,108	91,795,151	743,722,844	16,771,981	2,123,537,672

<sup>1</sup> Working capital, the remainder of the account being eliminated (see p. 591 of the 1942 Year Book).  
<sup>2</sup> Includes Federal Government Proprietors Equity and capital stock held by the public; for detail see "Canadian National Railways", Dominion Bureau of Statistics Report.

**Operating Finances.**—Gross revenues, operating expenses and net revenues include only those from steam railway and commercial telegraph operations, but the deficits are for the entire System, including the operating results of the Niagara, St. Catharines and Toronto Railway (electric) and other railways operated separately, hotels, commercial telegraphs, coastal steamships and all other outside operations.

Under the Canadian National Railways Capital Revision Act (c. 22, 1937), interest on Federal Government loans, amounting to \$530,832,598, and Government claims for interest, amounting to \$43,949,039, were cancelled as liabilities of the Railway and these have been eliminated from Table 15 as fixed charges. Loans of \$270,037,438 for capital and \$373,823,120 for deficits were cancelled.

#### 15.—Gross Revenues, Operating Expenses, Net Revenues, Fixed Charges and Deficits of the Canadian National Railway System,<sup>1</sup> 1939-48

NOTE.—Appropriations, etc., for the Hudson Bay Railway are not included with these data; although the Railway was returned to the Government while under construction, it is not now a part of the Canadian National Railways. Figures for 1911-25 are given at p. 660 of the 1936 Year Book and for 1926-38, at p. 590 of the 1942 edition.

Year	Gross Operating Revenues	Operating Expenses	Income Available for Fixed Charges	Total Fixed Charges	Net Income Deficit <sup>2</sup>	Cash Deficit

*Mileage and Traffic.*—At Dec. 31, 1948, steam-railway track mileage of the Canadian National Railways (including lines in the United States but exclusive of the Northern Alberta Railways and Toronto Terminals Railway, which are controlled jointly by the Canadian National and the Canadian Pacific Railways) was 23,404. Including the Thousand Islands Railway, 4.51 miles, and the Muskegon Railway and Navigation Co., 5.25 miles, controlled but operated separately, the total steam mileage was 23,413.8. The grand total, including 115.4 miles of electric lines, was 23,529.2 miles.

<sup>1</sup> Excludes electric lines.<sup>2</sup> Work service excluded.

## Section 2.—Electric Railways\*

Replacing the horse-car systems, used in Montreal and Toronto as early as 1861, electric street railways were first seen in operation in Canada in 1885, when a successful experimental railway was constructed and operated at the Toronto Exhibition Grounds. Before many years their safety and convenience resulted in the discarding of the older systems. The first electric railway line in Canada, and probably the first in North America, ran between Windsor and Walkerville and was established early in June, 1886 (it is recorded that it was in active operation before June 11).

The cheap and reasonably rapid conveyance of human beings is a necessity of modern urban life. In the cities of Eastern Canada, electric street railways are generally operated by private companies under city franchises, while in a considerable number of cities in Ontario and the West the electric railways are owned and operated by the municipalities.

Statistics presented cover the urban and interurban operations of the electric railway systems.

**Equipment.**—The single overhead-trolley system is used by all electric railways but Montreal, Toronto, Winnipeg, Vancouver and several other municipalities have begun to use trackless trolley-buses (518 of these buses being in service in 1948). Of the 30 systems, 19 operated both electric cars and motor-buses in 1948, the buses numbering 1,981. The main advantage of the bus is that it is not confined to a fixed route and, in the case of both motor-buses and trolley-buses, the expense of track maintenance is eliminated.

**Finances.**—When electric railways have ceased to operate because of either a decline in traffic or the substitution of motor-buses, their statistics have been excluded from Table 19. Consequently, fluctuations in revenues, etc., have been affected by variations in traffic and also by changes in the mode of local transportation. Despite these changing conditions, the gross revenues of electric railways

\* For further details see "Electric Railways of Canada, 1948" published by the Dominion Bureau of Statistics.

continued to increase since the low point reached in 1933, and very marked increases were shown from 1940 to 1945. The ratio of expenses to receipts rose from a low of less than 63 p.c. in 1942 to almost 99 p.c. in 1948.

### 19.—Financial Statistics of Electric Railways, 1939-48

NOTE.—Figures for 1901-38 are given in the corresponding table of previous Year Books beginning with the 1926 edition.

Year	Capital Liability			Investment in Road and Equip- ment	Gross Earnings	Operating Expenses	Ratio of Ex- penses to Re- ceipts	Em- ployees	Salaries and Wages

<sup>1</sup> Mainly reduction, \$1,602,500 stock Hamilton Street Railway.

**Traffic.**—The passenger mileage travelled by electric cars in 1948 amounted to 110,797,890, by trackless trolley-buses 12,335,969 and by motor-buses 59,809,850. The number of passengers carried by electric railways in the years since 1939 showed an especially sharp rise over previous years due to improved conditions, and the curtailment of passenger automobile traffic during the War. The 1,344,916,773 passengers carried in 1946 was by far the greatest traffic ever handled by these systems; the number was slightly lower in 1947 and in 1948.

### 20.—Statistics of Electric Railway Operations, 1939-48

NOTE.—Figures for 1901-38 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

## Section 3.—Express Companies

Express service is an expedited freight service on passenger trains, but express companies do not own the means of performing their services; they use railway facilities by virtue of contracts with the railway companies. Express companies in Canada have had close relations with the railways practically from the beginning.

Goods are sent by express for quick transit, so that express rates do not generally compete with freight rates. Thus, in its first tariff the Dominion Express Company, in pursuance of its contract with the Canadian Pacific Railway, gave a rate of  $2\frac{1}{2}$  times the maximum first-class railway freight rate for the same goods carried the same distance. The majority of the contracts between express and railway companies for carrying express freight are on the basis of a percentage of the gross express revenue. The rates paid by the shipper are subject to the approval of the Board of Transport Commissioners. Express companies are all organized under powers conferred by Acts of the Federal Parliament and their business consists in the expeditious shipment of valuable live stock, and such perishable commodities as fresh fish, fruit, etc., the forwarding of parcels, and the issue of money orders, travellers cheques, letters of credit and other forms of financial paper.

**Express Company Operations.**—Four express organizations operate in Canada—three Canadian and one American. The Canadian Pacific Express Company, formerly the Dominion Express Company, is a subsidiary of the Canadian Pacific Railway and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Canadian National and Northern Alberta Railways is handled by departments of the respective railways. The Railway Express Agency, Incorporated, operates over the Canadian sections of United States railways and over the route from Skagway to points in Yukon. No statistics are available regarding the volume of traffic carried by express. Much of the traffic consists of parcels and small lots that would make statistical classification and measurement very difficult. However, there is also an important movement in car lots of live stock, fresh fish, fruit, vegetables and other perishable commodities.

**22.—Mileages Operated, Revenues and Expenses of Express Companies, 1939-48**

NOTE.—Figures for 1911-38 are given in the corresponding table of previous Year Books beginning with the 1927-28 edition.

### PART III.—ROAD TRANSPORTATION\*

Since the recent development of highways in Canada has been almost exclusively for the purpose of providing roadbed for motor-vehicle traffic, highways and motor-vehicles are treated as related features of transportation. After an introductory section, which summarizes briefly provincial regulations regarding motor-vehicles and motor traffic, the whole subject of road transportation is dealt with under the headings of roads and highways and motor-vehicles.

#### Section 1.—Provincial Motor-Vehicle and Traffic Regulations†

NOTE.—In this Section, it is obviously impossible to include the great mass of detailed regulations in force in each province. The purpose in view is to provide only the more important general information. The sources of information for detailed regulations for specific provinces are given at pp. 750-753.

**General.**—The licensing of motor-vehicles and the regulation of motor-vehicle traffic lies within the legislative jurisdiction of the Provincial Governments. Regulations that are common to all the provinces are summarized here:—

*Operator's Licences.*—The operator of a motor-vehicle must be over a specified age (usually 16 years) and must carry a licence, obtainable in most provinces only after prescribed qualification tests and renewable annually. Special licences are required for chauffeurs and, in some cases, for those granted licences who have not reached the specified age.

*Motor-Vehicle Regulations.*—In general, all motor-vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only for the back, in the case of trailers). A change of ownership of the vehicle must be recorded with the registration authority. However, exception from registration is granted for a specified period (usually at least 90 days) in any year to visiting private vehicles registered in another province or a State that grants reciprocal treatment. Further regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes, and provide that equipment include non-glare headlights, a proper rear light, a satisfactory locking device, a muffler, a windshield wiper, and a rear-vision mirror.

*Traffic Regulations.*—In all provinces, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. Speed limits, usually of 50 miles per hour, are in effect; slower speeds are always required in cities, towns and villages, in passing schools and public playgrounds, at road intersections, railway crossings, or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. Motor-vehicles must not pass a street car that has stopped to take on or discharge passengers except where safety zones are provided. Accidents resulting in personal injury or property damage must be reported to a provincial or municipal police officer and any driver involved must not leave the scene of accident until he has rendered all possible aid and disclosed his name to the injured party.

\* Except as otherwise indicated, the material in this Part has been revised in the Transportation Division, Dominion Bureau of Statistics.

† The information in this Section has been revised from material provided by the officials in charge of the administration of motor-vehicle and traffic Acts and Regulations in the individual provinces.

*Penalties.*—Penalties ascend in scale from small fines for minor infractions of any of the regulations to a suspension of the operator's driving permit, impounding of the car, or imprisonment for serious infractions, recklessness, driving without an operator's licence, and especially for attempting to operate a motor-vehicle while intoxicated.

There is such a wide variation in the different provinces regarding the basis of licences and fees, the regulation of public commercial vehicles, details of traffic rules, speed, and the use of motor-vehicles, that it is impossible even to outline them satisfactorily in the space available here.

*Safety Responsibility Legislation.*—All the provinces of Canada, with the exception of Newfoundland, have enacted legislation under this heading which is sometimes referred to as Safety Responsibility Legislation, and at other times as Financial Responsibility Legislation. The following paragraphs give the latest amendments to this Legislation and the authorities responsible for the administration of motor-vehicles.

**Newfoundland.**—*Administration.*—Motor Vehicle Division, Department of Public Works, St. John's. *Legislation.*—The Highway Traffic Act, 1941, and amendments.

**Prince Edward Island.**—Provision was made in the Highway Traffic Act, 1936, for cancellation of the licence of any person unable to satisfy judgment against him arising out of a motor-vehicle accident. The licence is to be reissued only when proof of financial responsibility is made to the Provincial Secretary. In 1946, "Unsatisfied Judgment Fund" legislation was passed whereby the injured party in an automobile accident might receive compensation from this Fund where the person at fault was unable to satisfy the judgment against him. In 1949 a Safety Responsibility Amendment was passed similar to that in force in Manitoba (see pp. 751-752).

*Administration.*—The Provincial Secretary, Charlottetown. *Legislation.*—The Highway Traffic Act (1936, c. 2) and amendments.

**Nova Scotia.**—*Administration.*—Motor Vehicle Branch, Department of Highways and Public Works, Halifax. *Legislation.*—The Motor Vehicle Act (c. 6, 1932) and amendments, and the Motor Carrier Act (R.S.N.S. 1923, c. 78) as amended.

**New Brunswick.**—*Administration.*—Motor Vehicle Division, Department of Public Works, Fredericton. *Legislation.*—The Motor Vehicle Act (1934, c. 20) and amendments.

**Quebec.**—In 1949 the Quebec Government passed an amendment to the Motor Vehicle Act, which provides for the suspension of the driver's licence and registration certificate, for at least three months, of any person proved guilty of driving while under the influence of liquor or narcotics, driving in a dangerous manner or neglecting to stop after an accident or give aid to persons injured in such accident. No licence to drive will be granted for twelve months to a person involved in an accident while driving without a licence. In case of a suit for damages resulting from fault, carelessness or neglect, the driver's licence and registration certificate, or either, may be suspended until judgment has been satisfied. In such case, recovery of licence or certificate may require the furnishing of a guarantee, in the form of insurance, deposit or otherwise, of sufficient financial responsibility to afford reasonable protection to the public against any future accident.

*Administration.*—Motor Vehicle Bureau, Provincial Revenue Offices, Treasury Department, Quebec. *Legislation.*—The Motor Vehicle Act (R.S.Q. 1941, c. 142) and amendments.

**Ontario.**—Safety Responsibility Legislation, or Financial Responsibility Legislation as it is sometimes referred to, came into force in Ontario in September, 1930.

At the 1947 session of the Ontario Legislature, the Highway Traffic Act was amended so as to provide for the automatic suspension of the driver's licence and motor-vehicle permit of: (1) every person convicted of any offence under the Act if any personal injury or property damage occurs in connection therewith; (2) every person convicted of any offence under the Act if the penalty imposed includes suspension of driver's licence or owner's permit; (3) every person convicted of a criminal offence involving the use of a motor-vehicle.

The suspensions remain effective until proof of financial responsibility is filed. The object of this law is to encourage safe driving by imposing this additional penalty on persons convicted of offences arising out of motor-vehicle accidents. Provision is also made for the forfeiture to the Crown of a motor-vehicle operated while the permit for its operation is under suspension. These amendments became effective July 1, 1947.

The Act was also amended to require the payment of all judgments arising out of motor-vehicle accidents either for personal injuries or property damage up to a maximum of \$5,000 for one person or \$10,000 for two persons and \$1,000 for property damage arising out of one accident. If judgments are not satisfied by the judgment debtors, provision is made for their payment out of an Unsatisfied Judgment Fund. The judgment debtor is then prohibited from holding a driver's licence or having a motor-vehicle registered in his name until the judgment debtor repays in full to the Fund the amount paid out, together with interest at 4 p.c. from the date of such payment, and also files proof of ability to satisfy a judgment for \$11,000 which may arise out of any future accidents. This part of the Act applies only to judgments arising out of accidents in Ontario since July 1, 1947.

*Administration.*—Motor Vehicles Branch, Department of Highways, Toronto. *Legislation.*—The Highway Traffic Act (R.S.O. 1937, c. 288) and amendments, the Public Vehicle Act (R.S.O. 1937, c. 289) and the Commercial Vehicle Act (R.S.O. 1937, c. 290).

**Manitoba.**—In 1945, the Financial Responsibility Law of Manitoba was repealed and replaced with new Safety Responsibility Legislation.

Features under this Legislation include the immediate and automatic impounding of any motor-vehicle after an accident if the operator is unable to produce proof of financial responsibility at the time. Impoundment continues until the owner or driver settles any claims for damages or bodily injury sustained, or deposits with the Provincial Treasurer security sufficient to cover any judgment which may be recovered and until the owner of the vehicle has filed proof of financial responsibility for the future.

Driving privileges of financially irresponsible motorists are indefinitely suspended pending settlement of damage claims or deposit of security and the filing of proof of financial responsibility.

A trust fund called the Unsatisfied Judgment Fund provides for payment of judgments for bodily injuries and deaths in cases where the judgment debtor does not pay. This Fund also provides for the victims of hit-and-run motorists.

*Administration.*—Provincial Treasurer, Winnipeg. *Legislation.*—The Highway Traffic Act (R.S.M. 1940, c. 93) and amendments.

**Saskatchewan.**—Financial Responsibility Legislation in this Province was placed on the Statutes in 1933 and provides that, where a judgment is rendered in any court in Canada for damages on account of death or injury to any person or on account of damage to property in excess of \$50 occasioned by a motor-vehicle and the person fails to satisfy the judgment within 30 days from the date upon which it becomes final, the Board shall suspend the operator's or chauffeur's licence issued to the person against whom the judgment is rendered and the registration of every motor-vehicle registered in his name. Judgment must be satisfied before licences are reinstated and the person so liable must give proof of financial responsibility for future motor-vehicle accidents in the amount of \$11,000 for a period of three years.

The Automobile Accident Insurance Act was passed by the Legislature and placed on the Statutes during 1946 and provides collision insurance, personal injury insurance, and public liability and property damage insurance in the amounts as set forth in the said Act. Saskatchewan citizens are provided with insurance against death or personal injury resulting directly from motor-vehicle accidents. Every person is automatically provided with public liability and property damage insurance to the extent of the amount paid for personal injuries or property damage which is payable by the insurance office.

*Administration.*—Treasury Department, Taxation Branch, Highway Traffic Board, Revenue Building, Regina. *Legislation.*—The Vehicles Act (R.S.S. 1945, c. 98).

**Alberta.**—In 1947 the Alberta Legislature passed the Automobile Accident Indemnity Act (later the title was amended to the Motor Vehicle Accident Indemnity Act), the main provisions of which are: the suspension of the licences of all drivers directly or indirectly involved in an accident which results in bodily injury, or in damage to property exceeding \$25 in value, (changed to \$75 in 1949), if proof of financial responsibility on the part of the driver is not forthcoming and; an Unsatisfied Judgment Fund is set up on the basis of a fee of \$1 per year, collected for each licensed motor-vehicle, in addition to the regular registration fee. Action may be taken against the Superintendent of the Fund where a judgment for an amount exceeding \$100 has been obtained following a motor-vehicle accident, if the assets of the judgment debtor are insufficient to meet the award of the court, or in cases where the driver or owner of the motor-vehicle causing the accident is unknown. Minor amendments were made to this legislation in 1948 and 1949.

*Administration.*—Motor Vehicle Branch, Department of the Provincial Secretary, Edmonton, and Alberta Highway Traffic Board, Edmonton. *Legislation.*—The Vehicles and Highway Traffic Act (R.S.A. 1942, c. 275) and amendments, the Public Service Vehicles Act (R.S.A. 1942, c. 276), and Rules and Regulations. The Vehicles and Highway Traffic Act is administered by the Department of the Provincial Secretary, and the Public Service Vehicles Act by the Alberta Highway Traffic Board, Department of Public Works.

**British Columbia.**—Financial Responsibility Legislation, which has been in effect in this Province since 1932, provides for the suspension of driver and motor-vehicle licences on failure to pay judgments, for contravention of certain convictions in connection with speed and for offences under Section 285 of the Criminal Code, etc. These suspensions remain in effect until the party concerned files proof of financial responsibility, which he is required to keep in full force and effect. In 1947, new legislation was enacted that added to the Financial Responsibility Legislation already in effect, providing for the impounding of motor-vehicles that were involved in motor-vehicle accidents, and for which, at such time, a motor-vehicle liability insurance card or a financial responsibility card could not be produced.

*Administration.*—Enforcement of the Motor Vehicle Act, the Highway Act and the Motor Carrier Act is vested in the Commissioner of Provincial Police, Victoria, while the Highway Act is administered by the Minister of Public Works, the Motor Carrier Act by the Public Utilities Commission, and the Motor Vehicle Act by the Superintendent of Motor Vehicles.

**Yukon.** — *Administration.* — Commissioner of Yukon Territory, Dawson, Yukon. Information regarding regulations may also be obtained from the Lands and Development Services Branch, Department of Mines and Resources, Ottawa. *Legislation.*—The Motor Vehicle Ordinance, No. 2, 1947, and amendments.

**Northwest Territories.**—*Administration.*—Director, Lands and Development Services Branch, Department of Mines and Resources, Ottawa. *Legislation.*—The Motor Vehicle Ordinance, assented to Mar. 26, 1941, and amendments.

## Section 2.—Roads and Vehicles

### Subsection 1.—Roads and Highways

The steadily increasing use of motor-vehicles for pleasure and commercial travel has created an insistent demand for good highways and for the development of scenic routes as tourist attractions. Also the widespread ownership of automobiles and trucks in rural areas—according to the 1941 Census there was one motor-vehicle for every 1.8 farms—has brought about a great improvement in secondary rural roads.

The figures of Table 1 include the mileages of all roads under provincial jurisdiction, those in the National Parks, local roads in the Maritime Provinces and Ontario and estimates of local roads in the four western provinces. There are great stretches of country in the northern portions of Quebec, Ontario, the Prairie Provinces and British Columbia with very few people and very few roads, but the southern portions are well supplied. The Alaska Highway, built for military purposes during 1942 and extending 1,600 miles from Fort St. John, B.C., to Fairbanks, Alaska, now serves civilian as well as military traffic. It opens up a vast area of hitherto virgin territory and affords a means of land communication from Alaska through Canada to the United States.

Statistics of urban streets have been collected since 1935 from cities and principal towns; the small municipalities omitted would increase the totals very little. For 1946 the total number of miles of street reported was 14,326, composed of: 3,368 miles of bituminous pavements; 918 miles of portland cement concrete; 2,044 miles

of bituminous surfaces; 3,311 miles of gravel and crushed stone; and 390 miles of other surfaces; making a total of 10,031 miles of surfaced streets and 4,295 miles of earth roads. These figures for urban streets or roads are not included in the table of highway mileage.

### 1.—Classification of Highways, by Provinces, 1946

NOTE.—The date for which the mileage was reported is indicated for each province. The figures for Canada are the sums of the mileages so reported. Urban streets are not included in the figures.

<sup>3</sup> Includes road allowances.

### Subsection 2.—Motor-Vehicles

**Registration.**—Automobiles were registered in Canada for the first time in 1904 and Ontario was the only province to issue licences in that year. New Brunswick began registering cars in 1905; Quebec, Saskatchewan and Alberta in 1906; British Columbia in 1907; Manitoba in 1908; Nova Scotia in 1909; Prince Edward Island in 1913 and Yukon in 1914.

In 1905, only 565 motor-vehicles were registered in Canada but by 1915 the number had risen to 95,284 and by the end of the next decade to 724,048. With the exception of 1931-33 an annual increase was in evidence until 1941 when 1,572,784 motor-vehicles were registered. The number of commercial vehicles continued to increase during the war years but a considerable decline was shown in passenger cars due to restrictions on manufacture and the rationing of tires and gasoline. However, post-war recovery was rapid, registrations reaching a peak in 1948. The total of 2,035,352 registrations included 1,497,409 passenger cars, 499,736 trucks and miscellaneous vehicles, 4,268 buses, and 33,939 motorcycles. New motor-vehicles made available during 1948 totalled 229,489, comprising 152,336 passenger and 77,153 commercial vehicles.

Revenue from motor-vehicle licences, operator permits, etc., amounted to \$51,287,000 in 1948 compared with \$46,013,000 collected by the provinces in 1947.

## 2.—Motor-Vehicles Registered, by Provinces, 1939-48

NOTE.—Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc., but not trailers or dealer licences. Figures for 1904-35 are given at p. 668 of the 1937 Year Book; those for 1936-38 at p. 707 of the 1948-49 edition.

<sup>1</sup> Includes taxis.

<sup>2</sup> Includes service cars, tractors, etc.

<sup>3</sup> Included with trucks.

<sup>4</sup> Includes 1,549 vehicles and 126 motorcycles of the Department of National Defence carrying permanent plates.

<sup>5</sup> Estimated.

**Apparent Consumption of Automobiles.**—The apparent consumption of automobiles in Canada in any year may be computed by deducting the number exported from the sum of the production and imports. Statistics regarding retail sales and the financing of motor-vehicle sales in Canada are given in Chapter XXI of this volume.

#### 4.—Apparent Supply of New Automobiles, 1939-48

<sup>1</sup> Does not include repatriated Armed Forces vehicles.  
sold to public.

<sup>2</sup> Does not include military vehicles

**Finances of Road Transportation.**—The cost of road transportation to the people of Canada may be summarized under the following headings: expenditures on roads and highways; expenditures of individuals and corporations on owned motor-vehicles; expenditures for freight and passenger services rendered by motor-vehicle public carriers such as taxi, bus and motor-transport companies; and expenditures on garages, service stations, etc. Since expenditures on roads and highways are made almost entirely by governmental bodies, fairly complete statistics are available regarding them but, owing to the tremendous number of individuals and organizations that would have to be canvassed and the difficulties involved, complete statistics are not available under the other headings. Sales of gasoline are given at p. 762 and revenues of motor-carriers at p. 759.

**Expenditures on Roads and Highways.**—Roads in Canada, except in the Territories and the National Parks are under the jurisdiction of provincial and municipal authorities.

Provincial and municipal expenditures were sharply curtailed during the war years and a considerable backlog of essential repair, improvement and expansion work was accumulated. In 1946 approximately \$144,470,000 was expended on construction, maintenance and general expenditures for roads and bridges and in 1947 and 1948 outlays were much larger. Unit costs per mile of new construction increased greatly over pre-war levels and had a restrictive effect on the planned expansion of first class roads. However, the improvement and completion of the Trans-Canada Highway as a main artery of interprovincial travel will shortly be proceeded with as a joint responsibility of federal and provincial authorities.

### 5.—Construction, Maintenance and General Expenditures on Rural Highways, Bridges and Ferries, by Provinces, 1943-46

NOTE.—Expenditures are for the respective provincial fiscal years. Figures for each year since 1931 are given in the corresponding tables of previous Year Books beginning with the 1937 edition.

**Provincial Government Revenues from Motor-Vehicles.**—The taxation of motor-vehicles, garages, chauffeurs, etc., is an important source of provincial government income. In every province licences or permits, duly issued by the provincial authorities, are required for: motor-vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. A sales tax on gasoline is also levied by each province and to Mar. 31, 1947, there was also a federal tax of 3 cents but this was withdrawn on that date and for the most part provincial taxes were increased to absorb the federal rate. The rates in effect in 1949 are: for each of the three Maritime Provinces 13 cents; Quebec

and Ontario 11 cents; Manitoba 9 cents; Saskatchewan 10 cents; Alberta 9 cents; British Columbia 10 cents and Yukon 6 cents. The more important sources from which provincial revenues from motor-vehicles are derived are shown in Table 6. Federal Government revenues from import duties, excise and sales taxes are not included.

#### 6.—Provincial Revenues from the Registration and Operation of Motor-Vehicles, 1947 and 1948

NOTE.—Figures are for the respective provincial fiscal years, see Table 1, p. 754.

<sup>1</sup> Included with miscellaneous.

<sup>2</sup> Details for Quebec, were not supplied by the Province.

<sup>3</sup> Estimated.

<sup>4</sup> Federal tax additional: amounted to \$8,605,249, Jan.-Mar., 1947.

**Motor-Carriers.\***—The lack of statistical information regarding traffic on the highways led to the institution of a census of motor-carriers in 1941. The carriers are divided into two classes: passenger and freight. Each of these is subdivided into (a) carriers with revenues less than \$20,000, and (b) carriers with revenues of \$20,000 or over. Bus companies handling urban traffic exclusively are compiled as a class. Many street-railway systems operate motor-buses, but the statistics of such systems are not included here; they are included in electric-railway statistics. Licensed carriers doing highway construction work, building air fields, etc., are excluded from the compilations. Taxi operators and urban delivery trucks are also excluded, except where their operations include interurban business. Carriers operating as both passenger and freight carriers are classed as passenger or freight according to the preponderance of the revenue. The passenger revenue of trucking companies and the freight revenue of bus companies are small percentages of their total revenues.

\* Statistics are given in more detail in the annual report, "Motor Carriers, Freight-Passenger", obtainable from the Dominion Statistician, Ottawa.

**7.—Capital, Revenues, Employees and Equipment of Motor-Carriers, 1946 and 1947**

NOTE.—Large freight carriers include those with annual revenues of \$20,000 or over; small freight carriers those with annual revenues of from \$8,000 to \$20,000. Firms predominantly warehousing are excluded.

Table 8 shows the freight and passengers carried by motor-carriers in 1946 and 1947. Traffic data were not available for the majority of the small operators. Many truck operators failed to report tons of freight carried and others reported only estimates; consequently these data are not very informative. A difficulty in compiling weights, which is quite understandable, is that much traffic is carried on a load basis and not on a weight basis. Records of passengers appear to be fairly complete, possibly because tickets are sold and accounted for, and the unit is not so complex as for freight carried.

**8.—Traffic Carried by Motor-Carriers, 1946 and 1947**

NOTE.—Large freight carriers include those with annual revenues of \$20,000 or over; small freight carriers those with annual revenues of from \$8,000 to \$20,000. Firms predominantly warehousing are excluded.

**Motor-Vehicle Accidents.**—Motorists are required to report accidents but comprehensive statistics are not available for all provinces. The Health and Welfare Division of the Bureau of Statistics compiles statistics on all deaths from motor-vehicle accidents and these are shown in Table 9. A direct comparison of such statistics between the provinces is of little value due to differences in size, population, motor-vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor-vehicles has also been tabulated. These data still give no weight to differences in use of motor-vehicles, differences in climate, roads, tourist cars, etc., all of which are factors in accidents.

Table 10 shows the number of persons killed or injured in automobile accidents as reported by the motor-vehicle branches of the provincial governments. It is quite possible that the latter reported some persons as injured who subsequently died from injuries and these would be included in the fatalities of the vital statistics shown in Table 9; also accidents that occurred late in December and resulted in deaths would be charged to December by the provincial authorities but to January of the next year in the vital statistics. Consequently, the figures of fatalities of Tables 9 and 10 are not in complete agreement.

### 9.—Deaths Resulting from Motor-Vehicle Accidents, by Provinces, 1939-48

NOTE.—This table was compiled in the Health and Welfare Division, Dominion Bureau of Statistics. Figures for the years 1926-35 will be found at p. 578 of the 1941 Year Book and those for 1936-38 at p. 712 of the 1948-49 edition.

<sup>1</sup> Not analysed by personal injury and property damage.<sup>2</sup> Excludes New Brunswick.<sup>3</sup> Includes four accidents in the Northwest Territories—one pedestrian killed and three injured.<sup>4</sup> Total for provinces reporting.

**Gasoline Consumption.**—All provinces require retail sales of gasoline to be reported and a tax is imposed on all gasoline consumed by motor-vehicles using the highways and streets and also on that used for an increasing number of other purposes. However, the taxable gasoline is still largely consumed by motor-vehicles and indicates, in a general way, the increase or decrease in their use. Net sales are the differences between the total or gross sales reported and the quantities on which the tax is refunded in whole or in part, or on which the tax is not imposed at the time of sale.

Sales during the war years were, of course, materially affected by rationing, and large increases have followed the removal of restrictions.

<sup>1</sup> Not strictly comparable with the other provinces.

## PART IV.—WATERWAYS\*

**The Canada Shipping Act.**—Legislation regarding all phases of shipping is consolidated under the Canada Shipping Act (c. 44, 1934). The Act is a sequel to the passage of the Statute of Westminster in 1931, under which the Parliament of Canada accepted full responsibility for the regulation of Canadian shipping. The Canada Shipping Act is a comprehensive piece of legislation and constitutes, in fact, the incorporation in the shipping law of Canada of features of international agreements and of British and previous Canadian legislation. A brief summary of the Act is given at pp. 681-683 of the 1938 Year Book.

### Section 1.—Equipment, Facilities and Traffic

The developments and equipment to facilitate water traffic are classified under the sub-headings of shipping, aids to navigation, canals and harbours. Subsection 5 is added giving figures of administrative activities regarding pilotage service, steamship inspection and personnel shipped and discharged.

#### Subsection 1.—Shipping

Since all waterways including canals and inland lakes and rivers are open on equal terms, except in the case of the coasting trade, to the shipping of all countries of the world, the commerce of Canada is by no means entirely dependent upon Canadian shipping. However, a large part of the inland and coast-wise traffic is carried in ships of Canadian registry.

**Canadian Registry.**—Under Part I of the Canada Shipping Act, every ship that falls under the definition of 'British Ship' given in Sect. 6 of the Act and is controlled as to management and use in Canada must, unless registered elsewhere in the Commonwealth, be registered in Canada. An exception is made in the case of ships not exceeding 10 tons register and engaged solely in coastal or inland navi-

\* Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services, and marine services, by the Department of Transport and the National Harbours Board; part of the financial statistics, by the Department of Public Works; shipping subsidies by the Director of Subsidized Steamship Services, Canadian Maritime Commission; Panama Canal, by the Governor of the Panama Canal Zone; other canal traffic and statistics of shipping, by the Transportation Division, Dominion Bureau of Statistics.

gation. A ship (whatever her qualification for British registry) that is not registered in any part of the Commonwealth, is not entitled to the privileges accorded to British ships. Vessels about to be built *may* be recorded, and vessels being built or equipped *must* be recorded, by a registrar of British ships under the Act.

For a record of the number and tonnage of ships engaged in the carrying trade of Canada, see Table 2 and pp. 764, 769 and 771. The tables are included there under traffic statistics because they relate more directly to traffic and services than merely to the shipping available. For an account of the shipping services operated by the Federal Government, see pp. 775-777.

### 1.—Vessels on Canadian Shipping Registry, by Provinces, as at Dec. 31, 1944-48

NOTE.—Figures for 1935-43 are given in the corresponding tables of previous Year Books beginning with the 1941 edition.

**Shipping Traffic.**—A brief description of the early development of Canadian shipping is given at pp. 597-598 of the 1941 edition of the Year Book. Complete statistics, comparable with those given for the railways, showing all the freight carried by water, are not available. To obtain a record of the traffic handled by small independent coasting vessels would be difficult. However, there is a record of the number and tonnage of ships calling at all ports at which there are customs collectors and of cargoes of vessels trading between Canadian and foreign ports. Each vessel departing from port makes a statistical report which is forwarded to the Dominion Bureau of Statistics and from these reports compilations of shipping statistics are made.

Reports are not made for vessels of less than 10 registered net tons and the tonnage of tugs is the gross ton and not the net ton used for cargo vessels. Fishing vessels are not required by customs regulations to report when operating from certain ports; consequently, the data are not on the same basis as data for cargo vessels.

### 2.—Vessels Entered at Canadian Ports, 1941-48

NOTE.—Figures for the years ended Mar. 31, 1929-35 are given at p. 597 of the 1941 Year Book and for 1936-40 at p. 733 of the 1948-49 edition.

<sup>1</sup> One measured ton=40 cubic feet.

<sup>2</sup> Includes 91,247 tons loaded and 25 tons unloaded at Manitoba ports in 1946 and 153,503 tons loaded and 375 tons unloaded in 1947.

### Subsection 2.—Aids to Navigation

Included under this heading are the lighthouses and the whole system of marine danger signals on the east and west coasts of Canada, on Hudson Bay and Strait, the St. Lawrence River and Gulf, the inland rivers and lakes, and at the entrances to harbours—a very extensive system designed to provide safe navigation in all Canadian waters. In addition, a pilotage service is maintained in waters where navigation is difficult; this service is described under marine services at p. 776. As a further aid to safe navigation, there are chains of radio signal and direction-finding stations which are described under radiotelegraphy at pp. 813-815. Lists of aids to navigation, excepting very minor ones, are published by the Department of Transport.

#### 5.—Marine Danger Signals Maintained in Canada, Years Ended Mar. 31, 1943-49

NOTE.—In addition to the aids to navigation listed, approximately 9,006 unlighted buoys, balises, dolphins and beacons are maintained. The figures are supplied by the Department of Transport and do not include installations being taken over in Newfoundland. A table showing marine danger signals maintained during the years ended Mar. 31, 1929-40 is given at p. 581 of the 1941 Year Book. Figures for 1942 will be found at p. 716 of the 1948-49 edition.

A great deal has been done to improve navigable waters by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Probably the largest task of this nature has been the St. Lawrence River Ship Channel. An extensive floating plant is in service to maintain and improve the deep-water channel from Montreal to the sea for ocean-going shipping. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and for the control of roads and bridges that cross navigable channels. In order to prolong the season of navigation in important waters that freeze over in winter, ice-breaking operations are carried on at both the beginning and end of winter. This is particularly the case in connection with sea-going shipping from Montreal: these operations are primarily intended to prevent flood conditions during the spring ice break-up.

### 6.—Seasons of Open Navigation on the St. Lawrence Ship Channel, 1933-48

NOTE.—Figures for the years 1882-1911 are given at p. 756 of the 1934-35 Year Book and for 1912-32 at p. 615 of the 1942 edition.

Year	Channel Open, Quebec to Montreal <sup>1</sup>	First Arrival from Sea, Montreal Harbour	Last Departure for Sea, Montreal Harbour	Year	Channel Open, Quebec to Montreal <sup>1</sup>	First Arrival from Sea, Montreal Harbour	Last Departure for Sea, Montreal Harbour

<sup>1</sup> "Channel Open" means the route can be navigated although there may be floating ice in the river.

### Subsection 3.—Canals

The canals and canalized waters of Canada under the jurisdiction of the Department of Transport, comprise a series of waterways providing navigation for 1,875 miles inland from salt water. The canals may be divided into two classes: (1) the main or primary canals on the St. Lawrence River and the Great Lakes, including the Lachine, Soulages, Cornwall and Williamsburg Canals on the St. Lawrence River, the Welland Ship Canal between Lakes Ontario and Erie and the Sault Ste. Marie Canal between Lake Huron and Superior; and (2) subsidiary or secondary canals including the St. Peters Canal between Bras d'Or Lake and the Atlantic Ocean, Cape Breton, the St. Ours and Chambly Canals on the Richelieu River, the St. Anne, Carillon and Grenville Canals on the Ottawa River, the Rideau Canal between the Ottawa River and Lake Ontario and the Trent and Murray Canals between Lake Ontario and Georgian Bay.

The importance of this transportation system as a highway of commerce is evidenced by the fact that, during 1948, 23,559,313 tons of freight passed through, the second highest tonnage since 1916; the peak was reached in 1938 when the freight traffic amounted to 24,636,462 tons. In 1948, 22,643 vessels passed through the canals compared with 20,874 in 1947.

In addition to freight and passenger vessels, there were thousands of pleasure craft locked through the canals. The number of passengers on vessels locking at Sault Ste. Marie reached 63,707 in 1948 as compared with 53,782 in 1947.

Revenue from the canals during the year ended Mar. 31, 1948, amounted to \$1,017,412, of which \$826,207 was derived from rentals for hydraulic and land privileges and wharfage.

The names of the various canals along these routes, their locations and lengths, together with the number and dimensions of the locks thereon and other information may be found in the bulletin "Canals of Canada", published by the Department of Transport.

Under the jurisdiction of the Federal Department of Public Works are the St. Andrews Lock (length, width and draught, respectively, 215, 45 and 17 ft.) at Selkirk on the Red River, Man., and the lock at Poupore, Que. There are also a few small isolated locks, each controlled under the authority of the province in which it is situated.

Table 7 shows the length and lock dimensions of canals under the administration of the Department of Transport, as at the end of 1948.

**7.—Length and Lock Dimensions of Canals under the control of the Department of Transport, 1948**

St. Peters.....	St. Peters Bay to Bras d'Or Lakes, Cape Breton, N.S.....	0.50	1	300	48	18 <sup>6</sup>

<sup>1</sup> Navigable depths are occasionally less at times of extremely low water. <sup>2</sup> Minimum depth between locks 23 ft.

<sup>3</sup> Notice must be given by vessels of more than 6 ft. 10 in. draught.

<sup>4</sup> Marine railways in this section limit navigation to vessels 60 ft. long 13.5 ft. wide and 4.0 ft. draught.

<sup>5</sup> Minimum depth of canal with Lake Ontario at elevation 244 ft. above sea-level is 9.5 ft. <sup>6</sup> The depth of canal prism is 17 ft.

**Canal Traffic.**—The canals of Canada are open to the vessels and traffic of all nations upon equal terms and thus United States traffic constitutes an important part of the total carried through certain canals, especially the Welland Ship Canal. This is shown in Tables 8 and 10. More complete details of the traffic through canals may be found in the annual report "Canal Statistics" published by the Dominion Bureau of Statistics.

### 8.—Traffic through Canadian Canals, by Nationality of Vessel and Origin of Freight, Navigation Seasons, 1939-48

NOTE.—Figures include duplications where cargoes use two or more canals. For Canadian canal traffic from 1886-99, see the 1902 Year Book, p. 398; for figures for 1900-10, the 1933 edition, p. 697; for 1911-35 p. 703 of the 1938 edition; and for 1936-38, p. 736 of the 1948-49 edition.

<b>Totals.....</b>	<b>5,829,195</b>	<b>17,730,118</b>	<b>11,169,714</b>	<b>12,389,599</b>	<b>23,559,313</b>	<b>+2,045,374</b>

<sup>1</sup> Figures for the United States include small percentages of traffic from other foreign countries.

The figures in Tables 9 and 10 include duplications where the same freight passes through two or more canals, but in Table 11 duplications in the traffic passing through the St. Lawrence and Welland Ship Canals and the Canadian lock at Sault Ste. Marie have been eliminated.

Grain transhipped at Georgian Bay, Lake Erie, or other ports above Montreal is treated as new cargo and as most of this grain has passed through either the Canadian or United States locks at Sault Ste. Marie there are still duplications in the data because of this treatment. These duplications cannot be avoided when net totals for the Canadian canals are computed because it is impossible to ascertain which lock at Sault Ste. Marie was used by the grain reloaded at Port Colborne, Ont., or other transhipping port.

**11.—St. Lawrence-Great Lakes Traffic Using St. Lawrence, Welland Ship and Sault Ste. Marie Canals, 1948**

<sup>1</sup> Through both Canadian and United States locks at Sault Ste. Marie.

Traffic through the Sault Ste. Marie canals, Canadian and United States, has been approximately twice as heavy as the traffic through the Panama Canal during the latest ten years for which records are available, and in 1940 was almost three times as heavy. It has varied from a low of 20,484,000 tons in 1932, which was less than the Panama traffic, to a high of 120,200,814 tons in 1942. The dominant traffic, from a tonnage aspect, is iron ore. During the past 50 years this has fluctuated

from 4,901,000 tons in 1892, an average of 50,000,000 tons in the 1920's, a low of 3,607,000 tons in 1932 and to a peak of 94,326,578 tons in 1942. Although wheat has ranged as low as only 7 p.c. of the iron-ore tonnage, its value has generally been greater than that of the iron-ore traffic, and has been the most valuable single commodity passed through the canals; in 1928 the value of wheat passed through the canals was 40 p.c. of the value of all traffic. Other grains have been about one-quarter to one-fifth of the wheat tonnage and a smaller ratio of the value.

Bituminous coal has generally been second in tonnage to iron ore increasing from 15,529,045 tons during the 1947 season to 16,558,048 tons in 1948.

**The Panama Canal.**—The Panama Canal, which was opened to commercial traffic on Aug. 15, 1914, has been a waterway of great importance to British Columbian ports, from which vessels leave direct for British and European ports throughout the year. As an alternative route to that of the transcontinental railway lines, such a passage by water is of vital importance in the solution of the larger transportation problems of the Continent. During the First World War the great expectations based upon the opening of the Canal were not realized, owing to the scarcity of shipping. However, with the post-war decline in ocean freight rates, an increase in traffic between Canada's Pacific ports and Europe took place and, while the proportion carried in vessels of Canadian registry was comparatively small, the cargo tonnage nevertheless assumed considerable proportions. During the war years 1940-45, the volume of Canadian traffic through the Canal was greatly reduced.

#### 12.—Traffic To and From the East and West Coasts of Canada via the Panama Canal, Years Ended June 30, 1939-48

NOTE.—Figures for the years 1921-28 are given at p. 707 of the 1938 Year Book and those for 1929-38 at p. 738 of the 1948-49 edition.

### Subsection 4.—Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for such bulk freight as lumber, coal, oil, grain, etc. Facilities may include cold-storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil-storage tanks and, in the chief harbours, dry-dock accommodation.

Eight of the principal harbours of Canada are administered by the National Harbours Board. Seven other harbours come under the supervision of the Department of Transport and are administered by commissions that include municipal as well as Federal Government appointees. In addition, there are about 300 public harbours coming under the direct supervision of the Department of Transport. These harbours are administered under rules and regulations approved by the Governor General in Council. Harbour masters have been appointed by the Minister of Transport for 131 of these harbours, their remuneration being made from fees levied on vessels under the terms of the Canada Shipping Act.

At most ports, in addition to the harbour facilities operated by the National Harbours Board or other operating commission, there are dock and handling facilities owned by private companies such as railway, pulp and paper, oil, sugar industries, etc. At a number of ports there are also graving docks that are dealt with separately.

### 14.—Facilities of Six of the Principal Harbours, as at Dec. 31, 1948

NOTE.—The facilities include those under the control of other agencies as well as those of the National Harbours Board at these ports.

**National Harbours Board.**—A description of the origin and functions of the National Harbours Board is given at pp. 679-681 of the 1940 Year Book. The Board is responsible for the administration and operation of the following properties (representing a capital investment of approximately \$225,000,000): port facilities such as wharves and piers, transit sheds, grain elevators, cold-storage warehouses, terminal railways, etc., at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Three Rivers, Montreal, Vancouver and Churchill; grain elevators at Prescott and Port Colborne; the Jacques Cartier Bridge at Montreal and the Second Narrows Bridge at Vancouver. Operating revenues and expenses for these properties are given in Table 27, p. 784.

**Harbour Traffic.**—The freight movement through a large port takes a number of different forms. The overseas movement, i.e., the freight loaded into or unloaded from sea-going vessels, frequently constitutes a surprisingly small part of the total. Usually the volume coming in and going out by coastwise vessels is larger. Then there is the 'in transit' movement in vessels that pass through the harbour without loading or unloading. Finally there is the movement from one point to another within the harbour, which in many ports amounts to a large volume. It is not possible to obtain statistics of the total freight handled in all the ports and harbours of Canada, as many of them are small and without the staff necessary to obtain a detailed record of freight handled. The National Harbours Board reports annually the water-borne cargo loaded and unloaded at the eight ports under its control. Six of these are among the principal ports of Canada and the cargo handled in each is shown in Table 15. The figures include freight carried by coastwise and inland international, as well as by sea-going shipping; they include all cargo loaded or unloaded whether by facilities under the Board or at private docks and terminals in these ports. Cross-harbour movements, ballast (non-revenue), bunkers, ships' stores, mail and passengers' baggage are excluded.

**Graving Docks.**—The Department of Public Works of the Federal Government has constructed five dry docks. The dock at Kingston, Ont., is under lease to the Kingston Shipbuilding Company, while the old Esquimalt dry dock was temporarily transferred to the Department of National Defence on Nov. 1, 1934. When commercially required, it will be returned to the control of the Department of Public Works. The large dry docks at Lauzon, Que., and Esquimalt, B.C., can be divided into two parts and were built at a cost of approximately \$3,850,000 each. The dimensions of graving docks owned by the Federal Government and the dimensions and cost of those subsidized under the Dry Dock Subsidies Act (9-10 Edw. VII, c. 17, 1910) are given at p. 720 of the 1948-49 Year Book.

**Subsection 5.—Marine Services and Operations of the Federal Government**

The services covered by this Subsection are those dealing with steamship inspection, pilotage service, sea-faring personnel and accidents to shipping, and the operations are those of the Canadian Government Merchant Marine, Limited, and the Canadian National (West Indies) Steamships, Limited.

**Steamship Inspection.**—The Steamship Inspection Service provided for under Part VII of the Canada Shipping Act, 1934, consists of a headquarters staff at Ottawa and staffs of inspectors at the principal ocean and inland ports. The Board of Steamship Inspection decides on questions arising out of the administration of the Act. The Service is responsible for the administration and carrying out of the provisions of the Act respecting the periodic inspection of power-driven ships and the issue of inspection certificates; the assignment of load lines; the conditions under which dangerous goods may be carried in ships; the protection against accident of workers employed in loading or unloading ships; and also for the administration and carrying out of the provisions relating to the certification and employment of marine engineers

**Pilotage.**—This service functions under the provisions set forth in Part VI of the Canada Shipping Act, 1934. Qualified pilots may offer their services to the stranger in local and confined waters. At the same time, pilotage might also be considered as a method of insurance.

There are 42 pilotage districts in Canada, nine of which (Sydney, Bras d'Or Lakes, Halifax, Saint John, Quebec, Montreal, St. Lawrence-Kingston-Ottawa, Churchill, and British Columbia) are under the Minister of Transport as pilotage authority. The other districts function under local pilotage authorities appointed by the Governor in Council under the provisions of the Canada Shipping Act.

Table 17 shows, by major ports and area, the number and aggregate tonnage of ships using pilots during the years ended Mar. 31, 1947 and 1948. Corresponding statistics are not available for the St. Lawrence-Kingston-Ottawa district.

## 17.—Pilotage Service by Districts, Years Ended Mar. 31, 1947 and 1948

1943.....	19,255	15,250	1948.....	59,768	60,793

**Canadian Government Merchant Marine.**—The circumstances under which the Canadian Government became possessed of, and responsible for, the operations of a merchant marine are explained at p. 776 of the 1934-35 Year Book. A table showing the operating results from 1919 to 1936 is given at p. 689 of the 1937 Year Book.

The original fleet of the Canadian Government Merchant Marine, Limited, consisted of 66 vessels with a total deadweight tonnage of 391,212. The original cost of the fleet was \$79,661,921 and the capital loss thereon was \$74,239,356, the total capital recovery of \$5,422,565 being made up as follows: (1) the sale of 56 vessels for \$2,378,018; (2) the proceeds of insurance on four vessels lost, amounting to \$2,111,475; (3) the sale of six vessels to the Canadian National (West Indies) Steamships, Limited, for \$933,072.

The charter of the Canadian Government Merchant Marine, Limited, and its subsidiary companies, although inactive since 1936, had not been surrendered and in 1940 the Company was reconstituted and is operating on behalf of the Canadian Government certain ships seized in prize and either requisitioned for use by the Canadian Government or condemned by the Court.

**Canadian National (West Indies) Steamships, Limited.**—In conformity with the Canada-West Indies Trade Agreement of 1926 (16-17 Geo. V., c. 16) the Federal Government has provided direct steamship services to the West Indies through the medium of Canadian National (West Indies) Steamships, Limited.

At the end of 1948, the Canadian National Steamships, Limited, owned and operated ten vessels between Canada and the British West Indies.

### 19.—Financial Statistics of Canadian National (West Indies) Steamships, Limited, 1939-48

NOTE.—Statistics for the years 1929-38 are given at p. 620 of the 1942 Year Book.

## Section 2.—Financial Statistics of Waterways

The principal statistics available that give any idea of the cost of water-borne traffic consist of the record of public expenditures on waterways. Such expenditures may be classified as capital expenditures, or investments and expenditures for maintenance and operation. Revenues from operation are also recorded. Undoubtedly, in so far as capital expenditures for the permanent improvements of waterways are concerned, those of the Federal Government cover the major part. There has been some expenditure by municipalities on local harbour facilities, and private capital expenditure is also confined almost entirely to terminal or dockage facilities. The investment in shipping, however, with the exception of the Canadian Government Merchant Marine, Limited, and the Canadian National (West Indies) Steamships, Limited, has come almost entirely from private sources. No figures are available regarding private investment in shipping except those appearing in the reports of the operating companies which cover only a portion of the field. Neither are there statistics showing the revenues of ship operators from passenger and freight traffic.

**Capital Expenditures.**—The only figures available of capital expenditures on Canadian waterways are those compiled from the "Public Accounts" and the annual reports of the Departments of Transport, Public Works and Finance. However, such expenditures cannot be regarded as any indication of the present worth of the undertakings represented. The costs of building canals and other waterways and permanent works to facilitate water transportation in Canada are represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment of earlier works where they had been superseded, as in the first Welland Canals for instance. To this extent such figures are an overstatement of the present value of the works in use. There is a further limitation that should be noted in regard to such figures: they do not include the costs of maintenance and improvements or the operation of these works, such charges having been made to the Consolidated Deficit Account as annual expenditures and not to capital account. Table 20, which shows capital expenditures on canals, marine service and miscellaneous water-transport facilities to have reached the grand total of over \$386,930,000 must be interpreted with the above qualifications in mind. In Table 21, the capital values of the fixed assets administered by the National Harbours Board are shown as at Dec. 31, 1947 and 1948: these are in addition to the capital expenditures of Table 20. These figures reflect the capital situation in regard to the national harbours of Canada far better than do those of Table 20 in the case of waterways and facilities, inasmuch as they include all buildings, machinery and durable plant improvements; they have also been subject to deductions for depreciation and the scrapping or abandonment of plant and more nearly approach the present value of the properties under the administration of the National Harbours Board.

Table 22 shows the amounts advanced by the Federal Government to the Harbours Boards for capital expenditures from 1946 to 1948.

## 20.—Capital Expenditures of the Federal Government on Canals, Marine Service and Miscellaneous Water Transport Facilities, as at Mar. 31, 1947 and 1948

## Waterway Expenditures and Revenues on Consolidated Fund Account.—

Expenditures under this heading (Tables 23 to 25) are mainly for the operation and maintenance of various facilities for water transport, but unfortunately the line between operation and maintenance expenditure is not as finely drawn as is desirable.

In addition to the recurrent expenditures to facilitate water transportation shown here, the Federal Government expends annually a considerable amount to cover deficits of the Canadian National (West Indies) Steamships, Limited, and of the National Harbours Board, for mail subsidies and steamship subventions as shown in Table 28. Operating expenditures and revenues of facilities administered by the National Harbours Board are shown separately in Table 27. The National Harbours Board operates as a statutory corporation. The improvement in the financial results since control was unified under the Board is indicated by the increase of consolidated operating income from \$2,452,000 in 1935 to \$5,242,276 in 1948. Revenues in connection with waterways of the Department of Transport and the Department of Public Works are shown in Table 26, pp. 783-784.

### 23.—Expenditures on Canals Charged to Consolidated Deficit Account, Years Ended Mar. 31, 1947 and 1948

NOTE.—Compiled from the Annual Reports of the Department of Transport.

**Canadian Maritime Commission.**—By authority of an Act (11 Geo. VI, c. 52) passed in the 1947 session of Parliament, the Canadian Maritime Commission was constituted for the purpose of examining into, keeping records of, and advising the Minister of Transport on matters pertaining to Canadian shipping and ship-building services.

In addition to these duties the Act also empowers the Commission to:—

- (1) exercise and perform on behalf of the Minister such powers, duties and functions of the Minister under the Canada Shipping Act, 1934, as the Minister may require;
- (2) administer, in accordance with regulations of the Governor in Council, any steamship subventions voted by Parliament; and
- (3) exercise or perform any other powers, duties or functions conferred on or required to be performed by the Commission by or pursuant to any other Act or order of the Governor in Council.

Since the Canadian Maritime Commission was created, it has assumed all responsibilities for the administration of steamship subventions which had formerly been under the jurisdiction of the Department of Trade and Commerce.

As of Feb. 1, 1948, the Park Steamship Company, Limited, a Crown Company formed to administer and operate wartime shipping constructed in Canada as a war measure, was transferred from the Department of Reconstruction and Supply to the Canadian Maritime Commission.

All the vessels constructed during the war years for operation by the Park Steamship Company, Limited, have been sold. Private Canadian operators purchased them under agreement that they would not be transferred out of Canadian registry except by permission of the Crown; a Government announcement, dated May 13, 1948, made public that such transfers might be made providing sanction was first obtained from the Canadian Maritime Commission, which body would deal with each application on its individual merits. The proceeds from the sale of such vessels are to be deposited in escrow and used for replacement by new merchant vessels of modern design and of a type and cost approved by the Commission.

**Shipping Subsidies.**—The figures given in Table 28 represent the amounts paid in connection with contracts made under statutory authority by the Canadian Maritime Commission for coastal and inland water shipping services, including the conveyance of mails on certain routes.

## PART V.—CIVIL AIR TRANSPORTATION\*

### Section 1.—Administration and Development†

**Historical Developments.**—Canada's aviation history dates back to 1909 when the *Silver Dart* piloted by Jack McCurdy (now the Hon. J. A. D. McCurdy, Lieutenant-Governor of Nova Scotia) flew at Baddeck, N.S. This was the first aeroplane flight by a British subject in the British Empire.

There was little aviation development in this country until the First World War. Following the War, many of Canada's wartime aviators assisted in developing air transportation services into inaccessible areas, air forestry patrols and inter-city air services. During this period, the flying clubs movement received Government assistance in the training of pilots and engineers required by Canada's civil aviation industry.

The Department of Transport was created in 1936 to centralize all transportation services coming under Federal jurisdiction. One of the branches of this new Department was the Air Services Branch which combined the Civil Aviation Division, formerly attached to the Department of National Defence, and the Department of Marine's Meteorological and Radio Divisions. Under the Department of Transport, the trans-Canada airways system was developed by the construction of a chain of airports, intermediate aerodromes and other air facilities. The Trans-Canada Air Lines came into being by Act of Parliament in 1937 to provide for the development of a government-controlled transcontinental air service.

\* For military air transportation, see Chapter XXVII on Defence of Canada.

† Sections 1 and 2 of Part V of this Chapter were revised in the Department of Transport and Section 3, except where otherwise indicated, in the Transportation Division, Dominion Bureau of Statistics.

The Second World War was a period of intensive construction of airports and aerodromes to meet the requirements for training of airmen under the British Commonwealth Air Training Plan. At the end of the War, many service-trained Canadian airmen turned to commercial flying and were absorbed in existing operating companies or helped to develop other flying services. Transatlantic air services, which were inaugurated by the Department of Transport during the War, were turned over to Trans-Canada Air Lines for operation as regular scheduled operations.

Canadian Pacific Air Lines was created by the amalgamation of small commercial operators for the servicing of Canada's northland. The Canadian Pacific Air Lines has been designated to provide trans-Pacific services on behalf of Canada. Canadian Pacific Air Lines began its scheduled operations from Vancouver to Australia and New Zealand in July, 1949, and expected to begin operating a service to Japan, China and Hong Kong later in the year.

**The Control of Civil Aviation.**--The control of civil aviation in Canada is under the jurisdiction of the Federal Government and is administered under the authority of the Aeronautics Act, 1919, and amendments thereto. The Aeronautics Act is in three parts. Broadly speaking, Part I deals with the technical side of civil aviation, comprising matters of registration of aircraft, licensing of airmen, the establishment and maintenance of airports and facilities for air navigation, air-traffic control, accident investigation and the safe operation of aircraft. This part of the Act is administered by the Controller of Civil Aviation under the supervision of the Director of Air Services, Department of Transport. Part II of the Act deals with the social and economic aspects of commercial air services and assigns to the Air Transport Board certain statutory functions with respect to the issue of licences to operate commercial air services, and the subsequent economic regulation of commercial air services in accordance with the dictates of the public interest. Part III of the Act deals with matters of internal government administration in connection with the Act.

**Recent Developments.**--Scheduled operations of the Great Lakes air route, that went into operation in 1947, have been expanded. This shorter line in the trans-Canada airways system was completed with the co-operation of United States authorities, by the construction of intermediate airports on the south shore of Lake Superior.

Instrument Landing Systems (I.L.S.) to facilitate safe landings under low visibility conditions have been installed at seven major airports in Canada and installations are being made at nine other airports. Canada was to the forefront among air-minded nations in the installation of I.L.S. which was adopted in July, 1949, by the International Civil Aviation Organization for international flying.

Twelve of Canada's civil airports extending from coast to coast are now regular ports of call for international commercial air services. Considerable research has been made into the problem of constructing airports to withstand the weight of modern transport aircraft and in this Canada has developed an economical airport design that is meeting the requirements of both national and international aviation.

Further expansion of the aviation weather forecasting services, provided by the Meteorological Division, has been made possible by the establishment of weather observing stations in sparsely populated Arctic and sub-Arctic regions including

outposts on the most northerly islands bordering the Arctic Ocean. Canada also maintains a weather-ship stationed in the Atlantic between Newfoundland and Greenland for assisting transatlantic aviation.

The radio range system, which provides radio beams for guiding aircraft along the airways under all weather conditions, has kept abreast of the extensive development of airways and the demands of civil aviation. Other radio facilities for aviation have been developed and put into operation.

Marked progress is reflected in the continuous increase in scheduled airline operations both within Canada and beyond its boundaries. In addition to transportation, agriculture, forestry and industry have benefited greatly by such operations as aerial dusting, photography and surveys.

In the field of commercial aircraft, the four-engined *North Star* airliner manufactured by Canadair Limited, and the single-engined *Beaver* manufactured by de Havilland Aircraft of Canada, Limited, are two newcomers which, in their respective fields, have played a most important part.

In the field of international civil aviation, Canada has played a prominent part through participation of its personnel in the deliberations of the International Civil Aviation Organization, with its headquarters at Montreal, Que.

**Flying Training.**—A new Flying Training Plan for Canada went into operation on Jan. 1, 1949, whereby approved flying clubs and schools as well as qualifying student pilots receive Federal Government grants for flying training. Clubs and schools benefiting under this Plan are required to provide flying training conforming to the Department of Transport's approved course of pilot training. Student pilots are required to qualify for a Department of Transport private pilot licence in accordance with the agreed international standards set by the International Civil Aviation Organization.

Under the Flying Training Plan, clubs and schools receive \$100 for each individual granted a private pilot licence obtained *ab initio* at a club or school. Students qualifying as private pilots and receiving a Department of Transport licence receive a grant of \$100. Students who have qualified for a Department of Transport private pilot licence may qualify for an additional \$100 grant on being accepted into the Royal Canadian Air Force Active Force, Reserve or Auxiliary under special Royal Canadian Air Force requirements.

**Royal Canadian Flying Clubs.**—In the spring of 1949 there were 36 member clubs of the Royal Canadian Flying Clubs Association with a total individual membership of 6,300, an increase of approximately 100 p.e. over the corresponding period in 1948. Revenue flying hours for the year ended Mar. 31, 1949, numbered 34,436, utilizing 156 aircraft.

On behalf of a committee under the chairmanship of the Controller of Civil Aviation, the Royal Canadian Flying Clubs Association sponsors and conducts the Webster Memorial Trophy Competition for amateur pilots. The Association also provides scholarship flying training for Canadian air cadets.

**Air Industries and Transport Association.**—Commercial flying schools which are members of the Air Industries and Transport Association, numbered 94 on Mar. 31, 1949. Student enrolment in these schools totalled 1,803 as compared with 1,558 in the preceding year. Instructional hours flown during the year numbered 39,114, utilizing 247 aircraft.

**International Air Agreements.**—Its position in the field of aviation as well as its geographical location makes it imperative that Canada should co-operate with other nations of the world engaged in international civil aviation. Canada played a major part in the original discussions that led to the establishment of the International Civil Aviation Organization, generally known as ICAO, which now has its headquarters at Montreal. Canada has actively participated in the deliberations of ICAO and its many committees, and as a result has secured the benefit of the joint knowledge and experience of all member states in the technical and economic aspects of all phases of civil aviation.

In recent years Canada was a signatory to the following Agreements concerning civil aviation:—

Exchange of Notes (July 28, 1938) recording an Agreement between Canada and the United States of America relating to Air Navigation. (Effective Aug. 1, 1938.)

Exchange of Notes (July 28, 1938) recording an Agreement between Canada and the United States of America relating to the Issuance of Certificates of Competency or Licences for the Piloting of Civil Aircraft. (Effective Aug. 1, 1938.)

Exchange of Notes (July 28, 1938) recording an Agreement between Canada and the United States of America relating to Certificates of Airworthiness for Export. (Effective Aug. 1, 1938.)

Memorandum of Agreement between Canada and Newfoundland relating to the establishment of an Air Base at Goose Bay, Labrador. Signed at St. John's, Newfoundland, Oct. 10, 1944.

Exchange of Notes (Feb. 17, 1945) between Canada and the United States of America recording an Agreement for Civil Air Transport. (Effective Feb. 19, 1945.) (New York Agreement.)

Exchange of Notes (Apr. 10 and 12, 1947) between Canada and the United States of America amending the Exchange of Notes (Feb. 17, 1945) between the two countries recording an Agreement for Civil Air Transport.

Agreement for Air Services between Canada and the United Kingdom. Signed at Bermuda, Dec. 21, 1945.

Agreement for Air Services between Canada and Australia. Signed at Ottawa, June 11, 1946.

Agreement between the Governments of Canada and Newfoundland on Air Transport between Canada and Newfoundland. Signed at St. John's, July 29, 1946.

Agreement between the Government of Canada and the Government of Portugal for Air Services between Canadian and Portuguese Territories. Signed at Lisbon, Apr. 25, 1947.

Exchange of Letters (Jan. 31 and Feb. 1, 1947) between Canada and the United Kingdom constituting an Agreement concerning the Grant to Airlines of Traffic Rights in Fiji and Canton Islands.

Agreement between the Government of Canada and the Government of Sweden for Air Services between Canadian and Swedish Territories. Signed at Ottawa, June 27, 1947.

Exchange of Notes (June 27 and 28, 1947) between Canada and Sweden supplementing the Agreement for Air Services between Canadian and Swedish Territories, dated June 27, 1947.

Agreement between Canada and the United Kingdom concerning the Establishing of Air Communications between the Territory of Canada and United Kingdom Territories in the West Atlantic and Caribbean Areas. Signed at Ottawa, July 17, 1947.

Agreement between Canada and Ireland for Air Services between the two countries (signed at Dublin, Aug. 8, 1947) with Exchange of Notes (Apr. 19, May 31 and June 3, 1948) amending the Agreement.

Agreement between Canada and the Netherlands for Air Services between the two countries. Signed at Ottawa, June 2, 1948.

Exchange of Notes recording an Agreement regarding the Use of Radio for Civil Aeronautical Services. Signed at Washington, Feb. 20, 1939.

Convention on International Civil Aviation. Signed at Chicago, Dec. 7, 1944.

International Air Services Transit Agreement. Signed by Canada, Feb. 10, 1945.

International Agreement on North Atlantic Ocean Weather Station. Signed at London, Sept. 25, 1946.

Agreement concerning the Operation of Icelandic Station of the North Eastern Loran Chain. Signed at Montreal, Apr. 30, 1947. (Treaty Series No. 13, 1947.)

Convention for the Unification of certain rules relating to International Carriage by Air. Signed at Warsaw, Oct. 12, 1929. Canada became a signatory to the Convention by Proclamation, dated June 13, 1947.

**Recent Bilateral Air Agreements.**—As a result of the entry of Newfoundland into union with Canada on Mar. 31, 1949, new Agreements have been signed between Canada and the United States, the United Kingdom and Belgium.

On the North Atlantic, Trans-Canada Air Lines has been given new rights in the United Kingdom for traffic from Ireland, Iceland and the Azores. It has been given rights in Brussels by the Belgian Government, adding another possible continental stop to the one previously granted at Amsterdam in the Netherlands.

On the Caribbean route, Canada has obtained rights from the United States for a traffic stop at Tampa—St. Petersburg, Florida, and additional points of call at British territories in the Caribbean, notably Barbados, Antigua and British Guiana.

In the trans-Border field Canada is conducting negotiations to obtain the right for Trans-Canada Air Lines to operate from Montreal to New York.

In the Pacific, new agreements provide that on its South Pacific run Canadian Pacific Air Lines may also make traffic calls at Honolulu and at Fiji. On the North Pacific route Canadian Pacific Air Lines has been given traffic rights at Hong Kong.

## Section 2.—Air Services

Air Transport Services are grouped into two broad classes—Scheduled Services and Non-Scheduled Services:

*Scheduled Services.*—These provide regular point-to-point service on scheduled advertised routes.

*Non-Scheduled Services.*—These include:—

- (1) Specific Point Services from a designated base to specific points on the basis of unit rates that may be undertaken as the traffic warrants and that are not on a time schedule;
- (2) Chartered Services operated on the basis of the private chartering of an entire aircraft for a specific trip;
- (3) Contract Air Services which operate on one or more specific contracts. These do not operate on a time schedule nor need the contractor take the entire space of the plane;
- (4) Specialty Air Services concerned with large-scale forestry and utility surveys according to some specific agreement.

**Trans-Canada Air Lines.**—Air traffic over the Trans-Canada Air Lines was greatly increased in 1948-49 by the addition of 20 40-passenger North Star aircraft to the Company's fleet, thus enabling modern air transportation to be provided on a large scale. Travel and shipping time has been reduced by the introduction of this faster and larger Canadian-built equipment. The new aircraft were placed in transcontinental service on June 1, 1948, flying two round trips daily between Montreal and Vancouver with stops at Toronto, Winnipeg and Calgary and reducing transcontinental travel time to 14 hours.

Local services in the Prairie Provinces in 1948-49 were extended by including Brandon and Yorkton on the Winnipeg-Regina route. The prairie cities of Lethbridge, Edmonton, Saskatoon, Regina, Medicine Hat and Swift Current were linked by feeder service to the mainline route. Flight frequency of the Ontario service between Toronto, North Bay, Porquis Junction and Kapuskasing was placed on a daily basis. A second daily flight was added between Toronto, Sault Ste. Marie, the Lakehead and Winnipeg. Direct operations commenced between Sydney, N.S., Moncton and Saint John, N.B.

In the domestic service of Trans-Canada Air Lines, 562,170 passengers, 2,772,985 ton miles of mail and 1,581,879 ton miles of commodity traffic were carried during the year ended Mar. 31, 1949. This compares with 438,549 passengers, 1,311,764 ton miles of mail and 645,771 ton miles of commodity traffic in the previous year. These figures include the emergency service provided in British Columbia in a three-week period in the early summer when all surface connections with that Province were severed by floods. Flying its larger aircraft across the Rocky Mountains in as many as six round flights a day, Trans-Canada Air Lines moved 9,000 persons, and 600,000 lb. of food and other essential cargo. Included also was the general carriage of first-class mail by air at unchanged postal rates. As a result of this service, Canadians now enjoy the most inexpensive air-mail service in the world.

At the end of 1949, the Trans-Canada Air Lines fleet consisted of 20 four-engined North Stars and 27 twin-engined DC-3's.

### 1.—Passenger, Freight and Mail Traffic of Trans-Canada Air Lines, 1939-48

Source: Trans-Canada Air Lines Annual Report.

Year	Revenue Passenger Traffic <sup>1</sup>		Revenue Freight Traffic <sup>2</sup>		Mail Traffic
	No.	Passenger miles	lb.	ton miles	ton miles
1939.....	21,569	12,068,661	67,729	41,749	306,252

1946.....	8,047,124	378,185	3,780,509	12,810,805	13,926,061	-1,269,624
1947.....	10,450,524	534,359	3,808,197	15,297,347	16,796,492	-1,761,043
1948.....	14,469,578	888,917	4,648,775	20,866,936	21,624,057	-1,183,022

<sup>1</sup> Express and excess baggage. <sup>2</sup> Includes other revenue. <sup>3</sup> Interest and exchange charges excluded each year except in 1946, 1947 and 1948. <sup>4</sup> Includes interest on capital invested.

*Trans-Canada Air Lines (Atlantic) Limited.*—Additional to its transatlantic service, Trans-Canada Air Lines (Atlantic) opened two new international air services in 1948, one to Bermuda and the other to the British West Indies.

The Bermuda service began on May 1, 1948, with two round trips scheduled weekly from Montreal and Toronto. On Nov. 1, 1948, a third flight was added. Flying time is about five hours.

Operations to the Caribbean began on Dec. 2, 1948. This 3,000-mile route proceeds from Montreal to Toronto, Nassau (Bahamas), Kingston (Jamaica), and Port of Spain (Trinidad). Two flights are made weekly, one terminating at Jamaica and the other continuing to Trinidad.

Under charter contract first with the Province of Ontario and then with the Federal Government, Trans-Canada Air Lines brought to Canada 6,000 immigrants from the United Kingdom and the Continent in 175 westbound crossings during the year 1948-49. It was the largest mass movement of immigrants in air-transport history.

Overseas flights during the year ended Mar. 31, 1949, accommodated 39,796 passengers, 381,988 ton miles of mail and 1,099,393 ton miles of commodity transport. This compared with 17,657 passengers, 334,643 ton miles of mail and 662,116 ton miles of commodity transport in the preceding year.

*Canadian Pacific Air Lines Limited.*—Further progress in consolidating and improving established Canadian Pacific Air Line services and facilities was made in the year 1948-49. The Vancouver-Calgary service via the Okanagan Valley, which was inaugurated in 1947, continued to show satisfactory development and was extensively used for the special movement of passengers and goods during the British Columbia flood emergency in the summer of 1948.

Additional new routes operated during the year 1948-49 included the service between Vancouver and Whitehorse via Sandspit and between Dawson City and Aklavik. A licence was also granted for a scheduled service between Montreal and Val d'Or, Que. The Vancouver-Nanaimo service was abolished in 1948.

Canadian Pacific Air Lines route operations in Canada cover a distance of 9,770 miles and Company aircraft flew a distance of nearly 5,000,000 miles. During the year ended Mar. 31, 1949, 145,891 passengers, 1,882,034 lb. of air mail, and 7,309,663 lb. of freight were carried.

*Canadian Pacific Air Lines, Trans-Pacific Service.*—In 1948 the Government of Canada assigned to Canadian Pacific Air Lines the licence to operate trans-Pacific air services between Canada and points in Australia, New Zealand and the Far East. As a result, development and organization work progressed and orders were placed for the construction of Canadair four-engined aircraft for use on these new routes.

The trans-Pacific air service between Vancouver and Australia and New Zealand was inaugurated by Canadian Pacific Air Lines in July, 1949. The service between Vancouver and the Orient via Alaska, Shemya, Tokyo, Shanghai and Hong Kong went into operation on Sept. 19, 1949. These trans-Pacific services add more than 15,000 miles of route to the Canadian Pacific Air Lines service.

**Independent Air Lines.**—Additional to Trans-Canada Air Lines and Canadian Pacific Air Lines, there are seven other domestic air lines licensed to operate scheduled services in Canada. These are:—

Central Northern Airways, Limited, Winnipeg.  
Leavens Bros. Air Services, Limited, Toronto.  
Maritime Central Airways, Limited, Charlottetown, P.E.I.  
Northern Airways, Limited, Carcross, Y.T.  
Quebec Airways, Limited, Montreal, Que.  
Queen Charlotte Airlines, Limited, Vancouver, B.C.  
Wheeler Air Lines, Limited, St. Jovite, Que.

Most of the independent air lines are operating non-scheduled services which, with few exceptions, are charter services from designated bases. It is in this field that the greatest development has taken place in recent years.

Non-scheduled charter services and non-scheduled specific point services provide effective means of access to sections of Canada that are inaccessible by other means of transportation and also act as feeders to the scheduled air lines.

As at Mar. 31, 1949, the following operating certificates were in effect: scheduled domestic, 35; scheduled foreign, 10; non-scheduled, 216; and flying training, 115.

**Commonwealth and Foreign Scheduled Services.**—Operating certificates issued to Commonwealth and foreign scheduled services flying into Canada number nine and consist of the following:—

- (1) American Airlines Incorporated, operating between Toronto, Ont., and Buffalo, N.Y., and also the Canadian portion of the route between Buffalo, N.Y., and Windsor, Ont., and Detroit, Mich. (two certificates);
- (2) British Commonwealth Pacific Airlines, between Vancouver, B.C., and Sydney, N.S.W., Australia; and between Vancouver, B.C., and Auckland, New Zealand via Fiji Islands, Canton Island, Honolulu, and San Francisco;
- (3) British Overseas Airways Corporation between Montreal, Que., and London, England;
- (4) Colonial Airlines Incorporated, operating between Montreal, Que., or Ottawa, Ont., and Washington, D.C., via Massena, Watertown, Syracuse, Scranton-Wilkes-Barre, Reading and Baltimore; between Montreal or Ottawa and New York, N.Y., via Massena, Plattsburg, Burlington, Saranac Lake-Lake Placid, Rutland, Glens Falls and Albany (two certificates);
- (5) Northeast Airlines Incorporated, between Boston, Mass., and Montreal, Que., via Burlington, Barre-Montpelier and Concord;
- (6) Northwest Airlines Incorporated, between Fargo, N.D., and Winnipeg, Man., via Grand Forks;
- (7) Pan-American Airways Incorporated, operating between Seattle, Wash., and Fairbanks, Alaska, with refuelling stop at Port Hardy, B.C., or Comox, B.C., and points of call at Juneau, Alaska, and Whitehorse, Yukon;
- (8) United Air Lines, Incorporated, operating between Vancouver, B.C., and Seattle, Wash., via Bellingham, Wash.;
- (9) Western Air Lines Incorporated, between Lethbridge, Alta., and Great Falls, Montana.

### Section 3.—Civil Aviation Statistics

**Aircraft.**—The Canadian aircraft industry on Mar. 31, 1949, consisted of the following companies making the civilian type of aircraft named:—

Canadair Limited, Montreal, Que., manufacturers of the Canadair *North Star*, *Canadair Four* and the converted *Canadair Dakotas*;

Canadian Car and Foundry Company, Limited, Montreal, Que., manufacturers of the *Norseman*;

DeHavilland Aircraft of Canada, Limited, Toronto, Ont., manufacturers of the *Beaver*, *Chipmunk* and *Canso*;

Fairey Aviation Company of Canada, Limited, Eastern Passage, N.S., conversion of trainer aircraft;

MacDonald Bros. Aircraft, Limited, Winnipeg, Man., overhaul and conversion work;

Northwest Industries, Limited, Edmonton, Alta., overhaul and conversion work;

A. V. Roe Canada, Limited, Toronto, Ont., engaged in the design and construction of a jet-powered transport for inter-city operations, the *AVRO Jelliner*;

British Aeroplane Engines, Limited, Vancouver, B.C., overhauling work;

Canadian Pratt and Whitney Aircraft Company, Limited, Longueuil, Que., overhaul and maintenance work;

Canadian Wright, Limited, Montreal, Que., overhaul and testing work.

The principal statistics of the aircraft industry are shown for the latest available year in the Manufactures Chapter, Table 11, p. 607.

**Ground Facilities.**—Early ground facilities for civil aviation consisted chiefly of municipal or flying-club airports adjacent to the larger urban centres and of numerous terminals from which commercial flying services operated, mainly into the northern mining regions. These airports formed the nucleus which, with many additions and improvements, became the chain of airports constituting the Trans-Canada airways operated by the Department of Transport. To-day, Canada is well supplied with airports and aerodromes scattered throughout the country. The Department of Transport retained a certain number of the airports that had been constructed for war purposes and others were made available to municipalities for local use. The airports, airfields and anchorages in Canada are classified as in Table 3. At the bottom of the table a statement appears showing the airports and airfields equipped with control facilities and certain other facilities, by provinces.

#### 3.—Airports, Airfields and Anchorages, by Provinces, as at Mar. 31, 1948

NOTE.—Department of Transport figures, unlicensed airfields and anchorages not included.

*Air Traffic Control.*—The system of air traffic control established in Canada operates in accordance with standard international procedures and practices. This system is designed to expedite the flow of air traffic, to eliminate delays and traffic confliction, and to provide separation between aircraft flying during weather conditions which necessitate the use of flight instruments.

Air traffic control centres are located at Moncton, N.B., Montreal, Que., Toronto, Ont., Winnipeg, Man., Edmonton, Alta. and Vancouver, B.C. At Moncton two such centres are in operation, one for the control of domestic traffic and the other for the control of north-west Atlantic oceanic air traffic. All these centres are linked by a network of longline telephone and teletype facilities and, in addition, each centre is similarly connected to all the airport traffic control towers, aeronautical radio stations, meteorological stations and air-carrier despatch offices which are located within its assigned control area. Airport traffic control towers are operated by the Department at Moncton, N.B., Montreal and Cartierville, Que., Windsor, London, Toronto, North Bay and Ottawa, Ont., Winnipeg, Man., Regina, Sask., Edmonton, Lethbridge and Calgary, Alta., and Patricia Bay and Vancouver, B.C. These units are responsible for controlling, by means of radio and light signals, the air traffic within a radius of five miles of the airport concerned and for the orderly movement of traffic on the airport.

**Summary Operation Statistics.**—The statistics given in Table 4 show the increase in recent years in passenger and freight traffic.

#### 4.—Summary Statistics of Civil Aviation, 1942-47

NOTE.—Figures for 1942 and subsequent years will be found in the corresponding tables of previous Year Books beginning with the 1924 edition.

<sup>1</sup> Exclusive of passengers carried between foreign stations.<sup>2</sup> Includes employees other than crews.<sup>3</sup> Exclusive of freight carried between foreign stations which is included in totals.

Canadian carriers only.

<sup>4</sup> For

Table 5 shows summary figures for 1947 by type of carrier. For a definition of scheduled and non-scheduled carriers, see p. 790. Statistics for international carriers include traffic over Canadian territory for both Canadian and foreign operators; a small traffic across Canadian territory and between foreign stations is also

included. Statistics for Canadian carriers operating international routes are included both as "International" and "Canadian" but duplications are excluded from the totals.

<sup>1</sup> Excludes traffic interchanged between carriers.

<sup>2</sup> Purchased in-Canada.

**Finances.**—The investment of the Department of Transport in airways and airports and in the Canadian Government transatlantic air service is given in Table 6, and the operation and maintenance expenditures and revenues for 1946-48 in Table 7. In addition to the direct expenditures shown, the Department has given assistance to municipalities for the construction and development of airports amounting to \$3,732,310, up to Mar. 31, 1949.

### 6.—Capital Investment of the Department of Transport in Civil Aviation Facilities, Years Ended Mar. 31, 1946-48

## PART VI.—WIRE COMMUNICATIONS\*

## Section 1.—Telegraphs

The early history of telegraphic communication in Canada is given at p. 778 of the 1934-35 Year Book.

**Federal Government Telegraph and Telephone Service.**†—The function of the Telegraph and Telephone Branch of the Department of Transport is to furnish wire communications for outlying and sparsely settled districts where commercial companies do not enter into the field and where the population must receive adequate communication services in the public interest. These services include: telegraph and telephone services to scattered settlements along the coast of Cape Breton Island; cable services to Campobello, Grand Manan and other islands in the Bay of Fundy, to Prince Edward Island and a number of small islands in the Gulf of St. Lawrence; cable connections with Pelee and Manitoulin Islands in Ontario as well as telephone lines on the latter; some lines to northern outlying districts in Saskatchewan; telegraph lines from Edmonton to the Athabaska and Peace River country in Alberta in addition to an extensive telephone system in the latter area; telegraph and telephone communications around the coast of Vancouver Island and adjacent islands; service to fishing, lumber and mining centres in the interior; and an over-land telegraph and telephone line serving communities from Ashcroft, B.C., to Dawson, Yukon.

**Telegraph Systems.**—The Canadian telegraph systems are composed of lines owned by the Federal Government and by chartered railway and telegraph companies. The Canadian facilities, in proportion to population, are among the most extensive in the world, and are operated under great climatic and geographical difficulties.

\* Revised in the Transportation Division, Dominion Bureau of Statistics. This Division issues annual reports dealing with telegraph and telephone statistics.

† Revised by G. C. W. Browne, Director of Radio, Radio Division, Department of Transport.

## 1.—Summary Statistics of Canadian Telegraphs, 1939-48

NOTE.—Figures for 1920-38 will be found in the corresponding table of previous Year Books beginning with the 1938 edition.

<sup>1</sup> Excludes commission operators.

<sup>2</sup> Includes messages to and from vessels on the Great Lakes and the St. Lawrence River, and messages to and from stations.

<sup>3</sup> Excludes messages relayed and includes paid wireless messages to and from ships in the Gulf of St. Lawrence and Atlantic Ocean.

**Submarine Cables.**—Four cable companies operate in Canada: the Commercial Cable Company; the Pacific Cable Board; Halifax and Bermudas Cable Company; and the Western Union Telegraph Company. These companies operate to stations in Newfoundland, the United States, Bermuda, England, Australia, New Zealand, etc. The number of cables operating between connected stations and the length of cables will be found at p. 758 of the 1948-49 Year Book.

## Section 2.—Telephones

A brief historical account of the early development of telephones in Canada is given at p. 781 of the 1934-35 Year Book.

**Telephone Systems.**—The 3,056 telephone systems existing in 1947 included the three large provincial systems in Manitoba, Saskatchewan and Alberta, and smaller governmental systems in Ontario, Quebec and New Brunswick, together with the system operated by the Federal Department of Public Works and the National Parks of Canada, Department of Mines and Resources. They also included 23 municipal systems, the largest operated by the cities of Edmonton, Fort William and Port Arthur. Of the 2,318 co-operative telephone companies no fewer than 1,077 were in Saskatchewan. There were 783 in Alberta and 216 in Nova Scotia. The largest among the 501 stock companies operating telephone systems in 1947 were the Bell Telephone Company and the British Columbia Telephone Company. Over 62 p.c. of the total telephone investment in Canada belongs to the Bell Telephone Company, and their telephones in Quebec and Ontario constitute 58 p.c. of the total for Canada.

**Telephone Equipment.**—During the years 1938-47 there was an increase of 871,180 in the number of telephones in use, representing an advance of 46 p.c. in telephones per 100 population.

Of the 2,230,597 telephones in Canada in 1947, 1,255,645 or 56 p.c. were operated from automatic switchboards. The remainder were operated from manual switchboards. Automatic switchboards have completely displaced manual switchboards in the principal cities of the Prairie Provinces and are displacing them in the other provinces as equipment becomes available.

## 2.—Mileages of Pole Line and Wire, and Telephones in Use, 1938-47

NOTE.—Figures for 1911-37 will be found in the corresponding tables of previous Year Books beginning with the 1938 Year Book.

Year	Sys- tems	Pole-Line Mileage	Mileage of Wire	Telephones in Use					
				Business	Resi- dential	Rural <sup>1</sup>	Public Pay	Total	Per 100 Popu- lation

<sup>1</sup> Includes telephones on rural exchange lines and urban exchange lines that have more than four parties.

The density of telephones in the different provinces is naturally influenced by the urbanization of the population because the number of telephones used for business purposes is much greater in cities and towns than in rural areas.

<sup>1</sup> Includes wages charged to expenses and to capital.

<sup>2</sup> Statistics of Bell Telephone Company in Quebec and Ontario are included in Quebec.

<sup>3</sup> Excludes employees and wages for rural systems.

**Telephone Calls.**—Table 6 is based on estimates made by systems operating almost 90 p.c. of all telephones in Canada. Actual count of calls on days of normal business was made and, after adjustment for incompleting calls, holidays, Sundays, etc., the average was multiplied by 365. The long-distance calls, in practically all cases, were the actual long-distance calls put through or completed.

## 6.—Local and Long-Distance Calls and Averages per Telephone and per Capita, 1938-47

NOTE.—Figures for 1928-35 will be found at p. 718 of the 1939 Year Book and those for 1936-37 at p. 761 of the 1948-49 edition.

Year	Local Calls	Long-Distance Calls	Total Calls	Total Calls per Capita <sup>1</sup>	Averages per Telephone

<sup>1</sup> Per capita figures are based on official estimates of population given at p. 155.

## PART VII.—RADIO-COMMUNICATIONS\*

The Canada Year Book, 1945, at pp. 644-646, gives an outline of the development of administrative control over radio-communication in Canada.

### Section 1.—Administration

The administration and regulation of radio-communication in Canada is carried out by the Radio Division of the Department of Transport. To a very large extent the regulation of radio is made necessary by the great distances over which most radio waves are propagated, and the impossibility of confining them within national boundaries. Mobile stations, such as ships and aircraft, may move about in all parts of the world, and may create interference to radio services of other countries. For these reasons the regulation of radio-communication has been the subject of extensive international agreements. The extreme congestion of long-distance communication frequencies, and the uses of radio in connection with the safety of human life, make necessary both domestic and international regulation to ensure the most efficient utilization of the available frequencies.

The principal international radio agreements, and Canadian radio legislation can be grouped as follows:—

- (1) The International Telecommunication Convention and Regulations annexed thereto. The International obligations arising from this treaty are incorporated into The Radio Act, of 1938, which also contains radio regulations of a purely domestic nature.
- (2) The International Convention for the Safety of Life at Sea, the obligations of which are enforced through the Canada Shipping Act, which also includes additional domestic requirements. These instruments also cover ship construction and other aspects of marine safety, which are administered by other Divisions of the Department of Transport.
- (3) The North American Regional Broadcasting Agreement, and The Canadian Broadcasting Act, 1936.

**International and Commonwealth Conferences.**—During the year ended Mar. 31, 1949, a large number of international telecommunication conferences took place. A number of these arose from the decision made at the Atlantic City Conferences in 1947 to undertake the international reorganization of the high frequency radio frequency assignments of the world, in an effort to reduce congestion and interference in these bands.

The Provisional Frequency Board, which is charged with the task of engineering that part of the new Frequency List relating to fixed and maritime mobile services, began its work at Geneva, Switzerland, in January, 1948, and continued beyond Mar. 31, 1949. The importance of the matters involved necessitated representation throughout the course of the work by an officer of the Radio Division of the Department of Transport acting as the Canadian member on the Board, assisted by representatives of the Armed Forces as technical advisers.

In April, 1948, the International Administrative Aeronautical Radio Conference began work at Geneva on those bands in the new Frequency List set aside for communications between aircraft and aeronautical ground stations. This Conference, which recessed in September, produced a draft plan to be considered at subsequent Regional Conferences, and to be completed at a re-convening of the main conference in the latter part of 1949.

\* Sections 1 and 2 of this Part have been revised by the Department of Transport.

In January, 1949, the Northeast Atlantic "Loran" Conference was held at Geneva, and lasted about one month. A number of European countries have experienced a considerable amount of interference to other radio services from the Loran stations, but nevertheless agreement was obtained for the continued operation on its present frequencies of this most important aid to air and marine navigation in the Atlantic.

Canada is one of the 18 countries which have members on the Administrative Council of the International Telecommunication Union. The Council, which meets annually to direct the administrative affairs of the Union, met at Geneva throughout September, 1948.

The fifth meeting of the International Radio Consultative Committee (C.C.I.R.) held at Stockholm during the latter part of July and early August, was attended by the Canadian member of the Provisional Frequency Board.

The International High Frequency Broadcasting Conference began at Mexico City in October, 1948, and continued until after the end of the fiscal year (Mar. 31, 1949). This Conference was charged with the task of preparing that portion of the new frequency list in the bands set aside for high frequency (short wave) broadcasting.

During the first three weeks of June, 1948, a meeting of the Commonwealth Communications Council was held at London, England, and further progress was made in the negotiations on the division of the common user costs of the Commonwealth telecommunications system and other related problems.

Under the Atlantic City revision of the International Telecommunication Convention no provision was made for members being signatory to some of but not all the sets of Regulations annexed to the Convention. As Canada, the United States, and certain other countries, had never been signatories to the Telegraph and Telephone Regulations, it was the intention of the Atlantic City Conference that these Regulations should be revised or rearranged, possibly with certain parts being applicable only in certain regions, so that all member states of the Union would be able to sign them. In this connection, a meeting of the International Consultative Committee (C.C.I.T.) was held at Brussels from May 10 to 21, and subsequently a meeting at Geneva in January and February, 1949. This latter was a Preparatory Committee, composed of eight countries, to study the problems that would arise at the International Telephone and Telegraph Conference to be held in May, 1949, in connection with the revision of the Regulations, so that they could be signed by all countries.

The Safety of Life at Sea Conference was held in April and June, 1949, at London, England. This Conference revised and brought up to date the International Convention for the Safety of Life at Sea (1929), which lays down minimum safety requirements for international shipping, in respect to the carriage of radio equipment, as well as other safety appliances and constructional characteristics of vessels. In the 20 years the preceding Convention was in force important advances had been made in radio equipment, and the new Convention provides for these, including the use of radiotelephone on smaller ships, life-boat radio equipment, and wider use of radio direction finders.

During the year 1948-49 two International Civil Aviation Organization meetings were held. The first of these was the North Pacific Regional Meeting, held at Seattle, U.S.A., during the month of July, and was of particular interest in view

of plans for a Canadian airline to fly across the Pacific. The regular meeting of the ICAO Communications Division held at Montreal, Que., Jan. 10 to Feb. 26, 1949, reviewed the existing Communications Standards and Recommended Practices and, in addition, considered certain aspects of the Draft Frequency List prepared by the Aeronautical Administrative Conference at Geneva during the previous summer, which is to be revised at Regional Conferences.

**Technical Control and Licensing of Broadcasting Stations.**—Under The Broadcasting Act of 1936, applications for licences to establish broadcasting stations, or for modification of existing stations, are referred to the Canadian Broadcasting Corporation for its recommendations to the Minister, before being dealt with by the Department of Transport. As the licensing authority the Canadian Broadcasting Corporation also controls the linking up of stations to form networks, and in addition, the character of programs being broadcast. With these exceptions, the control of broadcasting stations is carried out by the Radio Division of the Department of Transport in the same way as in the case of other types of radiocommunication stations. The standard broadcast band is crowded with stations which, particularly at night, are capable of interfering with each other over the entire North American region. To utilize the band most effectively, and to reduce interference as much as possible, Cuba, the Dominican Republic, Haiti, the Bahama Islands, Newfoundland, Mexico, the United States and Canada made extensive engineering studies of how to accommodate the largest number of stations with the least interference. The resulting plan is embodied in the North American Regional Broadcasting Agreement. Before an additional new standard broadcasting station can be licensed a professional consulting radio engineer recognized by the Department must make a study of the matter, to select the frequency, the amount of power, and commonly a directional antenna system, and, by calculation, establish that interference to existing stations is within the requirements of the North American Regional Broadcasting Agreement. This engineering brief is checked by the Radio Division and, if necessary, modifications are made. After a new station is completed measurements must be made, and a proof of performance submitted to establish that the actual installation is in accord with the approved plan.

Another important measure to reduce interference is to ensure that each station is maintained exactly on the frequency assigned to it: this reduces considerably the amount of heterodyning, which causes interference in the form of a whistling note. The five frequency measuring stations maintained by the Radio Division make frequent measurements of the frequency of broadcasting and other stations, and ensure that all stations maintain their frequency within the narrow limits required.

The classes of radio stations listed in Table 1 are numerous and complicated by virtue of the fact that many perform closely related functions. There were at the end of the fiscal year Mar. 31, 1949, 2,057,799 radio stations operating in Canada; of these, 356 were Department of Transport stations. The summary of licensed services given on pp. 809 to 811 groups together licensed radio stations performing important related services.

## 1.—Radio Stations in Operation by Class, as at Mar. 31, 1949

Department of Transport Stations		Other Stations	
	No.		No.
Coast.....	2	Ship (Class A).....	1,856

<sup>1</sup> Station location ("Z") markers are installed at 90 Radio Range Stations. <sup>2</sup> Two stations, at Port Harrison, Que., and Coppermine, N.W.T., perform restricted coast station service during the season of navigation but since their primary function is that of a weather reporting station, they are shown under this heading only. <sup>3</sup> Includes 19 repeater stations.

**Control and Licensing of Marine and Aeronautical Radio.**—Under the Safety of Life at Sea Convention, and the Canada Shipping Act, most passenger ships and larger cargo ships must be fitted with radiotelegraph equipment, primarily for use in cases of distress. This requirement includes certain standards that equipment must meet to fulfil the purposes for which it is fitted, as well as standards of proficiency of operating personnel. Type approval is given for each make and model of equipment which comes up to the required standard and, in addition, the ship station as a whole is inspected before the licence is issued, and periodically thereafter. Foreign ships are subject to inspection before sailing from Canadian ports to ensure that they conform with the requirements of the Safety of Life at Sea Convention. Approximately 3,000 ships are inspected annually.

Analogous inspections of aircraft radio stations are carried out and about 298 aircraft radio stations were inspected in 1948.

Standards are provided specifying in detail the requirements to be met to ensure an airworthy installation. These requirements are contained in Radio Division Circular C.R. 1, copies of which can be obtained from any Departmental Radio Inspector.

A 'Type Certificate' of airworthiness is granted to manufacturers for each type (model) aircraft radio equipment that has been demonstrated to meet the requirements. These requirements are contained in Circular C.R. 2, "Requirements for Type Certificate of Airworthiness for Aircraft Radio Equipment". Only type-certificated equipment is accepted for use on scheduled airlines and, while other equipment may be acceptable in other aircraft upon inspection at the time of installation, the purchaser of type-certificated equipment is assured that it will

meet all requirements. Each piece of type-certificated equipment is accompanied by an inspection release certificate, certifying that the equipment is in good order, and conforms to the approved type.

**Technical Control of Licensing — General.** — In all branches of radio, basic control is exercised over the following principal matters: the right to establish a station, assignment of frequencies, operator standards, operating procedure, and general regulations concerning the manner in which radio stations are used.

The efficient utilization, as well as the allocation of high frequencies requires reasonably accurate information on the transmission properties of the ionosphere, that vary with the season, the sunspot cycle and other factors. This information is obtained from daily measurements of the ionosphere made at about 50 points throughout the world. These data are combined, analyzed, and forecasts produced for the coming months. While aspects of special interest to Canada are treated by the Canadian Radio Wave Propagation Committee, the general frequency forecasts made by the United States Central Radio Propagation Laboratories are available to Canada. They are based on world-wide data, including those obtained from the five ionosphere measurement stations operated by the Radio Division at Clyde River, Baffin Island; St. John's, Nfld.; Resolute Bay, Cornwallis Island; Baker Lake, N.W.T. and Fort Chimo, Que.

Operator standards and related regulations are principally covered by international agreement, and arise partly from the uses of radio in connection with the safety of life, and also in the interests of reducing interference and making the most effective use of the radio spectrum.

In addition, operators of radio equipment are examined for certificates of proficiency in radio in accordance with the General Radiocommunications Regulations (Revision of Cairo, 1938).

The most important services call for operators holding first, second or other prescribed class of certificate of proficiency. Qualified operators are particularly essential in the case of ships and aircraft stations in the interests of safety of life. Operators for services of lesser importance, or services not likely to become a source of interference, are required to satisfy the Department of Transport that they are fully qualified to operate and maintain the equipment upon which they are employed.

At Mar. 31, 1949, the total number of certificates issued was 17,439, not all of which were still valid. In the commercial classes, certificates must be brought up to date from time to time by exchange or by re-examination, and in a number of cases operators allowed their certificates to lapse.

**Summary of Principal Licensed Services.**—*Commercial Trans-Oceanic Radiotelegraph and Radiotelephone Service.*—The Canadian Marconi Company is licensed to operate a long distance beam radiotelegraph service from its Montreal (Drummondville) Que., station to Great Britain, Australia, Bermuda and Jamaica, and a radiotelephone service from Montreal to Great Britain.

*Canada-Newfoundland Radiotelephone Service.*—The Canadian Marconi Company is licensed to operate a public commercial station with the transmitter at Drummondville and receiver at Yamachiche, Que., for the purpose of communicating with a similar station located at St. John's, Nfld., thus providing a direct radiotelephone circuit between Newfoundland and the mainland.

*Commercial Point-to-Point Radiotelephone Services.*—The North-West Telephone Company operates a radiotelephone service between points in British Columbia, not hitherto served by telephone communications. Such stations, used in conjunction with the ordinary telephone exchange, provide a duplex radiotelephone service to 182 isolated points and certain ships at sea.

*The Quebec Telephone and Power Company.*—On the south shore of the St. Lawrence, this Company operates a radiotelephone station at Rimouski, Que., which links up with the Bell Telephone Company at that place and with a radiotelephone station at Baie Comeau, Que.; telephone service from that area is provided to any part of Canada.

*Canadian Pacific Air Lines Limited.*—This organization operates a public commercial radiotelephone service consisting of public commercial radiotelephone stations located at Sioux Lookout, Pickle Lake, Red Lake and Kenora, Ont., which are used in conjunction with the ordinary telephone exchanges to provide telephonic communication to privately owned stations located at isolated points throughout the northwestern part of Ontario.

*Provincial Government Services.*—Provincial authorities use radio in forestry work and operate stations as follows: Nova Scotia 5; New Brunswick 4; Quebec 61; Ontario 250 (including 35 aircraft stations); Manitoba 36 (including 7 aircraft stations); Saskatchewan 139 (including 18 aircraft stations); Alberta 268; British Columbia 349 (including 17 patrol vessels, 2 Game Commission vessels and 1 Game Commission fixed station). The British Columbia Department of Public Works operates 4 private commercial stations including 1 aircraft station. The Alberta Department of Public Works has 12 stations (including 2 aircraft stations) and the Alberta Department of Railways and Telephones operates 6 stations. The Nova Scotia Department of Highways and Public Works operates 2 stations. The Saskatchewan Department of Public Health operates 15 aircraft stations. The Quebec Department of Mines operates 2 stations and the Quebec Streams Commission operates 1 station.

*Police Radio Services.*—The Royal Canadian Mounted Police operate 38 radio stations at fixed points, 91 mobile stations, 32 portable stations, 7 aircraft stations and 295 commercial receiving stations throughout Canada. The British Columbia Provincial Police operate 33 fixed stations, 47 mobile stations, 7 portable stations, 8 commercial receiving stations and 7 ship stations; the Ontario Provincial Police 43 fixed stations and 302 mobile stations; the Quebec Provincial Police 11 fixed stations and 17 mobile stations. All of these are used to provide liaison between the various units of the Force concerned.

Municipal police radio stations have also been licensed for the purpose of providing communication between various Provincial Police Headquarters and police radio-equipped automobiles in 112 municipalities throughout Canada.

*Communication with Isolated Points.*—Radiotelegraphy and radiotelephony are used throughout Canada to provide the means for maintaining contact with isolated points beyond the reach of the regular telegraph and telephone facilities.

*Public Utilities, Power and Other Companies.*—Radio is used by these bodies to provide emergency telegraph and telephone communication between their power plants and distribution centres, and 561 licences for such stations were issued during 1948, including 120 receiving stations in patrol cars.

Licences were also issued to mining companies throughout Canada to cover the operation of 165 radio stations and 37 aircraft radio stations.

Other companies operating aircraft were licensed for 200 ground radio stations and 682 aircraft radio stations (including 30 receiving stations installed in aircraft).

## Section 2.—Federal Government Radio Operations

**Operating Statistics.**—The International Telecommunication Convention and Regulations contain the international agreements concerning the rendering and settlement of international telecommunication accounts. The records for Canada are kept by the Radio Division of the Department of Transport.

### 2.—Messages Handled (including retransmissions), and Revenue Collected by the Department of Transport, as at Mar. 31, 1949

<sup>1</sup> Includes licences issued free, numbering 7,896 in 1944, 8,375 in 1945, 8,435 in 1946, 10,673 in 1947, 10,676 in 1948 and 12,782 in 1949. See Table 1 for classification for 1949.

**Investigation and Suppression of Inductive Interference.**—Under the Broadcasting Act the use of electrical equipment which will produce harmful interference to broadcast reception is not permitted. The Radio Division of the Department of Transport maintains 42 cars which are equipped for measuring and locating sources of interference to broadcast reception. In addition to locating the sources of interference, advice is given as to how it can best be suppressed or eliminated. These cars operate from the permanent Radio Inspection Offices located in 23 cities throughout Canada.

**4.—Investigations of Inductive Interference, Years Ended Mar. 31, 1946-49**

Item	1946	1947	1948	1949

Sources having no economic cure.....	84	140	248	95

Industrial, scientific and medical apparatus is brought under strict control, according to Regulations for Controlling Radio Interference and the authority of Section 23 of the Canadian Broadcasting Act, 1936. These regulations require that radiation from such apparatus, which is liable to cause interference to radio-communications, must be suppressed, either by shielding or by replacing the apparatus with a non-interfering type. The Department of Transport conducts type-tests on diathermy and industrial heating apparatus submitted by manufacturers, and those types that fulfil the requirements of the Department, are listed as non-interfering. The radiation from all such sources on communication frequencies must not exceed the tolerances specified by the Canadian Standards Association.

### Marine Radio Stations\*

**Marine.**—Four distinct networks of stations provide a complete radio aids-to-navigation service for ships. These networks serve the following areas: Great Lakes; Gulf of St. Lawrence and Atlantic coast; Hudson Bay and Strait, and Sub-Arctic; and Pacific coast. The first three networks are interlocking. The Department of Transport maintains communication between Ottawa and the east and west coasts, and Hudson Bay and Strait by means of high-frequency stations.

During the fiscal year 1948-49, Federal Government radiotelegraph stations on the east coast, west coast, the Great Lakes, and Hudson Bay and Strait handled 731,986 messages or 23,610,759 words.

**Radio Coast Stations.**—The primary purpose of the coast-station organization is to provide radiocommunication facilities whereby any ship within 500 miles of the Canadian coast may establish communication with shore.

On the east coast and the Hudson Bay and Strait there are 16 stations. There are seven on the Great Lakes and seven more on the west coast. All these broadcast information to navigators twice daily at advertised hours. Urgent information, such as hurricane warnings, is broadcast immediately upon receipt.

The Vancouver Coast Station (VAI) maintains long range radiocommunication with ships of any nationality at sea. Halifax (CFH) and Vancouver (CKN) Coast Stations participate in the Commonwealth scheme for providing similar radiocommunication services with ships, and are operated jointly by the Department of Transport and the Royal Canadian Navy.

**Radio Direction Finding Service.**—There are 13 marine radio direction finding stations in operation—seven on the east coast, five on the Hudson Bay and Strait, and one on the Pacific coast. These direction finding stations have an enviable reputation for efficiency and accuracy. During 1948-49, 16,972 bearings were given without charge to ships and aircraft.

**Radiobeacon Service.**—Radiobeacons are established for the purpose of enabling any ship or aircraft equipped with a direction finder to determine its bearing or direction in relation to the radiobeacon station. There are 46 radiobeacons in operation—23 on the east coast, 16 on the Great Lakes and 7 on the Pacific coast.

In clear weather each station, at advertised hours, transmits its characteristic for three periods of one minute separated by silent intervals of two minutes. In foggy weather all stations operate continuously, maintaining a uniform time cycle of three minutes, each station transmitting in its proper sequence for one minute separated by silent intervals of two minutes.

At Flat Point, N.S., Partridge Island, N.B., Red Islet, Que., Caribou Island, Gros Cap Lightship, Hope Island, Main Duck, Southeast Shoal, Cove Island, Michipicoten Harbour, Long Point, Ont., and Point Atkinson, B.C., the radiobeacon signals are synchronized with the emissions of the fog alarms at those points for distance finding during foggy weather.

Ships equipped with direction finding apparatus may, upon request, obtain signals for the purpose of taking bearings from any of the coast stations. During 1948-49, 282 such requests for signals were handled.

\* Detailed information covering all marine radio aids to navigation is contained in the annual publication "Radio Aids to Marine Navigation". Copies of this publication may be obtained, upon request, from the Department of Transport without charge, also any supplementary "Notices to Mariners" issued in connection therewith during the year.

"Loran" (long range aid to navigation) is a system of position finding based on the difference in the time of arrival of pulse type radio signals transmitted from a pair of stations. This time difference is measured on a Loran receiver and is used in conjunction with specially prepared charts or tables to establish a line of position. The intersection of two or more lines of position determined from two or more pairs of stations provides the required position.

There are three standard Loran stations in Canada, at Deming and Baccaro, N.S., and Spring Island, B.C., which operate in conjunction with Port aux Basques, Nfld., Siasconset, U.S.A. and Point Grenville, U.S.A., respectively.

**East Coast Visual Signal Service.**—The chief function of the visual signal stations on the east coast, located at strategic points, is to report the movements of vessels not equipped with radio. All radio coast stations report ships with which communication has been established, and this information is supplemented by reports of ships sighted by the visual signal stations which are organized to link up with the east coast radio service.

There are five visual signal stations on the east coast located at Point Tupper, Halifax, Camperdown, Saint John, and Partridge Island. In addition, the Lucher Lightship reports by radio to the nearest coast station all ships spoken and sighted.

**Time Signals.**—The Dominion Observatory of the Department of Mines and Resources at Ottawa operates a continuous time signal transmission over its radio station CHU on the frequencies of 3330, 7335 and 14,670 kc/s. The signals are transmitted continuously day and night and are of value to survey parties and prospectors in providing facilities for determining their exact geographical positions.

During 1949 three transmitters were purchased by the Dominion Observatory and installed at the Ottawa short-wave transmitting station where they are maintained and operated by Radio Division personnel of the Department of Transport.

Time signals are relayed from the Dominion Observatory to Halifax, N.S., and Port Churchill, Man. The signals are transmitted by Halifax (Albro Lake) Coast Station (CFH) daily at 0300 G.M.T. simultaneously on 115 and 5502.5 kc/s and at 1500 G.M.T. simultaneously on 115 and 9040 kc/s; and by Port Churchill Coast Station (VAP) daily at 1500 G.M.T. on 500 kc/s.

Time signals are also relayed from the Saint John, N.B. Observatory to Camperdown Coast Station (VCS) and are transmitted by that station daily, except Sunday, at 1400 G.M.T. on 417 kc/s.

**Radar.**—A considerable number of merchant ships are now fitted with radar which, besides being a safety measure, reduces the operating costs of the ships by allowing them to proceed under conditions of low visibility. Experimental reflectors fitted on buoys along the east coast enable ships to detect the buoys on their radar at a much greater range.

The Department of Transport is co-operating with the National Research Council in the development of a shore-based radar aid to shipping for use at harbour entrances. The experimental installation at Camperdown D.F. Station, at the entrance to Halifax harbour is producing very encouraging results, and an additional installation has been provided for the Lion's Gate Bridge, Vancouver. This latter installation also shows promise of being a useful navigational aid for the entrance to Vancouver harbour.

**Medical Advice to Ships at Sea.**—Ships at sea may obtain medical advice through any of the Department's coast stations. Messages from ships in this connection are forwarded to the nearest medical officer of the Department of National Health and Welfare and his reply is transmitted to the ship.

**Radio Assistance rendered to Vessels in Emergency.**—Federal Government radio stations rendered assistance to 109 ships and aircraft reported in danger or distress during the year ended Mar. 31, 1949.

**Marine Casualty Reporting Stations.**—To assist in promoting the safety of life at sea, seven marine casualty reporting stations on the Atlantic coast and ten on the Pacific coast, are fitted with radiotelephony.

### **Radiocommunication Stations and Aids to Air Navigation**

Radio aids to air navigation are provided from coast to coast along the airways used by the many Canadian airlines, United States airlines flying over Canadian territory, and many Canadian and United States military aircraft. In order to construct and maintain these many facilities, trained engineers and technicians are located at six district offices: Moncton, Montreal, Toronto, Winnipeg, Edmonton and Vancouver.

**Radio Ranges.**—The principal aid to air navigation is the radio range. These stations are located approximately 100 miles apart and provide radio beams which guide aircraft in flight. In addition to being kept on course, pilots can be informed by radio telephone from the ground station of weather conditions and other matters of interest to the pilot. There are now 92 such stations in operation from Vancouver Island to Newfoundland.

During the year ended Mar. 31, 1949, two new radio ranges were built and commissioned at Sandspit, B.C. and Graham, Ont., and the operation of one at Mecatina, Que., was taken over by the Department of Transport. The ranges at Patricia Bay, Sandspit and Pennfield Ridge were converted to simultaneous operation, making a total of 52 so equipped. This feature enables voice communication between the ground station and the pilot without shutting off the beams. The Cranbrook Radio Range was closed down at midnight on Mar. 31 as it was considered that the Kimberley Range nearby would serve the airway adequately.

**Fan Markers.**—Fan-marker equipment is installed at various points along the airway to identify to pilots a particular spot on the ground. For instance, the Maple Ridge fan marker, 30 miles east of the Vancouver airport, informs the pilot on a west-bound flight when he may safely lose altitude without risk of striking mountain tops. The only additional facility of this type undertaken was preparatory construction work for an installation at Campbell Cross, Ont.

**Station Location Markers.**—Each radio range station is provided with a station location marker. The purpose of this equipment is to inform a pilot flying overhead when he is directly above the station. This is accomplished by directing energy vertically from the ground in the form of an inverted cone that is received in the aircraft and causes a light on the instrument panel to be turned on. The following range stations had this equipment added during the year: Nakina, Ont., Earleton Junction, Ont., Muskoka, Ont., Porquis Junction, Ont., Pagwa, Ont., Rivers, Man., Swift Current, Sask., Broadview, Sask., Penhold, Alta., Medicine Hat, Alta., Sandspit, B.C., Kimberley, B.C., and Yellowknife, N.W.T.: this brings the total up to 90. Only two ranges have yet to be equipped, those at Killaloe, Ont., and at Mecatina, Que.

**Instrument Landing Systems.**—Instrument landing equipment provides radio beams, by means of which pilots are able to land aircraft during periods of very low visibility. The equipment consists of a localizer that provides a beam along the centre of the runway, a glide path transmitter which provides an inclined beam which meets the runway at the approach end, and three markers at four miles, 3,500 ft. and 200 ft. from the approach end of the runway that indicate to the pilot by means of lights on his instrument panel the exact distance he is from the runway.

**VHF Program.**—Due to the overcrowded condition of the high-frequency band and the fact that communication in the very-high-frequency spectrum is relatively free from static interference, progress is rapidly being made in providing communication between the ground and aircraft on the latter frequencies. The greatest drawback to the very-high-frequency spectrum is that communication is restricted to line of sight, thus making necessary more closely spaced installations than are required in the high-frequency band.

**Meteorological Communications Stations.**—Weather reporting stations are distributed at strategic points throughout the uninhabited areas of the country as well as throughout the populated areas. Reports from these stations enable the weather forecasters to make more accurate forecasts of great importance to both domestic and transatlantic flying operations. The only change in this regard during 1948-49 was the closing of the Sandgirt Lake station located in the far northern Quebec area. Reports required from this area are now being supplied by the staff of a mining company located at Knob Lake.

The four meteorological radio stations located at Fort MacKenzie, Que., Nitchequon, Que., Dore Lake, Que. and Dease Lake, B.C. were maintained and operated throughout the year. The purpose of these stations is to forward to the meteorological office the weather observations taken at the above points. The Meteorological Stations at Port Harrison, Que., and Coppermine, N.W.T., perform similar functions and, in addition, provide restricted coast station service during the season of navigation.

**Ionosphere Measurement Stations.**—The purpose of ionosphere measurements is to determine virtual height of the ionized layer in the earth's upper atmosphere and to determine the amount of absorption which radio waves experience in passing through and in being reflected by this layer. The information gained is of great importance in predicting short-wave communication coverage and for determining the reliability and deviation of bearings from short-wave direction finders. There are 65 ionosphere measurement stations located in different parts of the world. Three new ionosphere measurement stations at Resolute Bay, Baker Lake, N.W.T. and Fort Chimo, Que., were established and placed in operation during 1948-49. In addition, stations are maintained at Clyde River, Baffin Island; and at St. John's, Nfld.

### Other Federal Government Radio Stations

**Department of National Defence.**—In addition to stations established for military purposes, Militia Services (Royal Canadian Corps of Signals) operates 11 permanent stations and two summer stations situated along the Mackenzie River and in Yukon on behalf of the Department of Mines and Resources; Bureau of Northwest Territories and Yukon Affairs.

**Department of Public Works.**—A total of 32 stations, 12 to provide emergency communication between the mainland and certain islands, 18 to provide emergency links in existing landline circuits, and two for departmental communication are operated by the Department of Public Works.

**Department of Mines and Resources.**—The Department of Mines and Resources operates, under the Surveys and Engineering Branch, one fixed station, nine portable stations, one experimental station and one commercial receiving station; National Parks Bureau, nine fixed stations, 16 portable stations and two experimental stations; Mines and Geology Branch, one fixed station and one commercial receiving station; Bureau of Northwest Territories and Yukon Affairs, two fixed stations and 28 portable stations. These stations are used to provide communication and time signal service for survey parties and the protection and administration of National Parks.

**Department of National Revenue.**—The Department of National Revenue operates two private commercial stations.

### Section 3.—The Canadian Broadcasting Corporation\*

The history and development of the Canadian Broadcasting Corporation is given at pp. 737-740 of the 1947 Year Book.

The Canadian Broadcasting Corporation operates under authority of the Canadian Broadcasting Act, 1936, and is headed by a Board of nine Governors, chosen to give representation to the principal geographic divisions of Canada, and a full-time Chairman. The Board determines and supervises policy, but day-to-day operations and executive direction are the responsibility of the General Manager. The organization of the CBC consists of the following Divisions: Executive, Personnel and Administration, Finance, Engineering, Program, Press and Information, Commercial, Broadcast Regulations, and Station Relations.

Under the Canadian Broadcasting Act, 1936, the CBC is responsible for regulations controlling the establishment and operation of networks, the character of any and all programs broadcast over its own and privately owned stations and the proportion of time that may be devoted to advertising in broadcast programs. The CBC neither exercises, nor authorizes any private station to exercise on its behalf, censorship of any broadcast program. The responsibility of seeing that the regulations are observed rests with the individual station management.

**Frequency Modulation.**—The development of frequency modulation is given at p. 773 of the 1948-49 Year Book. On Apr. 1, 1949, there were five CBC and 20 privately owned frequency modulation stations in operation, with as many more in the process of construction.

**Television.**—In April, 1949, the Government of Canada adopted an interim plan for the development of television in Canada that, in accordance with the Canadian Broadcasting Act, 1936, entrusted the general direction of television

\* Revised by Donald Manson, Assistant General Manager, Canadian Broadcasting Corporation, Ottawa.

broadcasting in Canada to the CBC Board of Governors who are to arrange for television operations by the Canadian Broadcasting Corporation and by licensed private stations.

As a beginning the plan calls for the establishment by the Corporation of national television production centres at Montreal and Toronto and transmitting stations at these points and the provision of a service of television programs for broadcasting stations, that may be established in other areas of Canada, either by means of kinescope recordings or by direct physical relays when available.

The Government made it clear that the development of a Canadian television system on this interim basis should be undertaken during the period that the recently appointed Royal Commission on National Development in the Arts, Letters and Sciences conducted an inquiry into television.

The CBC has studied television intensively for the past two years and is now engaged in the necessary planning and organization. Projected plans (as in November, 1949) call for the establishment of program centres at Montreal and Toronto.

**Broadcasting Facilities.**—Under Sect. 24 of the Canadian Broadcasting Act, the CBC is required to review all applications for licences for new stations as well as applications for increases in power and changes in frequency or location. Two considerations are involved: (1) non-interference with the present and proposed facilities of the CBC, and (2) that high-power transmission facilities, on both long- and short-wave bands, are reserved for use by the CBC. Within these limitations, it is the policy of the Board to serve community interests by giving every practical encouragement and assistance to local stations.

The CBC operates three networks: the Trans-Canada and Dominion networks, serving English-language audiences from Atlantic to Pacific, and the French network, serving French-language listeners in Quebec. The Trans-Canada network is made up of 23 basic stations: 10 CBC-owned and 13 privately owned. There are 17 affiliated stations, four of which are CBC-owned Newfoundland stations. The Dominion network consists of 31 basic stations of which 30 are privately owned. Six affiliated privately owned stations receive Dominion network service. The French network has three basic CBC-owned stations, and ten privately owned stations.

On Apr. 1, 1949, when Newfoundland became the tenth Canadian province, the Trans-Canada network service was extended via a frequency modulation link and 541 miles of wireline. CBC-owned and operated stations were increased by four, and a new region was inaugurated utilizing Trans-Canada program service in conjunction with its own local community service programming. In July, 1949, the CBC had 18 stations of which seven had 50,000-watt transmitters. In order to present programs at suitable times and to give expression to varying interests in the six regions, CBC maintains regional offices and production facilities at St. John's, Nfld.; Halifax, N.S.; Chicoutimi, Quebec City and Montreal, Que.; Ottawa and Toronto, Ont.; Winnipeg, Man.; Edmonton, Alta.; and Vancouver, B.C.

## 5.—Broadcasting Stations of CBC Networks, as at July 15, 1949

NOTE.—The stations marked with an asterisk (\*) are CBC-owned.

**CBC International Service (Short Wave).—**The CBC International Service opened officially on Feb. 25, 1945. During the four years of operation a continuous growth has taken place bringing up to twelve the number of languages employed in serving seventeen different areas. In 1949 the 'Voice of Canada' was heard in English in the United Kingdom, British West Indies, Latin America, New Zealand, and Australia; in French, in France and Latin America; in Dutch, in the Netherlands and Latin America. Programs in Spanish and Portuguese form the main part of the transmissions to Latin America. In December, 1948, an Italian service was added to the already existing services to Germany, Austria, Czechoslovakia (Czech and Slovak transmissions), Denmark, Norway, and Sweden. Further increase in the number of European services are planned.

The CBC International Service transmitters are located near Sackville, N.B. Linked by land lines with studio and program headquarters located in the new Radio Canada Building at Montreal, the two 50,000-watt transmitters used by the International Service can operate in any of the international short-wave bands. Frequencies used depend on the solar activity, the geographical area served, the season of the year and the time of day.

Completed in 1948 new 21-megacycle antennae are now used regularly for transmissions to South Africa and for special broadcasts to Latin America. Although the CBC International Service in 1949 had no South African service of its own the CBC facilities for reaching this area as well as Europe (including the USSR), New Zealand, and Australia were placed at the disposal of the United Nations Organization Radio Division for a certain period of time, daily except Saturday and Sunday, to relay official reports and commentaries.

During the time the CBC International Service has been in operation its various sections have received altogether about 100,000 letters from listeners in all parts of the world. It is repeatedly stated in these letters that the Canadian programs are heard with unusual strength, and both the number and the contents of the letters testify to a keen interest in Canada aroused and satisfied by CBC International Service programs. Many listeners ask for specific information on a variety of topics ranging from trade conditions to social and educational matters. These inquiries are attended to by the language services or are referred to the Government Departments concerned. Reception reports are also verified.

Listeners in Europe and Latin America receive upon request an illustrated monthly booklet giving broadcast schedules, program details in the various languages, and the frequencies on which the transmissions may be heard. These monthly booklets also feature different aspects of Canadian life, further enlarging the comprehensive picture of Canada conveyed to listeners in 12 languages by means of news, commentaries, actuality broadcasts, interviews, documentary programs, talks, stories, music and drama.

**Domestic Program Service.**—During the year ended Mar. 31, 1948, 60,714 programs representing 18,234 hours of broadcasting were presented over the CBC Trans-Canada, Dominion and French networks. Of the total broadcasting hours, more than 82 p.c. were devoted to non-commercial and public service programs, and the remainder to commercial presentations. Of the total broadcasting hours in 1947-48, 65 p.c. was scheduled on the Trans-Canada network; the Dominion network released more than 7 p.c. and the remainder was released on the French network.

The CBC originated and produced 80 p.c. of its network broadcasts. Of the remainder 3 p.c. came from private stations and 17 p.c. were exchange programs from the United States and the British Broadcasting Corporation. Various categories of light music made up the greatest number of broadcast hours, followed in order by news, drama, semi-classical music, variety, agriculture programs, talks, educational broadcasts, religious periods, and programs devoted to the interests of women, sports enthusiasts, and children. Table 6 shows the proportion of time devoted to sustaining programs as compared with commercial programs, and analyses those made up of music as compared with the spoken word.

## 6.—Classification of CBC Programs, Year Ended Mar. 31, 1948

**Finances of the CBC.**—The 12th Annual Balance Sheet discloses that the finances and operations of the Canadian Broadcasting Corporation have continued to be subject to prudent control, resulting in an operating surplus of \$216,060 for the fiscal year 1948-49 after allowing \$172,309 for depreciation and obsolescence.

Fixed assets have increased by \$1,047,325 mainly on account of new 50 kw. transmitters at Lacombe, Alta.; Carman, Man.; and Hornby, Ont., a 10 kw. transmitter at Chicoutimi, Que.; and new frequency modulation stations at Montreal, Ottawa, Toronto and Vancouver. Financing of the capital expenditures has been made possible mainly by the granting of a loan of \$2,000,000 by the Federal Government, which is repayable in instalments within the 20 years ending 1975.

Licence fees have increased by \$892,450, due mainly to an amendment whereby the gross amount of moneys received in each year from licence fees is paid to the Corporation.

All expenses relating to the International Short-Wave Service are directly chargeable to the Federal Government as appropriated annually by Parliament. These are not considered chargeable to the Canadian Broadcasting Corporation because the fees collected from licences are used only to serve listeners within Canada.

### Section 4.—Privately Owned Radio Broadcasting Stations\*

**Development.**—Privately owned (non-government) broadcasting stations began operations in the early 1920's, about 12 years before any other service was available, and since then have offered regular broadcasting services to communities in every part of Canada. These stations now number 117 with a total wattage of 304,550. Operating mainly in conjunction with A.M. stations, are 20 F.M. stations with a combined power of 18,459 watts. There are in addition eight short-wave stations with a combined power of 6,685 watts. Most of these stations are located in the smaller centres of populations, some of them in remote districts which depend entirely upon privately owned stations for their broadcasting services.

The privately owned stations serve primarily the localities in which they are situated, the community served varying with circumstances. Many such stations are located in very small urban centres where they serve not only the local population but also a larger population scattered throughout the surrounding rural areas. Others may serve a metropolitan area and cities adjacent to it, in addition to the rural audiences and smaller centres lying between or beyond the urban areas.

These privately owned stations have a combined capital investment estimated at about \$20,000,000, employ more than 3,000 persons and disburse in salaries and wages an estimated \$7,000,000 annually. Revenue is obtained entirely from commercial advertising and they receive no part of the licence fee charged against operators of receiving sets. The privately owned stations are required to pay transmitter licence fees to the Canadian Broadcasting Corporation. These totalled approximately \$150,000 for 1949.

\* Revised by T. J. Allard, Manager, Radio Bureau, Ottawa.

**Administration.**—The independent stations operate under the Canadian Broadcasting Act, which is administered by the Canadian Broadcasting Corporation, and under regulations made by the CBC, in addition to the Radio Act and specifications laid down by the Department of Transport. Annual statements of "Proof of Performance", showing that public service obligations have been fulfilled, together with financial statements, must be filed with the licensing authority. Advance copies of programs scheduled must also be filed weekly with the CBC and a program log within seven days following operations. Advertising content or program is limited to 10 p.c. of program time.

**Broadcasting Facilities.**—Licences of the privately owned stations are granted upon recommendation of the Board of Governors of the Canadian Broadcasting Corporation by the Federal Government and are valid (unless cancelled or revoked) for a period of three years. Sale or ownership transfer of any station must be approved by the Federal Government.

The independent stations were at first limited to 1,000 watts power, which limit was recently increased to 5,000 watts. In 1948 three privately owned stations (CKAC, Montreal, CFRB, Toronto and CKLW, Windsor) were authorized to operate on 50,000 watts. The majority still continue to serve on 1,000 to 5,000 watts on the shared channels, the CBC stations occupying the clear channels allocated to Canada and operating in the main on 50,000 watts.

**Network Operations.**—Network operation in Canada (the process of having two or more stations broadcasting the same program at the same time) is at present restricted to the CBC by regulations made under powers granted under Sections 21 and 22 of the CBC Act. The CBC also has the right, except in the case of four stations, to bring commercial and other network programs in from the United States. Some privately owned stations do, however, serve as outlets, either basic or supplementary, for CBC network programs. All food, drug and medicine continuity used on Canadian broadcasting stations must be approved in advance of broadcast by the Department of National Health and Welfare.

## PART VIII.—THE POST OFFICE

The Canada Post Office Department was created at the time of Confederation in 1867 by the Canada Post Office Act for the superintendence and management of the postal service of Canada under the direction of the Postmaster General. For almost a century previous to Confederation postal services in the Canadian Provinces had been controlled by the British Postmasters General and administered by their deputies. Under the French Regime a courier service had been organized as early as 1703 between Quebec, Three Rivers and Montreal, while in 1734 a post road was constructed between the above-mentioned places and post houses, complete with post horses and vehicles, were established for use of travellers.

**Functions.**—The basic task of the Canadian Postal Service is the handling and transmission of mail matters, letters, parcels, newspapers, magazines, etc., and in discharging this duty it maintains a wide variety of services—air mail, railway mail, land mail and water services, etc.

This basic task is carried out by performance of certain functions which include: the sale of postage stamps and other articles of postage; the furnishing of information to the public respecting postage rates and other postal matters; the registration of letters and other articles of mail; the insuring of parcels; the acceptance of C.O.D.

articles for mail and despatch; the sorting, making up and despatching of ordinary and registered mail to other offices; the sorting and delivery of incoming mail of all kinds; the transaction of money-order business and the transaction of Post Office Savings Bank business. Because of its widespread facilities, it has been found expedient for the Post Office to assist other Government Departments in the performance of certain tasks which include: the sale of unemployment insurance stamps; the sale of Government annuities; the sale of radio licences; the distribution of income tax forms and Civil Service application forms and the display of Government posters.

All functions of the Postal Service, as far as the public is concerned, are centred in the post offices, of which 11,930 were in operation at Mar. 31, 1949. Money-order offices numbered 7,614, and postal notes were sold in 10,830 post offices. Postage paid by means of postage stamps in 1948-49 reached \$56,303,157. Post Office Savings Banks are in operation in all parts of the country and on Mar. 31, 1949, had combined deposits of \$37,741,389.

Post offices are established for the transaction of all kinds of postal business at places where the population warrants. The post office is a complete entity in rural districts and smaller urban centres. In the larger towns and cities where there is a main post office and where the population and size of population call for extra services, postal stations are established and sub-post offices are opened up. Letter-carrier delivery—twice daily to residential districts and three times to business districts—is given in 105 cities and towns by a uniformed force of about 5,000 letter carriers.

Postal stations are maintained on the same lines as the main post offices and perform full postal business including general delivery service and a post-office box delivery as well as letter-carrier delivery service, accommodating the surrounding district in which a postal station is maintained.

**Organization.**—The Canada Post Office is divided into two parts: the Operating Service; and the Post Office Department, as headquarters at Ottawa is called. The Operating Service is organized into five regions each under a Regional Director, who is the field representative of the Deputy Postmaster General and the head of one of the Headquarters Branches, viz., Administration, Operations, Communications and Financial.

Operating and secretarial features in the operating field affecting the Post Office and local mail services in urban centres are taken care of by the local postmaster. District Office functions relating to services in the district, and all inspections and investigations, are under District Post Office Inspectors situated at strategic centres across the country.

Postal service is provided in Canada from Newfoundland to the west coast of Vancouver Island, and from Pelee Island, Ont. (the most southerly point of Canada, to settlements and missions far within the Arctic. Points along the Hudson Bay, etc., receive their mail by steamer and on courtesy flights by aircraft, as well as by air-stage services to remote points.

Canada's air-mail system provides several flights daily from east to west and constitutes a great air artery from St. John's, Nfld., to Victoria, B.C., intersected with branch lines and connecting lines radiating to every quarter, and linking up with the United States air-mail system. Since July 1, 1948, all first-class domestic mail up to and including one ounce in weight has been carried (experimentally) by

air between one Canadian point and another, whenever delivery can thus be facilitated. Air-stage service provides the sole means of communication with the outside for many areas in the hinterland. There are approximately 19,000 miles of air-mail and air-stage routes in Canada.

Nevertheless, the principal means of mail transportation is still the railway-mail service which operates along about 40,000 miles of track, and covers an annual track mileage exceeding 45,733,000. The railway-mail service employs a staff of 1,300 mail clerks who prepare the mails for prompt delivery and despatch, while *en route* in the railway mail cars. Like its air-mail service, Canada's railway mail service is one of the most extensive in the world.

An extensive rural mail organization distributes the mail to more remote sections of the country: 4,943 rural mail routes are covered by mail couriers whose daily routes cover 113,000 miles of territory and serve 348,000 rural mail boxes. Isolated points are served by motor-vehicle and stage services. The rural mail routes are laid out in a circular pattern, each about 25 miles in circumference, and the couriers are employed on the tender system, tenders being awarded usually to the lowest tenderer who is paid according to his tender and who must provide all the requisite equipment.

The Post Office delivers an estimated 2,400,000,000 items of mail annually, and to do this utilizes the most up-to-date mechanical handling devices, including conveyer belts and electric cancelling machines, etc., in its larger offices.

The increase in postal business is one of the impressive features of Canada's economic development during the past 15 years. From \$30,367,465 in 1934, net income has increased year by year to \$80,618,401 by Mar. 31, 1949—the gross revenue for the latter year being \$95,957,469, an all-time high.

## Section 1.—Post Office Statistics

Tables 1, 2 and 3 give the number of post offices in operation together with revenues and expenditures for the past few years.

### 1.—Post Offices in Operation, by Provinces, as at Mar. 31, 1945-49

Province or Territory	1945	1946	1947	1948	1949
	No.	No.	No.	No.	No.

<sup>1</sup> Less than \$10,000.

**Postage.**—The net revenue receipts shown in Table 2 are received mainly in the form of postage. The gross value of the postage stamps, post cards, etc., sold during each of the latest five fiscal years was \$53,250,630 in 1945, \$52,135,846 in 1946, \$55,263,063 in 1947, \$56,303,157 in 1948 and \$56,317,570 in 1949. Receipts from postage paid in cash were as follows \$20,498,106 in 1945, \$23,252,162 in 1946, \$24,312,374 in 1947, \$28,959,194 in 1948 and \$33,315,148 in 1949.

## Section 2.—Auxiliary Postal Services

The auxiliary postal services include the issuing of money orders (including postal notes) and the facilities offered by the Post Office Savings Bank. In 1868, there were 515 money-order offices in operation, issuing orders to an amount of \$3,342,574; the following tables show the magnitude of operations in recent years. Statistical tables showing deposits with the Government Savings Banks and the business of the Post Office Savings Bank are included in the Chapter on Currency and Banking, pp. 1077-78.

# 4.—Operations of the Money-Order System, Years Ended Mar. 31, 1940-49

NOTE.—Figures for 1868-1939 will be found in the corresponding table of previous Year Books, beginning with the 1911 edition.

## PART IX.—THE PRESS

The tables of this Part are based on data obtained from *Canadian Advertising*. One serious difficulty has been encountered in connection with the compilation of circulation figures. In the case of daily newspapers, reliable circulation figures are relatively easy to obtain since, in their own best interest, such papers qualify for and subscribe to the Audit Bureau of Circulation requirements. In such cases A.B.C. 'net paid' figures were used. However, it is difficult to obtain reliable circulation figures for many weekly newspapers which do not subscribe to the Audit Bureau. In these cases, total circulation (paid and free) was taken where such figures were supported by sworn statements or some other reliable record.

The term "Controlled Distribution" is frequently met with in weekly newspaper reports. Exactly what this term means is doubtful. In some cases controlled distribution is probably legitimately subscribed and paid for, whereas in others the term may cover free distribution with various degrees of control. It is considered unwise, therefore, to combine all such circulation figures. Yet, since controlled distribution cannot be ignored, papers so reporting are shown separately in Table 5.

In compiling magazine circulation, total net paid figures, as reported by publishers to the Audit Bureau (including bulk sales), were used. In the relatively few cases where such figures were not available, minimum publishers' claims or sworn statements were accepted.

**Daily Newspapers.**—Daily newspapers are published in Canada in three main language groups: English-language, French-language and foreign-languages. French daily newspapers have, as would be expected, a wide circulation in the Province of Quebec and some of the largest of these papers have been established in the Province for over 60 years. Ten of the 11 French-language newspapers are published in that Province, the other being in the adjoining Province of Ontario. Over 93 p.c. of the total circulation of the English and French dailies is in the urban centres of 20,000 population or over.

**Weekly Newspapers.\***—The weekly newspapers have a somewhat wider circulation; only 61 p.c. of the stated circulation of weekly English-language newspapers (exclusive of the 'controlled' distribution given in Table 5), is in cities of 20,000 population or over and about 80 p.c. of the French-language weeklies. Canada is well served by foreign-language weekly newspapers. In 1948, they had a stated circulation of 204,143 copies among which Ukrainian papers had a circulation of 70,401 copies, German 37,874, Yiddish 28,262 and Polish 16,425 copies.

**Other Publications and Periodicals.**—Table 7 gives the number of publications, other than newspapers, published in Canada. Monthly and weekly magazines and periodicals enjoy the largest circulation while those dealing with home, social and welfare, and agricultural and rural topics, religious, trade, industry and related publications are the most popular types.

\* Including a very few semi- and tri-weekly newspapers.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

## PART I.—THE MOVEMENT AND MARKETING OF COMMODITIES

The different directions that economic development has taken across Canada and the diverse resources of various parts of the country have led to a vast exchange of products. The task of providing goods and services where they are required for consumption or use by the widely scattered population of 13,636,000 (Sept. 1, 1949, estimate) accounts for a greater expenditure of economic effort than that required for the prosecution of the country's great volume of foreign trade, high though Canada ranks among the countries of the world in this field.

Domestic trade is broad and complicated: it encompasses all values added to commodities traded in, provincially and interprovincially, by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense it embraces various professional and personal services including those directed to the amusement of the people, such as theatres, sports, etc. However, not all phases of this broad field are covered here though, wherever possible, cross references are given to related material occurring in other Chapters. The arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles. The Index will be found useful in this respect.

## Section 1.—The Grain Trade

### Subsection 1.—Governmental Agencies Regulating or Co-operating with the Grain Trade

The agencies exercising control of the grain trade in Canada are: the Board of Grain Commissioners, which administers the provisions of the Canada Grain Act, 1930; and the Canadian Wheat Board, which operates under the Canadian Wheat Board Act, 1935. An account of the organization and functions of the Board of Grain Commissioners appears at pp. 481-482 of the 1941 Year Book. An article on the operations of the Canadian Wheat Board is included in the 1939 Year Book. This material is brought up to date in the 1947 and 1948-49 editions.

### Subsection 2.—Distribution, Storage and Inspection of Field Crops\*

In the latest two years total disposition of wheat declined from 503,100,000 bu. in 1945-46 to 401,200,000 bu. in 1946-47 and to 351,000,000 bu. in 1947-48. Reductions in amounts fed to live stock, lower domestic flour consumption and decreases in quantities used in industry are the chief reasons for the decline in domestic use which dropped from 179,200,000 bu. in 1943-44 to 156,000,000 bu. in 1947-48. Exports have also fallen off markedly from 340,000,000 bu. in 1945-46 to 195,000,000 bu. in 1947-48.

Carryover stocks which were high during the war years declined to the low level of 77,700,000 bu. at July 31, 1949.

### 1.—Production, Imports, Exports and Domestic Use of Wheat and Wheat Flour, Crop Years Ended July 31, 1943-48

(Millions of Bushels)

Item	1942-43	1943-44	1944-45	1945-46	1946-47	1947-48

Carryover July 31.....	594.6	356.5	258.1	73.6	86.1	77.7

<sup>1</sup> Less than 100,000 bu.

The domestic and export trade in Canada's five principal grain crops are shown in some detail in Table 2. Exports of wheat, oats and barley were substantially lower than in 1946-47, but rye and flaxseed showed increases. Feed for live stock and poultry each year accounts for large quantities of grain, about 450,000,000 bu. being used for this purpose in 1947-48.

\* Revised by the Agriculture Division, Dominion Bureau of Statistics.

## 2.—Distribution of Canadian Grain Crops, Crop Year Ended July 31, 1948

(Millions of Bushels)

Item	Wheat	Oats	Barley	Rye	Flaxseed

<sup>1</sup> Less than 100,000 bu.<sup>2</sup> Export and import data for wheat, oats, barley and rye, respectively, include flour in terms of wheat, rolled oats in terms of oats, malt in terms of barley and rye-flour in terms of rye.

**The 1948-49 Grain-Marketing Policy.**—World food production and supplies in 1948-49 were materially higher than in the previous year, and the grain export surplus was the largest for some years. With grain production in 1948 exceeding or approaching pre-war levels in nearly all regions, the stringent post-war shortage was alleviated. As a result bread rationing was discontinued in most countries and price declines occurred in all grains.

Canada's 1948 wheat crop amounted to 393,000,000 bu.; exports of wheat and flour in terms of wheat in the crop year ended July 31, 1949, were 231,600,000 bu.; and carryover stocks at July 31 were 98,700,000 bu.

**Wheat.**—The Wheat Board continued in the year 1948-49 to be the sole purchaser of wheat produced in the Western Division of Canada. An initial payment of \$1.75 per bu., basis No. 1 Northern in store Fort William, was paid to producers and participation certificates were issued. Under the provisions of the Canada-United Kingdom Wheat Agreement, Canada supplied 140,000,000 bu. of wheat and flour in the crop year 1948-49.

The price of wheat to the United Kingdom was \$2 per bu., basis No. 1 Northern in store Fort William plus 5 cents per bu. carrying charge. During the crop year the domestic price was increased to \$2 per bu., plus the 5 cents carrying charge. The weighted average price of sales of wheat and wheat for flour to countries other than the United Kingdom during the crop year was \$2.23 per bu.

An international wheat agreement was completed in 1949 and by July 1, 22 countries had signed. The date of commencement of the agreement was Aug. 1, 1949, but an extension to Oct. 31 was granted to allow other countries to sign. The original agreement called for the purchase of 456,000,000 bu. but the attainment of this figure depends upon all the importing countries involved signing the pact. The agreement is to remain in force for four years. Maximum and minimum prices are fixed for each year: \$1.50 to \$1.80 in 1949-50; \$1.40 to \$1.80 in 1950-51; \$1.30 to \$1.80 in 1951-52 and \$1.20 to \$1.80 in 1952-53. These prices are fixed in Canadian currency per bu., and the parity of the Canadian dollar ruling on Mar. 15, 1949, for No. 1

Northern in bulk in store Fort William. Canada's share of the guaranteed exports based on 456,000,000 bu. guaranteed imports, amounts to 203,000,000 bu. This figure may be reduced if any import countries do not ratify the agreement.

*Coarse Grains.*—Support prices for oats and barley were continued by the Canadian Wheat Board during the crop year 1948-49. On July 9, 1948, the Government announced the payment of 5 cents per bu. on oats and 11 cents per bu. on barley delivered and sold by western producers between Aug. 1 and Oct. 21, 1947 when price ceilings were removed from these grains. The total distribution was \$5,111,529. Adjustment payments were also made by elevator companies.

It was announced on Mar. 7, 1949, that the Canadian Wheat Board would distribute \$8,672,233 to western producers who delivered oats and barley in 1947-48. This money represented the surplus accumulated in the equalization funds and payment amounted to 5.881 cents per bu. for oats and 6.789 cents per bu. for barley.

**Licensed Grain Elevator Capacity.**—At Dec. 1, 1948, total licensed grain elevator capacity in Canada stood at 486,000,000 bu., compared with 482,000,000 bu. in 1947. Western country elevators with their annexes made up over one-half of this total with 265,000,000 bu. capacity. Capacity for storing grain at the Lakehead was 80,000,000 bu., and West Coast, St. Lawrence and Maritime ports had facilities for holding 47,000,000 bu. ready for overseas movement. The detailed table giving grain elevator capacities formerly introduced here will be found in Section 3, Subsection 1, of this Chapter, at p. 845.

### 3.—Quantities of Grain Inspected, Crop Years Ended July, 31, 1947 and 1948

**Wheat Flour.**—The steadily rising flour production in Canadian mills over the last few years came to a halt in 1947-48 with an output of only 24,200,000 bbl., a decline of 4,400,000 bbl. from the all-time high of the previous crop year. Wheat milled for the production of this flour amounted to 109,800,000 bu., a decrease of 18,000,000 bu. from the record year of 1946-47. Exports of wheat flour (based on customs returns) for the crop year under survey amounted to 13,700,000 bbl., equivalent to 57 p.c. of the same year's production but a decrease from the 1946-47 export by 4,000,000 bbl.

Milling capacity for the last crop year averaged 81 p.c., a decrease of 20 p.c. from that of the previous year.

**Section 2.—Live-Stock Marketings\***

Commercial marketing of cattle fell off considerably in 1947. Part of the decrease was due to reduced deliveries to inspected plants with a large-scale packing-house workers' strike in September and October of that year. A new high level of cattle marketings was reached in 1948. A consistently high level of prices and the removal of restrictions on the export of slaughter and feeding cattle and dressed meats to the United States (effective Aug. 16, 1948) contributed to a record movement of cattle off farms. Hog marketings, about 300,000 higher in 1947 than in 1946, showed little change through 1948. Commercial marketings of sheep and lambs declined sharply during each of the last three years and the total primary movement during 1948 was only about two-thirds of that in 1945.

\* For more detailed information on this subject, see "Live Stock and Animal Products Statistics", published annually by the Dominion Bureau of Statistics; and the "Annual Market Review", published by the Live Stock Branch of the Federal Department of Agriculture. Statistics of live stock and poultry are given at pp. 429-435 of this volume.

### Section 3.—Warehousing and Cold Storage\*

Among the means by which the utilities of ‘place’, ‘time’ and ‘possession’ are added to the products of industry, warehousing ranks high. Its importance has been emphasized in modern times because of the introduction of cold-storage methods to the conservation of perishable foods.

The great difficulty in presenting warehousing statistics lies in the fact that it is not an easy matter to define clearly what are to be regarded as stocks in storage. In these days of complicated business relationships and especially since the rise of the department store and chain store as characteristic institutions in the retail merchandising field, it often happens that warehousing is carried on in close relationship to merchandising. However, if the strict economic definition of warehousing is adopted then this term should be restricted to those facilities that add the utilities of ‘time’ to the ‘form’ utilities that are the product of the extraction and manufacturing industries. Since the warehouses established in close connection with retail trade are more often than not convenient places for the temporary storage of goods in process of transfer from the manufacturer or wholesaler to the consumer, then they are not perhaps, in the strict economic sense, services which add the utility of ‘time’ to commodities already worked up into ‘form’. At least, since some clear line must be drawn and because separate statistics of this branch of storage are not available, it is considered practicable to restrict the definition of warehousing as here used.

This Section as it appears in the current Year Book does not attempt to go much further than to draw these statistics together under one general heading. The purpose is to develop the statistics of warehousing and gradually build up an

\* The material in this Section was supplied by various Divisions of the Departments of Agriculture, Fisheries, Mines and Resources, National Revenue and of the Dominion Bureau of Statistics.

improved and more co-ordinated series of data. Subsection 1 presents statistics of the licensed storage of grain. Subsection 2 deals with cold-storage facilities without which perishable foods such as meats, dairy products, fish and fruits could not be exchanged or distributed on a wide scale; it includes also figures of stocks of food on hand. Subsection 3 deals with the storage of petroleum and its products and Subsection 4 with public warehouses and customs warehouses. The facilities that specialize in the storage of tobacco and alcoholic liquors are analysed in Subsection 5. These bonded warehouses, as they are called, are under the strict surveillance of Federal Government excise officers who supervise all movements into and from such places of storage.

### Subsection 1.—Licensed Grain Storage

At Dec. 1, 1948, total licensed grain storage in Canada stood at 486,000,000 bu., an increase of 4,000,000 bu. from the level of Dec. 1, 1947. Since 1943, licensed grain storage capacity has dropped off considerably, largely as a result of the dismantling of temporary storage erected to handle the huge stocks of grain accumulated in the early years of the War. At Dec. 1, 1943, licensed grain storage capacity had reached an all-time high of 603,000,000 bu.

With Canadian grains in great demand both on the domestic and export markets the percentage of capacity occupied is quite low. Even in November, which is normally a peak storage month, the capacity occupied in both 1947 and 1948 stood at only 40 p.c. On Dec. 3, 1942, when both stocks in store and storage capacity were at near record levels, the licensed capacity occupied was just under 80 p.c.

At July 31, 1948, the end of the Canadian crop year, only 11 p.c. of licensed capacity was occupied. With this situation existing at the beginning of the next crop year and taking into consideration the moderately large crop harvested in 1948, ample storage space was generally available in all positions during the 1948-49 crop year.

Additional information on the distribution, storage and inspection of the principal field crops will be found in Section 1, Subsection 2 of this Chapter pp. 838-841.

### 8.—Licensed Grain Storage Capacity and Grain in Store, 1947-48 and 1948-49

NOTE.—These figures are lower than those shown in Table 14, p. 428, for the reason that they do not include stocks in transit or in eastern mills.

**Subsection 2.—Cold Storage and the Storage of Foods**

**Cold-Storage Warehouses.**—Under the Cold Storage Act, 1907 (6-7 Edw. VII, c. 6; now consolidated as R.S.C., 1927, c. 25), subsidies have been granted by the Federal Government to encourage the construction and equipment of cold-storage warehouses open to the public: the Act and regulations made thereunder are administered by the Department of Agriculture.

There are nine classifications of cold-storage warehouses in Canada: (1) public warehouses which store foods and food products and of which the entire space is open to the public; (2) semi-public, or those which store foods and food products and which, while retaining part of the space for the products of the owner, allot the remainder to the public; (3) private, or those which store foods and food products and allot no space to the public; (4) creamery, which are used only for storing butter made in the creamery; (5) creamery locker having refrigerated space for their own butter and, in addition, lockers for rental to the public; (6) cheese factory, used only for storing cheese made in the factory; (7) cheese factory locker, or those which have refrigerated space for their own cheese and, in addition, have lockers for rental to the public; (8) locker, where the total space is occupied by lockers for rental to the public and which may, in addition, cut, process, chill and freeze foods or food products for storage in lockers; and (9) grading station having refrigerated space used solely or principally for assembling cheese for grading purposes.

No hard and fast rule can be laid down for distinguishing between public and private warehouses. In general, those owned and operated by firms trading in the goods stored in the warehouses are designated "private", though most of these places rent space to the public when it is not required for their own purposes.

*Cold Storage of Wiltshire Pork Sides.*—Figures of meat in cold-storage and other warehouses in 1948 are given in Table 11. The 1948-49 Year Book, at p. 806, gives a statement of wiltshire pork sides in storage by the Meat Board of the Department of Agriculture at Apr. 3, 1948. The Meat Board did not carry out a storage program in 1949 and there were no stocks at Apr. 1 of that year.

*Cold Storage of Fish.*—The cold-storage holdings of fish averaged 35,800,000 lb. monthly in 1948 as compared with 37,500,000 lb. in the preceding year. At Jan. 1, 1949, the stocks were 37,400,000 lb., which was 3,500,000 lb. below the total at the beginning of the preceding year. Seasonal variations in the stock position, with a low in the spring and a high in the autumn, follow naturally from the fact that the major part of frozen fish is produced in the summer and early autumn months. Stocks piled up by autumn are intended to form the main supply of frozen products until the heavy production period of the following summer. The variation in the stock position from month to month is illustrated in the following statement:—

<i>Month</i>	<i>'000,000 lb.</i>	<i>Month</i>	<i>'000,000 lb.</i>
January 1.....	40·9	July 1.....	35·7
February 1.....	34·4	August 1.....	39·1
March 1.....	28·3	September 1.....	41·0
April 1.....	23·5	October 1.....	43·2
May 1.....	19·7	November 1.....	47·2
June 1.....	32·1	December 1.....	44·1

On the average, the 1948 stocks of frozen fish were constituted as follows: 82 p.c. fresh-frozen sea fish (including a small amount of shellfish); 9 p.c. fresh-frozen fresh-water fish; and 9 p.c. smoked sea and fresh-water fish. The monthly average of the stocks of frozen fresh sea fish amounted to 29,300,000 lb.; that of fresh-frozen fresh-water fish to 3,200,000 lb.; and that of smoked fish to 3,300,000 lb. The main species of sea fish kept in cold storage are salmon, halibut, cod and herring; the most important fresh-water species are generally whitefish, pickerel and tullibee; the smoked fish consists mainly of herring, cod and haddock.

On the Atlantic and Pacific coasts various firms and individuals engaged in producing and marketing fish operate freezing plants which also include cold-storage chambers or warehouses. All the larger companies have both freezing and cold-storage facilities, very often at several plants. In both coastal areas there are also public or other warehouses that handle fish as part of their general cold-storage business. In the inland sections of the country there are plants concerned mainly with freezing and holding fish but in most cases cold-storage fish stocks, whether of local production or from outside, are handled by general warehousing companies.

Freezing and cold-storage facilities vary considerably both in poundage capacity and in temperature maintenance. For freezing purposes some develop temperatures of  $-40^{\circ}\text{F.}$  or lower while others operate at  $0^{\circ}\text{F.}$ ,  $-5^{\circ}\text{F.}$  or  $-10^{\circ}\text{F.}$  For storage purposes, extremely low temperatures are not necessary. In some cases zero or lower may be the level and in other cases it may be anything up to  $10^{\circ}\text{F.}$  or  $15^{\circ}\text{F.}$

above zero. Federal fisheries technologists advise that in holding frozen fresh fish the temperature should not be higher than about  $-10^{\circ}\text{F}$ . Smoked fish, though perishable, does not require such low holding temperatures as that of frozen fresh.

*Cold Storage of Dairy Products.*—Cold-storage facilities are a necessary adjunct in the manufacture of dairy products since most of them are perishable to a varying degree.

All creameries have facilities for the storing of butter, the size and type of storage depending on the size of the creamery. Small country plants may have storage capacity for only 50 or 100 boxes of butter with refrigeration capable of bringing the temperature down to about  $20^{\circ}\text{F}$ . These rooms are used mostly for the chilling of butter for printing. If the butter is not printed for immediate sale, the butter solids are disposed of or transported to central cold storages or larger creameries with better refrigeration facilities. Butter stored for a long holding period is usually carried at a temperature of  $0^{\circ}\text{F}$ . or lower. Larger creameries may have such storage facilities adequate to store several carloads of butter or the butter may be transported to private or public cold storages in the larger urban centres.

In the case of cheese, temperature control is important in the curing process as well as in the prevention of deterioration. Most cheese factories are equipped with mechanical refrigeration and are required to have storage capacity for the production of 17 days during the period of maximum manufacture. The cheese is then transferred to central warehouses. Under the legislation administered by the Food and Drugs Act all unpasteurized cheese must be aged for 90 days before sale for consumption. During the first ten days following manufacture, the period when the cheese is maturing, storage must be at not less than  $58^{\circ}\text{F}$ . and during the remainder of the 90-day period at a temperature of not less than  $45^{\circ}\text{F}$ . For the holding period beyond 90 days the temperature is lowered to just above freezing point, especially if the cheese is to be held for a year or more.

Cold storages are essential in the ice-cream industry as the freezing of this product is part of the manufacturing process. Ice-cream hardening rooms are usually held at a temperature of  $-20^{\circ}\text{F}$ . to  $-30^{\circ}\text{F}$ .

Because of the perishable nature of milk the market milk industry must have cold storage too. As soon as the milk is bottled, it is placed in storage at a temperature of about  $40^{\circ}\text{F}$ . and held until the next day when it is delivered. Dry whole milk and other dried milk products containing fat are usually stored in cool air chambers to prevent rancidity, the temperature depending on the length of the storage period.

*Cold Storage of Other Foods.*—During the years 1943-47 the holdings of apples in Canada at the beginning of the storage season on Dec. 1 averaged 53 p.c. cold and 47 p.c. common storage.

In pre-war years the bulk of the crop was exported early in the season but changes in marketing practices due to continued lack of export outlets in the United Kingdom and Continental Europe have necessitated longer storage in Canada. In order to compete on both the domestic and export markets, however, additional storage space is gradually being constructed in Nova Scotia, Ontario and British Columbia.

Apple storage temperatures vary somewhat by varieties but are generally in the neighbourhood of 30°F. to 32°F.

Potatoes are generally held at production points and shipped out as needed throughout the season. While warehouse storage is quite common in parts of the Maritimes where commercial production is centred, most of the crop is stored in frost-proof cellars and pits.

### **Subsection 3.—Storage of Petroleum and Petroleum Products**

The storage facilities for petroleum and petroleum products in Canada consist of welded or bolted steel tankage located principally at refining and producing centres or at main distributing points. These centres are at or near Halifax, Quebec, Montreal, Ottawa, Toronto, Sarnia, Fort William, Regina, Calgary, Turner Valley, Edmonton and Vancouver. The loss through evaporation varies widely with the type of product being stored, the average atmospheric temperature, and the physical features of the storage tanks, some of which have special mechanical devices to minimize the loss. The use of aluminum paint on the outside of the tanks is of material aid in this direction.

The usual procedure is for the refining company to establish bulk storage plants at convenient distributing centres usually on a water-front so that full advantage can be taken of the lower cost of water-borne traffic. From these centres the goods are transferred by rail or by motor-tank truck to smaller distributing depots or directly to retail outlets. While pipelines are not used to any appreciable extent in Canada for transporting finished petroleum products, they are used for the transportation of crude petroleum from Portland, Me., U.S.A., to Montreal, from Oklahoma, U.S.A., to Sarnia, from the Turner Valley to Calgary and from the Leduc field to Edmonton.

A pipeline from the Edmonton area to Regina is under construction which will carry the greatly increased production of the Leduc and Redwater fields. The extension of this pipeline from Regina to Superior, Wis., U.S.A., was approved by the Transport Commission on Sept. 12, 1949.

Table 12 gives the inventories of petroleum and petroleum products annually at Jan. 1 from 1940 to 1949.

## Subsection 4.—General Warehousing

**Public Warehouses.**—The Dominion Bureau of Statistics undertook in 1944 an annual census of the principal public warehouses in Canada. Warehousing carried on by co-operatives, packing houses and other firms operating storage facilities in connection with their own businesses are not included. Several companies deriving more revenue from a moving, cartage or carrier business than from warehousing are also not included but are covered in the report "Motor Carriers, Freight-Passengers, 1947". In order to show the trend in the industry Table 13 was prepared from data supplied by 122 firms which reported both for 1946 and 1947. Further details are given in the report "Warehousing, 1947", published by the Dominion Bureau of Statistics.

## 13.—Summary Statistics of 122 Public Warehousing Firms Reporting in 1946 and 1947

Item	1946	1947	Item	1946	1947
Total revenue..... \$	14,711,013	16,590,001	Wages, regular..... \$	4,492,234	4,819,871
Total operating expenses. \$	12,606,854	13,867,421	Wages, casual..... \$	355,642	320,981
Net operating revenue.. \$	2,104,159	2,722,580	Salaried employees....No.	959	1,054
Net income..... \$	1,042,030	1,824,401	Salaries..... \$	1,754,192	1,985,244
Employees, regular....No.	3,032	3,129	Total salaries and wages. \$	6,602,068	7,126,096
Employees, casual.... "	442	358			

The net occupiable space reported by 129 firms in 1947 comprised 3,339,652 sq. ft. for merchandise, 2,025,367 sq. ft. for household goods and 15,263,284 cu. ft. of cold-storage space. The advance over 1946 was in cold storage which increased by nearly 1,000,000 cu. ft.

**Customs Warehouses.**—Warehouses for the storage of imported goods are known as customs warehouses. These are divided into nine classes as follows: (1) those occupied by the Federal Government, some of which are used for examination and appraisal of imported goods while others, known as King's Warehouses, are used for the storage of unclaimed, abandoned, seized or forfeited goods; (2) warehouses, consisting of an entire building or part thereof, properly separated from the rest of the building by a partition, which are used exclusively for the storage of imported goods consigned to the proprietor of the building; (3) buildings or parts of buildings properly partitioned off, used for the storage of imported goods consigned to the proprietor or others or for the storage of unclaimed or seized goods; (4) sufferance warehouses operated by the owners of vessels for the storage of in-bond goods transported by water or air;\* (5) yards, sheds and buildings intended for the storage of imported coal and coke; (6) farms, yards, sheds, etc., which an importer of horses or sheep intends to use for the feeding and pasturing of imported animals other than pure-bred mares; (7) warehouses for the storage of animals, including horses for racing, and articles for exhibition or for competition for prizes; (8) warehouses for clover seed imported for the purpose of being re-cleaned and prepared for a foreign market; and (9) yards, sheds, etc., which importers intend to use for the storage of goods too heavy or too bulky to be admitted to an established customs warehouse.

Railways and express companies have similar facilities.

### Subsection 5.—Bonded Warehousing and Storage of Wines

**Bonded Warehousing.**—The Excise Duty Branch of the Department of National Revenue considers any premises licensed under the Excise Act to be a warehouse, whether for storage of raw materials to produce finished tobacco or cigar products or for spirits or malt used for brewing. Practically the total production of spirits is placed in bonded warehouses while only a small part of the output of beer is retained in storage. Wine, unlike spirits and beer, is not secured under bond. All imports of alcoholic beverages must go through bonded warehouses before being released to Provincial Liquor Commissions or Boards, or other agencies authorized by the Commissions or Boards to take alcoholic beverages out of bond. Similarly, tobacco, cigars and cigarettes which are not stamped and duty paid, are secured in bond. In addition to these warehouses, there are those in which no manufacturing or production is carried on, but are used solely for the storage of goods upon which duty has not been paid. Goods are stored in these warehouses usually for the purpose of rapid distribution and for delivery as ships' stores. The conditions under which spirits, beer and tobacco are stored are described in the following paragraphs.

*Spirits.*—There are three types of storage in distilleries. The first consists of metal tanks in bonded warehouses of from 15,000 to 40,000 gal. capacity, which are used mainly for the storage of alcohol or other high-proof spirits. The second type are rack warehouses of solid brick or cement in which 8,000 to 60,000 bbl. are stored on racks in tiers of four to five barrels high. These barrels are mostly from 40 to 45 gal. capacity. The third type consists of bonded warehouse buildings in which casks and barrels of odd dimensions are stored on the floor and, to some extent, on skidways on top of the first row.

The tank warehouses are not generally heated. In most of the rack warehouses the heat is kept at a constant temperature and the humidity at a specific degree.

There are also other bonded warehouses for the storage of alcohol to be used, at a low rate of duty, in the production of pharmaceuticals, perfume, and vinegar.

*Beer.*—After beer is produced it is run to storage tanks some of which are of metal and glass-lined while others are of wood. No constant degree of heat or humidity is necessary in a brewery warehouse, except for the storage of lager beer when the temperature is kept below the freezing point. Malt, for use in the production of beer, is controlled under bond and is stored in bins of wood or cement; these are Crown locked.

*Tobacco.*—Raw-leaf tobacco when cured is, in the main, pressed in wooden hogsheads of 1,100 or 1,200 lb. weight. After shipment to the manufacturer it is stored in bond, since it becomes dutiable upon entrance to the manufacturer's premises and also after manufacture into cigars, cigarettes, smoking tobacco, etc. The field warehouses, where the tobacco is stored after curing, are not secured with Crown locks but shipment and sale are regulated by permit. Cigar leaf-tobacco is generally sold in cases so as not to injure the delicate leaf. The type used for fillers is packed in jute.

**SPIRITS, TOBACCO AND MALT IN BOND.**—Table 14 shows the quantities of distilled liquor, tobacco, cigars and cigarettes in bond in recent years. The yearly inventory of breweries shows an increase of total gallonage of beer in stock from 19,972,000 in 1947 to 22,137,000 in 1948.

## 14.—Distilled Liquor, Tobacco, Cigars and Cigarettes in Bond, Quarterly, 1945-49

1949....."	17,527	3,108	3,519	3,809

<sup>1</sup> Includes Newfoundland.

In Table 15 the quantities of spirits, malt and tobacco products that have been released from bond for consumption are shown for the years 1940 to 1949. These figures, supplied by the Department of National Revenue, are the most reliable data for the consumption of these bonded products. Before the publication of the 1948-49 edition of the Year Book they appeared under "Dominion Public Finance" (see p. 964 of the 1947 edition).

### 15.—Spirits, Malt Liquor, Malt and Tobacco taken out of Bond for Consumption, Years Ended Mar. 31, 1940-49

NOTE.—Figures for the years prior to 1900 are given in the 1916-17 Year Book, p. 528; for 1901-10 in the 1933 Year Book, p. 840; for 1911-21 in the 1938 Year Book, p. 855; for 1922-29 in the 1945 edition, p. 936; and for 1930-39 the 1947 edition, p. 964.

Year	Spirits gal.	Malt Liquor gal.	Malt lb.	Cigars No.	Cigarettes No.	Tobacco <sup>1</sup> lb.
1940.....	2,032,987	65,912,495	143,056,382	139,698,605	7,301,419,960	28,403,208

<sup>1</sup> Figures include snuff.

**Storage of Wines.**—The wine industry is confined to a few localities such as the Niagara Peninsula in Ontario and the Okanagan Valley in British Columbia. Firms manufacturing native wines are not bonded, as far as the Federal Government is concerned, nor is wine in storage for maturing placed in bond. The only goods warehoused in bond in connection with wineries are their sugar supplies and supplies of grape spirit distilled by the distilleries and held by the wineries for fortifying their wines. A part of each year's production is, however, stored at the wineries at a cool and even temperature. Native wine produced and placed in storage for maturing and blending for the years 1944-47 was reported as follows:—

Year		Ontario	Other Provinces	Total

### Section 4.—Merchandising and Service Establishments\*

Because of the multiplicity of establishments which make up the distributive system, complete coverage of merchandising and service establishments is possible only through the Censuses of 1931 and 1941. Although some information was gathered prior to 1931 the census of that year was the first complete survey of distribution encompassing all wholesale, retail and service businesses including hotels. Tabulations may be found in Volumes X and XI of the Census of 1931. The Census of 1941 included the same group of establishments with certain refinements and added statistics. Results for retail establishments are contained in Volume X and for wholesale and service establishments in Volume XI of the 1941 Census publications.

With the restoration of the supply of consumer goods following the end of the Second World War, business and industry became acutely aware of the value of marketing data to be obtained from the census surveys. However, as time elapsed,

\* Prepared in the Merchandising and Services Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

shifts in population, the location of new areas of natural resources, the restoration of freer competition and the emergence of many new consumer goods on the shelves of distributors created needs for up-to-the-minute data. While monthly data on retail and wholesale trading had been gathered for several years prior to 1941, efforts have been made since 1945 to extend and improve these current series so as to provide the marketing information required by industry and government. For this reason, and because several of these revised or newly introduced series have stabilized, most of the space in this Section of the Year Book is given to recent data. The principal limitation of such information is the lack of detailed county-by-county and city-by-city figures on which marketing programs may depend, but further research will, in time, yield more and more adequate data for users of consumer expenditure data.

More detailed descriptions of census data may be found at pp. 596-621 of the 1945 Year Book and with slightly different emphasis at pp. 527-536 of the 1943-44 edition. Summaries of wholesale, retail and service establishments by type of operation, kind of business and region appear in this Section.

### Subsection 1.—Results of the 1941 Census of Merchandising

**Wholesale Trade.**—As mentioned on p. 856, detailed tabulations of the operations of wholesalers, together with explanations of the terms used in describing the various classes of wholesale business, are given in Volume XI of the Census of 1941, and in briefer form in previous issues of the Year Book. Table 16 recapitulates these data regionally and by type of operation.

<sup>1</sup> Includes Yukon and the Northwest Territories.

**Retail Service Establishments.**—This group of businesses includes those that provide personal or repair services or that offer amusement or recreation facilities to the public. A portion of these firms indicated some merchandising in their returns, but were classified as services because the greater proportion of their annual business consisted of service receipts. The principal statistics on retail service establishments derived from 1941 Census returns are shown in Table 18.

### Subsection 2.—Current Merchandising and Service Statistics

Indexes of wholesale sales and inventories for wholesalers proper who sell largely to retailers are based on a sample of firms in nine principal trades. Monthly and annual indexes have been available since 1935. Estimates of Canada's retail trade are now being compiled on a new basis in order to overcome shortcomings of the former monthly and annual series. Coverage for the retail field has been enlarged to include smaller sizes of stores. Adequate weighting has been given to sales trends for different sizes of stores, and results for several additional trades are compiled separately. Revised data have been prepared for 1947 and 1948, but no provision has yet been made to obtain comparable figures for the years 1942 to 1946.

Studies of operating results for wholesale establishments and chain stores have been made, for the year 1947, to complement those covering independent stores which were prepared for 1946 and earlier years. Summary statistics for both of these appear in this Subsection.

The need for current information on retail consumer credit was recognized when a program of wartime controls limited credit dealing during the Second World War. Studies of trends in retail credit were undertaken by the Wartime Prices and Trade Board to observe the effects of credit regulations. Later the Dominion Bureau of Statistics carried on this work adding several trades and extending the coverage.

Statistics on the operations of finance companies are also available for 1947 and 1948, the results of a study somewhat similar to one carried out in 1941. Special attention is given to the automotive division which forms the major portion of the activities of these organizations.

**Wholesale Trade.**—Monthly index numbers of sales in several branches of the wholesale trade have been prepared since 1935. Indexes of sales (on the base 1935-39=100) are calculated each month for nine wholesale trades, based on reports received from a sample of firms whose sales made up about 68 p.c. of the total volume of business done by wholesalers in those trades in 1941. The sample of reporting firms is limited to wholesalers proper, i.e., wholesale establishments that perform the complete functions of jobbers and wholesalers, buying merchandise in large quantities on their own account and selling in broken lots. In addition, the trades selected are those engaged principally in supplying retailers and include the following: automotive supply and equipment, drugs, clothing, footwear, dry goods, fruits and vegetables, groceries, hardware, and tobacco and confectionery. Inventory figures are calculated from a smaller sample, since not all firms are able to provide month-end inventory figures as required.

**Recent Trends.**—The dollar volume of wholesale sales in Canada in 1948, measured by the composite index of sales in the nine lines of trade for which figures are available, was 4 p.c. higher than in 1947, 99 p.c. higher than in 1941 and 183 p.c. above the average for the base period, 1935-39. The average index for the twelve months of 1948 (on the base, average for 1935-39=100) stood at 283.2 compared with 272.0 for 1947 and 142.0 for 1941.

There was little variation in percentage changes from 1947 for the different regions of the country although the Western Provinces registered slightly greater increases than those of the east.

Tobacco and confectionery and drug wholesalers, with gains of 12 p.c. and 11 p.c., respectively, were the only trades to register greater increases over 1947 than occurred in 1947 over 1946. Increases in these trades, however, were larger in the

earlier part of 1948 than in the later part of the year. In all other trades surveyed, there was a continuation of the lowering of the rate of increase that has been evident over the past several years.

**Operating Results of Wholesalers.**—A study on the operations of wholesalers was carried out for a few trades in 1938, but until 1947 no other survey on this subject had been undertaken by the Dominion Bureau of Statistics. Wholesalers proper—performing the functions of warehousing and delivery and holding title to goods sold—for the major consumer commodity trades were canvassed as to details on their 1947 operations.

These statistics assist merchants by permitting a comparison of their own operations with the average for their trade and enable them to assess the efficiency of their own phases of operation or indicate areas of operation where economies might be effected. Expenses were grouped into three sections—selling; warehouse and delivery; general and administrative—with a further classification of expense items under each function. Results were presented by sales-size groups for each trade. In addition to profit and loss data, information was obtained on sales composition, sales distribution, floor space, and other factors having a bearing on operating ratios.

divided by average of beginning and year-end inventories.

<sup>2</sup> Cost of goods sold

**Retail Trade.**—Canada's retail trade for 1948 has been estimated at approximately \$8,110,000,000. The year was a prosperous one for retail merchants and sales volume exceeded the 1947 total of \$7,138,000,000, by 14 p.c. Early indications are that a further, but smaller, increase occurred in 1949. On the basis of preliminary information it is estimated that trade in 1949 was approximately \$7,700,000,000.

Expansion of Canada's retail trade was shared by each of the kinds of business reporting. Price changes undoubtedly accounted for a substantial part of the gains in several sectors where heavy increases were evident such as in food, departmental and variety merchandising outlets. Continued expansion in the construction industry helped produce the demand for lumber and building materials, which at retail level showed a substantial gain over the previous year.

Early 1949 figures indicate some slackening in consumer buying for personal goods and household durables, with food and lumber and building materials sales holding firm. With increased production of new motor-vehicles, the automotive trades absorbed a greater portion of the consumer dollar.

Retail merchants in all provinces enjoyed an increased volume of sales in 1948. Oil developments and supplementary grain payments in Western Canada helped to stimulate activity in the Prairie Provinces where the largest gains were to be found.

In Table 21 the analysis by kinds of business has been recently modified, as shown below, and does not correspond with the presentation given in earlier Year Books. Comparison for the years 1947 and 1941, however, has been made on a comparable basis.

**Chain Stores.**—Chain-stores sales in 1948 amounted to \$1,335,174,000, a gain of more than 13 p.c. over 1947, when sales volume was \$1,177,323,000. Sales in the average of 6,823 chain-store units made up 18 p.c. of all retail sales in Canada. Chain-store statistics are summarized in Tables 22 and 23.

**22.—Chain-Store Statistics, 1930 and 1941-48**

**New Motor-Vehicle Sales.**—Fewer new motor-vehicles were sold in Canada in 1948 than in 1947. The reduction in sales of new vehicles between 1947 and 1948 resulted from the decline in sales of new passenger cars. Sales of commercial vehicles did not fall off, but continued the gain of the previous year. In 1948 a total of 221,300 new passenger and commercial vehicles sold for \$439,216,988; in 1947, 230,255 units retailed for \$416,237,495. Total passenger car sales in 1948 numbered 145,655 units with a retail value of \$282,903,958 compared with the 1947 sales of 159,205 vehicles having a value of \$283,190,390. There were 75,645 new trucks and buses sold for \$156,313,030 in 1948, while 1947 volume was 71,050 units valued at \$133,047,105. Values used are prices actually paid by purchasers at point of manufacture, including sales and excise taxes, charges for standard accessories and dealers commissions, but excluding freight charges from factory to point of purchase.

On Mar. 23, 1949 the excise tax on passenger vehicles was reduced to 10 p.c. over and above sales taxes. In the first seven months of 1949, total sales of passenger vehicles were 52 p.c. over sales volume in the same period in 1948; sales of trucks gained 15 p.c. for a total increase of 37 p.c. Despite the lowering of the excise tax, the average sales value of new passenger cars in 1949 from January to July reached \$2,078 compared with \$1,942 in 1948 and \$1,779 in 1947.

**Farm Implement Sales.**—Sales of farm implements and equipment in Canada in 1948, as reported by manufacturers and importers mainly at wholesale prices, amounted to \$170,666,070, an increase of 39 p.c. over the 1947 volume of \$122,394,742. These figures do not include sales of parts, binder twine, motor trucks and machinery. Supplementary information indicated that the sales figures quoted at wholesale prices should be increased by 20 p.c. to bring them to a retail value. The estimated amounts spent by Canadian farmers, therefore, on new machinery and implements during 1948 was approximately \$204,000,000 compared with \$148,700,000 in 1947.

The volume of sales of repair parts at wholesale prices in 1948 was \$26,996,844, 16 p.c. above the \$23,276,162 reported for the year 1947. Applying an average mark-up of 31.6 p.c. to bring the figure to retail prices, the estimated retail value of repair parts sold in 1948 was approximately \$35,000,000 compared with \$30,562,000 in 1947.

#### 25.—Farm Implement and Equipment Sales, by Provinces, 1948

NOTE.—Values are mainly at wholesale prices.

<sup>1</sup> More than 100 p.c.

**Motion Picture Theatres.**—Motion picture theatres in Canada in 1948 numbered 1,950, an increase of 257 over the 1947 figure. Box office receipts were \$83,283,436, 6 p.c. above the 1947 volume of \$78,684,681; of this total, \$13,626,188 was paid in amusement taxes to the Federal and Provincial Governments.

Attendance at motion picture theatres during 1948 numbered 222,459,224, an increase of 1 p.c. over the 220,857,594 paid admissions of 1947. There were 12,916 paid employees in theatres, whose salaries and wages amounted to \$13,100,313, and 1,445 proprietors or family members.

The 1948 figures include 331 locations at which 16 m.m. equipment was used but exclude locations operated by itinerant exhibitors, drive-in theatres and theatres whose main revenue was derived from stage performances.

Receipts of 165 itinerant exhibitors amounted to \$428,303 with an additional \$58,768 being collected in taxes. Attendance numbered 1,532,820 at these performances given in 760 different towns.

Fifteen drive-in theatres with accommodation for 9,975 cars and attended by 1,595,947 persons were in operation in 1948. Gross receipts reported were \$789,765; of this amount, \$131,124 was paid in taxes.

The five theatres whose main source of revenue was stage productions had net receipts of \$1,196,016 in 1948 and collected an additional \$231,277 in taxes. Attendance at these theatres numbered 903,778. Comparable figures for the same five theatres in 1947 were: net receipts \$1,079,931 and attendance 702,611 persons.

**27.—Motion Picture Theatres and Receipts, by Provinces, 1930, 1941, 1947 and 1948**

NOTE.—Itinerant operators and legitimate operators are not included in these figures. Receipts are exclusive of amusement taxes.

<sup>1</sup> Subject to revision. The figures for this year include for the first time 104 parish and community halls licensed in Quebec: receipts from these amounted to \$148,377 for 522,557 paid admissions and amount of taxes paid was \$13,639.

**Power Laundries, Cleaning and Dyeing Establishments.**—There were 244 power laundries and 530 dry cleaning and dyeing operating plants in Canada in 1947. These two industries provided services to the value of \$59,043,678 during the year. Of the total receipts, 51 p.c. was for dry cleaning, 41 p.c. for laundry, 4 p.c. for linen rentals and 4 p.c. for other services.

<sup>1</sup> Includes salaried employees and wage-earners. In addition, there were 244 male and 15 female proprietors who received salaries of \$538,853 and 287 male and 23 female proprietors who received no regular salary in 1947. <sup>2</sup> Includes Yukon and Northwest Territories.

**Operating Results of Retail Chain Stores.**—Studies on operating results of retail-chain firms were undertaken for the first time in 1948, covering the year 1947. All firms in ten major trades were canvassed and results were published late in 1948. Statistics on gross and net profits in retail chains were collected during the 1930's but no detailed expenses were then available from the chain firms.

The first comprehensive study called for considerable detail of expenses, classified between head office and warehouse expense and store expense. Results were presented by chain-size groupings where there was a sufficient number of contributing firms and, where possible, an analysis of expenses between the functions of head office and warehouse and store expenses was also shown. The items of profit and expense were related to net sales and included the following: gross margin or profit; executive salaries; employees' salaries; employees' benefits; occupancy cost; taxes; repairs; depreciation; supplies used; heat, light and power; advertising; travelling expense; communication; bad debt loss; all other expense, income taxes (for incorporated firms); and net profit.

This study of retail chains and a similar one taken on the 1947 operations of certain major wholesale trades adds more data about the costs of distribution as provided by retailers and middlemen.

### 30.—Operating Ratios in Retail Chain Stores for Selected Kinds of Business, 1947

NOTE.—All figures except stock turnover are percentages of net sales.

Kind of Business	Cost of Goods Sold	Gross Profit	Total Operating Expenses <sup>1</sup>	Salaries and Wages <sup>2</sup>	Occupancy Expense <sup>3</sup>	Supplies Used	Net Profit Before Income Tax	Stock Turn-over Times per Year <sup>4</sup>

<sup>1</sup> Includes salaries and wages, occupancy expense, store supplies and all other expenses.

<sup>2</sup> Salaries

and wages include proprietors' salaries, executive salaries and employees' salaries and wages.

<sup>3</sup> Includes taxes, insurance, repairs, maintenance and depreciation on real estate, rentals paid for rented premises, and light, heat and power.

<sup>4</sup> Cost of goods sold divided by average of beginning and year-end inventories.

**Retail Consumer Credit.**—Studies on retail consumer credit were conducted by the Wartime Prices and Trade Board and results were compiled on five retail trades to June, 1945. In 1947, the Dominion Bureau of Statistics undertook the survey and results are now available on a quarterly basis. The sample of firms first used has been increased and improved and now covers 16 retail trades in which consumer credit purchasing is an important factor.

The combined results of these trades are presented in index form in Table 31 by three-month periods and show cash, instalment, and charge sales and instalment and charge accounts receivable at the end of each period. Sales are based on an average quarter of 1941 and receivables on the amount outstanding on the books of the sample firms at Dec. 31, 1941. The percentage composition of sales and receivables, and sales-receivables ratios and number of days credit outstanding are also shown.

These statistics portray the trend in cash and credit consumer purchasing at the retail level and measure the rise and fall in unpaid accounts on credit buying. They represent the average for respective trades by which the individual merchant may plan his own policy of extending credit.

**Statistics of Finance Companies.**—In 1948, there were 97 finance companies in Canada that participated in the financing of consumers, commercial and industrial goods. The total value of this financing amounted to \$208,000,000 in 1948, an increase of more than 19 p.c. over 1947, and more than twice the total of \$100,000,000 reported in 1941. The financing of commercial and industrial goods, although still exceeded in 1948 by the financing of consumer goods, has increased in importance as an activity of finance companies since 1941. Consumers' goods accounted for 77 p.c. of total sales financing in 1941, but these items accounted for only 48 p.c. in 1947 and 59 p.c. in 1948.

Balances outstanding on retail instalment paper purchased by sales finance companies amounted to about \$107,000,000 in 1947 as compared with \$65,000,000 in 1941, a gain of 61 p.c. In the same period total paper financed had gained 74 p.c. By 1948 balances outstanding had reached \$130,000,000 or double the 1941 figure. The 1941-47 gain resulted from the increase in commercial and industrial outstandings, while the 1948 increase was due to the heavy activity in consumer goods, largely consumer durables which were again back on the markets in quantity.

Results of the surveys for 1941, 1947 and 1948 are given in Tables 32 and 33.

Automotive sales financing makes up the major portion of the activities of finance companies. In 1941, automobile financing was 85 p.c. of the total, while in 1947 and 1948 the percentages were 62 p.c. and 70 p.c., respectively.

Monthly statistics on the financing of automotive commodities have been kept for about 20 years and Table 34 shows the trend since 1939. Figures in this table do not in all cases agree with those given in Table 32 because of minor inconsistencies in reporting on different occasions.

In the immediate post-war period, with cash reserves of consumers at a high level, a high percentage of car sales were made for cash. However, the proportion of vehicles financed has been gaining steadily as more and more vehicles become available. Table 35 shows a comparison of new passenger car sales and financing for specified years. In the first nine months of 1949 sales of new motor-vehicles financed was 28 p.c. of the total, a gain over the 1948 figure.

### Section 5.—The Co-operative Movement in Canada\*

For the crop year ended July 31, 1948, 2,249 co-operative business organizations reported on their operations. Membership recorded was 1,127,229 and total business amounted to \$780,084,955. These three figures are the highest reported since 1931. This year marks the first time that membership has been over 1,000,000 but it must be noted that in this figure there is much duplication since the same individual may and often does belong to more than one type of association.

The number of reporting co-operatives has increased since 1945 by over 400; total volume of business increased by \$195,000,000—an amount greater than the total business reported in 1938. During the same period sales value of farm products increased by \$116,000,000 and purchasing and distributing co-operatives reported an increase in sales volume amounting to \$76,000,000. In 1945, marketing volume was six times the business of the purchasing co-operatives and in 1948 this ratio had dropped to 4 to 1.

**Developments of Co-operatives, 1948-49.**—Evidence of growth and expansion among co-operatives can be noted from developments that took place in 1948.

Manitoba Pool Elevators acquired from a private company 20 country elevators in Manitoba, a feed grain plant at Portage la Prairie and a 3,500,000 bu. terminal at Port Arthur. As part payment a terminal of smaller capacity at Port Arthur was turned over to the private company and the remainder of the purchase price of these expanded facilities was provided by members' subscriptions.

Two instances of co-operatives moving into the field of manufacturing were reported. Interprovincial Co-operatives, Limited, began operating a bag factory in September, 1948, and at the beginning of 1949 regional wholesales were being supplied with bags from this co-operative-owned factory.

\* Prepared by J. E. O'Meara, Marketing Service, Economics Division, Department of Agriculture, Ottawa. The treatment of credit unions that formerly appeared here has been transferred to the Currency and Banking Chapter, see p. 1079.

The Saskatchewan Wheat Pool opened a new flour mill at Saskatoon. Built at a cost of \$3,500,000 this mill will have a capacity of 1,000 bbl. per day.

In the field of production certain co-operative wholesales have for the past few years owned and operated coal mines in Alberta. Recently, three western co-operative wholesales joined in the search for oil in western Canada and in August, 1948, the first co-operative oil well in Canada was brought in. Since that time seven more successful drillings have been made.

The Canadian Co-operative Implements, Limited, set up on a basis of membership through district associations and incorporated under federal charter, has now dissolved the district associations and has been incorporated under a special Act of the Province of Saskatchewan. This company is also registered in the other provinces where business is carried on. Its membership is now about 50,000 in the three Prairie Provinces. It distributes tractors, harvester combines, swathers, tiller combines, tractor mowers, disks, harrows, sleighs, wagon boxes, farm tools and hand implements. Machinery is sold through the local co-operative associations and direct to members when there is no local co-operative. Assembly is done at branches and service is provided by mobile field-service units equipped with all necessary tools and repair parts.

Another major reorganization among Canadian co-operatives took place in December, 1948, when the United Farmers' Co-operative Company, Limited, became United Co-operatives of Ontario. This organization has been the leading farm marketing and supply co-operative in Ontario since 1914. Organized first on a direct individual membership basis the new co-operative is now owned by its local associations.

Interprovincial Co-operatives, Limited, is a federation of eight Canadian regional wholesales, and was organized to consolidate the buying for regional member wholesales of all merchandise handled or arranged for. It may acquire and operate productive and manufacturing facilities and act as distributor for co-operative processing or manufacturing plants. In addition, it controls the "Co-op" label in Canada and safeguards the standards and specifications of goods sold under this label. For the year ended Oct. 31, 1948, Interprovincial Co-operatives, Limited, reported sales of nearly \$4,500,000.

**Marketing.**—The value of farm products marketed by co-operatives during the crop year ended July 31, 1948, amounted to \$616,347,477, an increase of \$37,709,263 over the total reported for the same period in 1947.

There has been very little change in the percentage of the main farm products in commercial trade handled by the co-operatives. In 1946-47 this change was estimated at 31 p.c. and for 1947-48 at 32 p.c. For the commodities concerned the percentages are as follows, with the previous year indicated in parentheses: dairy products, 22.6 (21.7); live stock, 18.5 (18.2); poultry and eggs, 18.6 (16.6); wool, 68.1 (72.9); grains, 56.2 (51.5); fruits and vegetables, 27.4 (32.1); maple products, 25.1 (11.7); tobacco, 99.0 (87.3); and honey, 6.0 (11.4).

Increases in sales of farm products were reported from all provinces except Nova Scotia, Ontario and Alberta. In Nova Scotia sales declined by over \$1,000,000, attributable to a smaller apple crop and to reduced prices for this commodity. The decrease in the Ontario volume of sales is the result of less complete returns compared with those of the previous year. More accurate reporting from Alberta resulted in lower figures for that Province as a whole since in the previous year sales values of some commodities were over-estimated. New Brunswick reported sales almost double the 1947 figure. This is accounted for by an increase in the

number of associations reporting; a rise in the prices for dairy products; and an increase in the numbers and prices of hogs marketed co-operatively. One new co-operative seed plant with a substantial volume was in operation for the first time during the year 1947-48.

**Merchandising.**—The reported sales volume of supplies and merchandise purchased by co-operatives for members and patrons amounted to \$157,874,045 in 1947-48 compared to \$127,001,488 in 1946-47—an increase of almost 24 p.c. The largest increase was noted in co-operatives handling food products, clothing, home furnishings and petroleum products. Farm machinery sales through co-operatives more than tripled. Feeds and fertilizer, the most important goods handled in terms of volume, increased in sales by approximately 25 p.c.

All provinces shared in the general increase in sales of merchandise with Quebec reporting an increase of about \$15,000,000. This, however, was the result of better coverage in that Province when over 100 purchasing co-operatives reported for the first time.

**Wholesaling.**—Every province, except Prince Edward Island, now has a provincial or regional wholesale that supplies the local co-operatives with farm requirements and consumer goods. These wholesales are federations of locals and are themselves federated into Interprovincial Co-operatives, Limited. In addition, seven are regional members of National Co-operatives, Incorporated, in the United States from which they obtain durable consumer and production goods such as washing-machines, radios, refrigerators, milking-machines, electric fences, batteries, tractor and automobile tires and other automotive accessories. Through Interprovincial Co-operatives, Limited, the provincial wholesales can obtain under a "Co-op" label salmon, jams, flour and other commodities such as twine, roofing, etc.

Ten co-operative wholesales reported for the year 1947-48. They served 1,650 member associations and reported total assets of \$17,395,214. Plant value, less allowance for depreciation, was \$3,941,515 and members' equity totalled \$7,683,100. Liabilities to members was only \$1,600,000 compared with liabilities to the public of \$9,712,114.

Total sales of merchandise during 1947-48 amounted to \$42,096,580 while the value of sales of farm products was \$52,316,972. The main product marketed was live stock with a sales value of \$26,301,943. The major items supplied to members by the wholesales were feeds and fertilizer, valued at approximately \$21,670,733. It is significant that while local co-operative retail stores reported sales of over \$37,000,000 in food products only \$3,700,000, or about 10 p.c., was supplied by the co-operative wholesales.

**Retailing.**—Total sales volume of co-operative retail stores (including branches) in Canada for the year 1947-48 was reported as \$74,687,177. Approximately 50 p.c. was accounted for by sales of food products while sales of feed and fertilizer ranked second in volume with sales of \$13,642,648. The number of stores reporting was 631, exclusive of branch outlets.

Sales of petroleum products through co-operatives amounted to \$7,879,409 and were made mainly in the three Prairie Provinces. Alberta alone reported sales of over \$3,000,000.

**Miscellaneous and Service Type Co-operatives.**—Reports were received from 68 service co-operatives and covered co-operative activity in transportation, medical services, automobile and electrical repairs, restaurants, boarding-houses,

funeral services, housing and recreation. Total membership was reported to be 19,049 and total revenue from services rendered amounted to \$1,737,966.

In addition, there are many co-operatively-owned community halls and recreation centres throughout Canada. In Saskatchewan there are community pastures, co-operative farms, machinery co-operatives and co-operatives for the production of sheep, hogs, honey and fur.

Many of Canada's telephone systems are classed as co-operatives and the Dominion Bureau of Statistics recorded 2,318 such systems in 1947-48 with a total investment of \$22,751,436.

### 36.—Summary Statistics of Co-operative Business Organizations, Crop Years Ended July 31, 1943-48

<sup>1</sup> Includes other revenue.

**Co-operative Insurance.**—Farmers' mutual fire insurance companies are the oldest form of co-operative insurance in Canada. Net admitted assets for 1947 were \$22,300,000, net amount of insurance carried was \$1,835,000,000 and net claims paid in 1947 amounted to \$5,284,544.

The Co-operative Life Insurance Company obtained a Federal charter in 1947 and extended its operations into Ontario, Manitoba, Saskatchewan and Alberta and has applied for a licence to operate in New Brunswick. As at Dec. 31, 1948, insurance in force totalled \$17,327,351.

**Fishermen's Co-operatives.**—Co-operative marketing of fish was reported by 87 associations during 1947-48. These associations are located mainly in the Maritime Provinces and Quebec but there are indications of interest in co-operative organization among fishermen who operate on inland waters in Ontario, Manitoba and Saskatchewan.

Total membership in the reporting fishermen's co-operatives was 12,766 and the value of fish sold was \$14,940,017. Most fishermen's co-operatives also handle gear, bait, etc., but on the Pacific coast the provision of consumer goods to members is a considerable item. Reported sales value of supplies sold during 1947-48 amounted to \$1,979,379.

**The Co-operative Union of Canada.**—Organized for the protection and promotion of the co-operative movement, the Co-operative Union of Canada celebrated its 40th anniversary in March, 1949.

It is organized on a basis of local unions in each province and its statistical summary for the year 1947-48 reported a membership of 922 associations representing a total individual membership of 628,745 and business amounting to \$472,954,035.

Le Conseil Canadien de la Coopération represents in a similar manner French-speaking co-operators throughout the country and has provincial sections organized in several provinces.

### Section 6.—Food Consumption\*

**Consumption of Major Foods.**—A study of consumption of the major foods was undertaken during the war years by the Agricultural Division of the Bureau of Statistics in recognition of the national and international significance of such information. While data on total consumption of certain commodities such as wheat, alcoholic beverages, meats, etc., have been available for a considerable period, it was found necessary to establish a per capita level of consumption of a wide range of products on a comparable basis.

The figures represent available supplies including production and imports, adjusted for change of stocks, exports, marketing losses and industrial uses. All calculations have been made at the retail stage of distribution, except meats for which the figures are worked out at the wholesale stage. The amounts of food actually eaten would be somewhat lower than indicated because of losses and waste occurring after the products reached the hands of the consumer. It should also be pointed out that there are minor discrepancies in certain of the figures since statistics of storage stocks in the hands of retailers and consumers were not available. In the main, however, the figures represent the best summary of food consumption data that has been compiled for Canada.

All basic foods have been classified under 13 main commodity groups. Totals for each group have been computed using common denominators for the group, as for example: milk solids (dry weight) in the case of the dairy-products group; fat content in the case of fats and oils; and fresh equivalent in the case of fruits. All foods have been included in their basic form, that is, as flour, fat, sugar, etc., rather than in more highly manufactured forms.

The series in Table 39 represents the official estimates of yearly supplies of food moving into consumption, expressed in pounds per capita, for the years 1935-39 as an average for comparison with the post-war years 1947 and 1948. (The estimates for 1948 are subject to revision.)

\* Prepared in the Agriculture Division, Dominion Bureau of Statistics.

#### 39.—Per Capita Supplies of Food Moving into Consumption, 1947 and 1948, with Averages, 1935-39

NOTE.—Many figures in this table have been revised since the publication of the 1947 Year Book, due to the regrouping of component items of certain groups.

**Consumption of Meats.**—The supply, distribution and per capita consumption of meats and lard are given in detail in Table 40. The per capita estimates represent the consumption of the civilian population only. In order to arrive at a proper comparison of meat consumption during 1940-45 with the years before the War, figures of supply were revised to compensate for amounts of meat used for non-civilian purposes. These deductions included purchases by the Department of Munitions and Supply for the Army, Navy and Air Force, supplies for ships' stores, Red Cross parcels and other similar uses.

The Canadian population figures used to arrive at the per capita consumption estimates were also adjusted for the members of the Armed Forces serving outside Canada and living in barracks in Canada. All estimates in Table 40 are on a carcass weight basis except canned meats which are in terms of the product.

<sup>1</sup> 1948 figures subject to revision.    <sup>2</sup> Edible meat excluding offal.    <sup>3</sup> Basis cold dressed carcass weight.  
<sup>4</sup> Includes edible offal of beef and veal.    <sup>5</sup> Quantity small; included with beef.  
<sup>6</sup> Edible meat excluding fats and offal.    <sup>7</sup> The positive changes represent deductions from the available supply during a given year and therefore are subtracted; similarly, negative changes represent an increase in disappearance. Where no changes are indicated it is assumed that stocks at the beginning and end of period were the same.    <sup>8</sup> Estimated.    <sup>9</sup> Includes rendered pork fat.

### Section 7.—Interprovincial Freight Movements\*

Statistics on interprovincial trade are difficult to collect because there are no barriers to this trade. The only comprehensive statistics available are the loadings and unloadings of freight carried by the railways. The railway traffic is segregated into 76 classes of freight and the differences between loadings and unloadings are the imports and exports *by rail* for the respective provinces. Freight can, however, be imported by rail and exported by water, as is the case with western grain moved to the Ontario ports of Fort William and Port Arthur. Consequently, the statistics of Table 41 must not be taken as a measure of total interprovincial trade: they indicate only the interprovincial movement of railway freight which is one aspect of that trade.

\* Revised in the Transportation Division, Dominion Bureau of Statistics.

<sup>1</sup> Figures for freight originating and freight terminating do not agree because that freight which originates within a certain year does not all terminate within the same year. On the other hand, some that terminated in 1948, for instance, originated within the previous year.

## PART II.—GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE

### Section 1.—Controls Affecting Distribution and Trade, 1948-49

A detailed account concerning controls affecting distribution and trade for 1948-49 will be found at pp. 983-985 of this edition.

### Section 2.—Trade Standards\*

The Standards Division of the Department of Trade and Commerce was created in the latter part of the fiscal year 1946-47, and provided for the consolidation of several important services and for the administration, under one director, of the Electricity Inspection Act, the Gas Inspection Act, the Electricity and Fluid Exportation Act, the Precious Metals Marking Act, and the Weights and Measures Act.

\* Prepared under the direction of R. W. MacLean, Director, Standards Division, Department of Trade and Commerce.

### **Subsection 1.—Commodity Standards**

On Nov. 26, 1949, Parliament passed the National Trade Mark and True Labelling Act which provides a framework for the development of the National Standard and true labelling, to circumvent public deception in advertising.

In brief, the use of the National Standard is voluntary, and compliance with commodity standards affects only those manufacturers who desire to use the national trade mark. In addition, where manufacturers descriptively label any commodity or container, it must be labelled accurately to avoid public deception. One such regulation of interest applies to the labelling of fur garments, and has established itself as a code of fair practice throughout the merchandising field.

Under the terms of the Precious Metals Marking Act, 1946 (c. 26), commodities composed of gold, silver or platinum may be marked with a quality mark which accurately describes the quality of the metal. Where such mark is used, a trade mark registered in Canada, or for which application for registration has been made, must also be applied. Gold-plated, silver-plated or platinum-plated articles may also be marked under certain conditions outlined in the Act. The inspection staff of the Standards Division is engaged in the examination of advertising matter, in verifying the quality of articles offered for sale and in checking the marks applied.

### **Subsection 2.—Weights and Measures**

The Weights and Measures Act prescribes the legal standards of weight and measure for use in Canada. Responsibilities under the Act require control of the type of all weighing and measuring devices used for commercial purposes, their periodic verification and surveillance directed towards the elimination of sales by short-weight or short-measure.

The number of inspections made in the fiscal year 1947-48 was 705,835, compared with 717,864 in 1946-47. The more important of these comprised the following: weighing machines, including scales of all kinds, 233,851; measuring machines for liquids, 66,427; other weights, 136,602; other measures, 268,955.

Total expenditures were \$500,262 in 1947-48 compared with \$454,702 in 1946-47. Total revenues were \$476,926 and \$453,482, respectively, for the two years.

### **Subsection 3.—Electricity and Gas Inspection**

Responsibilities of the Standards Division under the Electricity Inspection Act and the Gas Inspection Act comprise the control of the types of electricity meters and gas meters used throughout Canada, and the testing and stamping of every meter used for billing purposes, the object being to ensure the correct measurement of all electricity and gas sold. For the administration of these two Acts, Canada is divided into three divisions and twenty districts, and the total staff is 145. During the year ended Mar. 31, 1948, 805,394 electricity and gas meters were tested as compared with 628,148 in the preceding year. Revenue derived from the testing amounted to \$555,222 and expenditures to \$402,021.

## 1.—Electricity and Gas Meters in Use, Years Ended Mar. 31, 1939-48

Year	Electricity Meters	Gas Meters				Total
		Manu- factured	Natural	Acetylene	Petroleum Gas	
	No.	No.	No.	No.	No.	No.
1939.....	1,964,729	512,373	179,988	3	1,224	693,588
1940.....	2,037,563	514,170	185,499	3	1,184	700,856
1941.....	2,109,437	519,095	192,097	4	1,157	712,353
1942.....	2,181,945	524,669	197,781	4	1,196	723,650
1943.....	2,228,716	532,160	197,585	4	1,278	731,027
1944.....	2,268,500	540,240	201,522	4	1,392	743,158
1945.....	2,348,150	552,411	208,046	4	1,529	761,990
1946.....	2,459,672	550,949	215,330	4	1,651	767,934
1947.....	2,647,040	560,046	225,952	4	1,725	787,727
1948.....	2,746,685	587,629	217,068	3	1,046	805,746

The Electricity and Fluid Exportation Act came into force in 1907. Under its provisions no electric energy or fluid, whether liquid or gaseous, may be exported from Canada without a licence. Total exports of electric energy during the year ended Mar. 31, 1948, amounted to 2,025,189,526 kilowatt hours. There was also a small exportation of natural gas.

## Section 3.—Combinations in Restraint of Trade\*

Federal legislative measures for aiding and regulating trade include specific prohibitions of operation against the public interest by monopolies and similar commercial combinations. Monopolistic trade arrangements tending to eliminate competition in price, supply or quality of goods, and thereby to restrain trade unduly, are illegal under laws including the Combines Investigation Act and Section 498 of the Criminal Code. These laws are designed to promote reasonable competitive opportunities for the expansion of production, distribution and employment.

The first federal legislation in this field was enacted in 1889 and is still effective in amended form as Section 498 of the Criminal Code. Legislation providing for investigation of trusts or combines was first enacted in 1897 as part of the Customs Tariff Act. In 1910 a separate Combines Investigation Act was provided and further legislation was enacted in 1919 and 1923.

**The Combines Investigation Act.**—The Combines Investigation Act (R.S.C. 1927, c. 26, as amended in 1935, 1937 and 1946) provides for investigation of trade combinations, mergers, trusts and monopolies alleged to have been formed or operated in restraint of trade and to the detriment of the public. Organizations or commercial arrangements of this class which operate to the detriment of the public by enhancing prices, fixing common prices, restricting competition, limiting production or otherwise restraining or attempting to restrain trade, are defined in the Act as 'combines'. Participation in the formation or in the operation of a combine is an indictable offence, subject to penalties up to \$25,000 or two years' imprisonment. Investigations of alleged combines under the Act are conducted under the direction of the Combines Investigation Commissioner who reports to the Minister of Justice.

\* Revised by F. A. McGregor, Commissioner, Combines Investigation Act, Department of Justice, Ottawa.

The maintenance of a competitive economy in Canada as a matter of public policy was reaffirmed by Parliament in amendments made to the Combines Investigation Act in 1946, whereby some of the recommendations made in the report "Canada and International Cartels" were given legislative form. This legislation of 1946 authorized the Commissioner to receive and investigate complaints respecting practices alleged under Section 498 and 498A of the Criminal Code to be offences related to those covered by the Combines Investigation Act. It also authorized the Commissioner to proceed on his own initiative with an inquiry to determine whether a combine exists or is being formed. A similar provision had been contained in the legislation from 1923 to 1937. The amending Act of 1946 also empowered the Exchequer Court to prevent by court order certain uses of patents or trade marks in undue restraint of trade.

An alleged combine in the manufacture and sale of dental supplies was reported by the Commissioner in July, 1947. Eighteen member companies were indicted by a Grand Jury at Toronto, Ont., for conspiracy in undue restraint of trade. A verdict of not guilty was brought in on Mar. 18, 1948, on the ground that the evidence submitted by the Crown had not been adequately authenticated. The Crown appealed from this verdict to the Ontario Court of Appeal which dismissed the appeal on technical grounds in a judgment delivered on Feb. 28, 1949. In sustaining the ruling of the trial judge the Appeal Court held, among other things, that where no one else but companies are charged, the criminal acts charged must be brought home to the companies as their acts. The proof required in the case of companies, the Court ruled, differs somewhat from that required in the case of individuals and there must be evidence when an act by an officer, servant or agent of a company is relied on that he had authority from the company to act. As the judgment of the Ontario Court of Appeal raised very serious problems in the matter of proof of offences in undue restraint of trade the Minister of Justice directed that consideration be given to its effects by officials of the Department and Crown Counsel. It was subsequently announced that the Government was giving consideration to a draft Bill to amend the statute.

An investigation into the manufacture and sale of optical goods resulted in a finding in April, 1948, that a combine existed among certain manufacturers and wholesalers of optical goods, whereby a system of patent licensing had been instituted by the principal manufacturer under which minimum resale prices were established at each stage of distribution for all but a small proportion of the types of spectacles and their parts in popular demand. Other arrangements were entered into by the parties to the alleged combine to eliminate competition in other ways. Of the seven basic patents involved one has expired, four were held invalid and judgment in respect of two others had not been delivered at the end of September, 1949. The restrictive licensing arrangements described in the Commissioner's report as affecting retailers and manufacturers of optical goods, and some of those affecting wholesalers, were cancelled before the investigation was concluded. Immediately after publication of the report, all remaining licensing restrictions complained of were withdrawn by the companies concerned. The use of the trade marks also has been so modified as to remove the restrictive features.

A special commissioner was appointed to conduct an investigation into an alleged combine in the bread-baking industry in the Provinces of Saskatchewan, Alberta and British Columbia and a report submitted in November, 1948, stated that, in his opinion, five bread-baking companies operating in these Provinces and

two bakers' associations in Alberta and British Columbia were, contrary to the Act, parties to the formation or operation of a combine referred to as the Western Chain Bakeries. This Chain produced approximately three-quarters of the bread sold in the three provinces. Price competition had been lessened by agreements to fix wholesale and retail prices, to maintain resale prices to consumers, to provide for uniform tenders on military and other contracts, to fix the price of bread shipped across the Saskatchewan-Alberta boundary and to divide territory within the Province of Alberta. The Attorney General appointed counsel in Alberta to undertake prosecution of members of the alleged combine.

Several other major investigations at varying stages of completion were in progress in the autumn of 1949. Preliminary inquiries were disposed of in many cases and in other instances features of trade programs which, if put into effect, might have led to question under the Combines Investigation Act, were abandoned.

### Section 4.—Patents, Copyrights and Trade Marks\*

Letters patent are issued subject to the provisions of the Patent Act, 1935 (25-26 Geo. V., 1935, c. 32, as amended by 11 Geo. VI, 1947, c. 23), and applications for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa.

#### 2.—Patents Applied for, Granted, etc., Years Ended Mar. 31, 1944-49

Item	1944	1945	1946	1947	1948	1949
Applications for patents..... No.	11,227	12,672	14,778	16,922	16,585	12,751
Patents granted..... "	7,803	7,084	7,412	6,590	7,175	7,959
Granted to Canadians..... "	480	486	495	520	580	570
Caveats granted..... "	223	302	421	438	313	331
Assignments..... "	7,857	8,265	8,964	11,063	13,656	13,325
Fees received, net..... \$	366,254	388,593	421,539	452,193	631,929	625,451

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to a peak of 12,542 in 1923 and has remained between 6,500 and 8,500 for the past ten years. Of the 7,959 patents granted in 1948-49, 5,964 or 75 p.c. were from inventors resident in the United States, 570 from Canadian residents, 978 from residents of the United Kingdom and other British Dominions, Colonies and Protectorates, while residents of Switzerland obtained 79, of France 122, of the Netherlands 41, of Sweden 77, of Germany 34 and of other countries 94.

The year ended Mar. 31, 1949, showed a marked increase over previous years in many classes of invention. Applications in the fields of chemistry and electricity were most numerous.

In the former, artificial resins, processes of polymerization, dyes, additives to oils for use as lubricants, plasticizers, insecticides and therapeutic substances were the subject matter of many applications. In electrical and radio communication the trend was towards pulse code modulation, colour television, wave guides, refinements in amplifiers, pulse transmission and telemetric systems. In electronics,

\* The material relating to patents and copyrights has been revised by J. T. Mitchell, Commissioner of Patents, and that relating to trade marks by J. P. McCaffrey, Registrar of Trade Marks, Ottawa.

development of computing machines and the use of high frequency heating continued. Applications for welding and heating, vapour lamps and starting means, arc quenching for circuit breakers, cables and electroplating were also numerous.

In metallurgy, invention was directed to new alloys and the processing of ores; in aeronautics, to automatic pilot controls and jet propulsion engines; in agricultural fields, to milking machines, hitches and tractor operated controls for farm machinery; in mining, to drilling muds, drill bits and mounts; in photography and optics to colour sensitizing emulsions, photometers and motion-picture apparatus; in material handling, to snow ploughs, conveyers, logging systems, excavating and loading vehicles; in building construction, to concrete blocks and slabs and prefabricated houses and in amusement and like devices, to games, toys, skis, hockey sticks and fish baits.

Increased attention has been directed to such diversified inventions as button-sewing machines, ash trays, chain saws, awnings, venetian blinds, display boxes, loose-leaf binders, windshield wipers, suction cleaners, fish-dressing machines, razor-blade dispensing packages, gauges, cigarette lighters, flashlights, pipe couplings, transmissions and others.

**Copyrights, Industrial Designs and Timber Marks.**—Registration of copyright is governed by R.S.C., 1927, c. 32, and applications for protection relating to copyrights should be addressed to the Commissioner of Patents, Ottawa.

The Copyright Act of 1921 (consolidated in R.S.C., 1927, c. 32) sets out, in Sect. 4. the qualifications for a copyright and, in Sect. 5, its duration: "Copyrights shall subsist in Canada... in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol... or resident within His Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death".

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection throughout all parts of His Majesty's Dominions, foreign countries of the Copyright Union, and the United States of America, as well as in Canada.

Protection of industrial designs and of timber marks is afforded under the Trade Marks and Design Act (R.S.C., 1927, c. 201) and amendments, and the Timber Marking Act (R.S.C., 1927, c. 198) and amendments. Registers of such designs and marks are kept under the Copyright Branch of the Patent Office, and information regarding them is published in the Canadian "Patent Office Record".

### 3.—Copyrights, Industrial Designs and Timber Marks Registered, Years Ended Mar. 31, 1943-48

**Trade Marks and Shop Cards.**—The Trade Marks Office, a Branch of the Department of the Secretary of State, is charged with the administration of the Unfair Competition Act, 1932, which repealed all previous Acts governing trade marks, and also with the Shop Cards Registration Act, which came into force on Sept. 1, 1938. Applications for registration of trade marks and shop cards should be addressed to the Registrar, Trade Marks Office, Ottawa.

A Register of Trade Marks is kept, in which, subject to the provisions of the Act, any person may cause to be recorded any trade mark he has adopted, and notification of any assignments, transmissions, disclaimers and judgments relating to such trade mark. In order that the public may be kept informed in the matter of trade-mark registration, a list of marks registered appears in the Canadian "Patent Office Record" which is issued weekly.

The Shop Cards Registration Act is designed to afford a measure of protection to organizations, such as trade unions, that formerly were able to register their particular designations as Union Labels under the Trade Mark and Design Act. Registrations under the Act may be renewed every 15 years.

### Section 5.—Bounties, Subsidies and Subventions

In 1930 the Federal Parliament passed legislation entitled "An Act to place Canadian Coal Used in the Manufacture of Iron or Steel on a Basis of Equality with Imported Coal" (20-21 Geo. V, c. 6). In implementation of this Act bounties paid in the calendar year 1948 amounted to \$352,514 on a tonnage of 712,150.

The Domestic Fuel Act 1927 (17-Geo. V, c. 52) was passed to encourage the production of domestic fuel from coal mined in Canada. Under its provisions arrangements were made for annual payments to manufacturers of coke who used Canadian mined coal to the extent of 70 p.c. of the total coal used. In the administration of this Act \$11,392 was paid in subsidies on 11,392 tons in the calendar year 1948. This Act has now expired and the amount noted is the final payment under the provisions of the Act.

Subventions were paid on movements of coal under assisted rates as provided by Parliament as follows:—

<i>Province</i>	<i>Tons</i>	<i>Amount</i>
	No.	\$
Nova Scotia.....	1,403,306	954,846

TOTALS.....	1,724,153	1,620,485

## Section 6.—Control and Sale of Alcoholic Beverages\*

The provincial liquor control Acts have been framed to establish provincial monopolies of the retail sale of alcoholic beverages, with the practical elimination of private profit therefrom. Partial exception is made in the retail sale of beer by brewers, or others which certain provinces permit, while reserving regulative rights and taxing such sales heavily. The provincial monopoly extends to the retail sale and not to the manufacture of alcoholic beverages. The original liquor control Acts have been modified from time to time as deemed advisable.

During the war years, restrictions were placed on the manufacture, advertisement, importation and sale of alcoholic beverages. These are outlined at p. 586 of the 1946 Year Book.

The distilled liquor industry produces not only beverage spirits, but also industrial alcohol as (1) unmatured, denatured by distillers, used in anti-freeze and numerous other items, and (2) unmatured, non-denatured, used in chemical compounds, pharmaceutical preparations and vinegar. Production of denatured alcohol was 5,778,978 pf. gal. in 1948, a decrease of some 2,314,281 pf. gal. from 1947. Non-denatured industrial alcohol reached an abnormal production of 17,824,944 pf. gal. in 1944, due to war needs, but by 1948 production had declined to 3,300,794 pf. gal.

Beverage spirits produced and placed in bond for maturing totalled 16,853,384 pf. gal. in 1947, with 17,211,972 pf. gal. in 1948.

Materials used showed important changes. Wheat was the major item during the War but in 1948, due to restrictions resulting from world food problems, consumption declined to only 4,387,794 lb. from a peak of 402,535,232 lb. in 1944. Corn replaced wheat, increasing from 15,833,741 lb. in 1944 and 45,191,740 lb. in 1945 to 195,640,173 lb. in 1948. Wheat flour (alcomeal), introduced during the War and consumed to the extent of 77,268,410 lb. in 1944, ceased to be of importance.

**Net Revenue from Liquor Control.**—The provincial figures of net revenue shown in Table 5, include not only the net profits made by Liquor Control Boards or Commissions, but also additional amounts of revenue received for permits, licences, etc., sometimes paid direct to Provincial Governments. The Federal Government, for the year ended Mar. 31, 1948, also collected in excise duties, customs duties, excise taxes, licence fees, etc., \$84,944,648 on spirits; \$57,534,701 on malt and malt products and \$2,921,811 on wines.† Corresponding collections for the year ended Mar. 31, 1949, were: \$79,401,370 on spirits; \$59,693,050 on malt and malt products and \$2,639,966 on wines.

\* In the main this material has been abridged from the report "The Control and Sale of Alcoholic Beverages in Canada", Dominion Bureau of Statistics, Price 50 cents. This report gives an outline of federal and provincial legislation concerning the control and sale of alcoholic beverages.

† These figures do not include sales tax, details of which are not available for separate commodities.

### 5.—Total Net Revenue Received by the Provincial Governments from Liquor Control, by Provinces, 1940-48

NOTE.—These figures are for provincial fiscal years ended on the following dates: N.S., Nov. 30; N.B., Oct. 31; Que., Apr. 30, 1940, Mar. 31, 1941 (11 months), Mar. 31, 1942-48; Ont., Mar. 31; Man., Apr. 30, 1940-46, Mar. 31, 1947 (11 months), Mar. 31, 1948; Sask., Apr. 30, 1940-46, Mar. 31, 1947 (11 months), Mar. 31, 1948, Alta., Mar. 31; and B.C., Mar. 31.

Year	Nova Scotia	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia

1947.....	8,245,687	6,879,632	29,715,052	34,998,052	6,527,122	8,104,620	9,705,075	14,725,990
1948.....	8,153,544	6,606,291	28,073,133	36,807,803	6,989,096	7,920,528	9,971,205	16,598,430

**Apparent Consumption of Alcoholic Beverages.**—Accurate measurement of the consumption of alcoholic beverages by Canadians is practically impossible. Temporary additions to the resident population through tourist travel are, at certain seasons, extremely large. In 1948, for example, more than 25,000,000 visitors crossed the international boundary into Canada. Sales of alcoholic beverages to certain of these visitors undoubtedly reached considerable proportions. Precise measurement is impossible since no separate record is kept of sales to non-residents of Canada.

In Tables 6, 7 and 8 an attempt is made to indicate the apparent consumption in Canada of spirits, beer and wine, respectively, on the basis of the quantities produced, imported, exported, etc. It should be noted that these figures take no account of increases or decreases in the quantities held in stock by the Boards or by licensees. For instance, the Boards may, in certain years, buy heavily to replenish stocks or create reserves; such purchases would unduly weight the consumption figures for those years.

Practically the total production of spirits is placed in bonded warehouses whence it is released for various purposes. The quantities shown in Table 6 as entered for consumption are released from warehouses, duty paid, presumably for consumption for beverage purposes in Canada.

Only a small part of the output of beer is placed in warehouses. The available supply, as shown in Table 7, is therefore made up of (1) production; (2) changes in warehouse stock; and (3) imports.

The apparent consumption of native wines as shown in Table 8 is obtainable by dividing the rates of excise tax into the total tax collections.

**6.—Apparent Consumption of Beverage Spirits, Years Ended Mar. 31, 1940-49**

NOTE.—Figures for the years 1924-39 are given at p. 532 of the 1941 Year Book.

1949.....	4,360,914	1	2,474,076	1,735	1	6,833,255

<sup>1</sup> The large quantities of non-potable alcohol produced and exported for war uses in the years 1943-45 necessitated a change in the method of estimating the consumption of beverage spirits. The exports in bond and the domestic exports do not now enter into the calculations. Details of the change are given in the Dominion Bureau of Statistics report "The Control and Sale of Alcohol Beverages in Canada".

### PART III.—COMMERCIAL FAILURES

According to Sect. 91 of the British North America Act, "the exclusive legislative authority of the Parliament of Canada" extends to bankruptcy and insolvency legislation, and an Insolvency Act (32-33 Vict., c. 16) was passed by the Federal Parliament in 1869, and applied to the four original provinces. This Act was renewed by c. 46 of the Statutes of 1874. In 1875 a new Insolvency Act (38 Vict., c. 16) applicable to the whole Dominion was passed, but was repealed in 1880. After this there was no federal legislation on the subject of bankruptcy until 1919. During the interval of nearly 40 years commercial failures were handled under provincial legislation, and the statistics relating to such failures during this period were compiled and published by two commercial agencies, R. G. Dun and Company and the Bradstreet Company. Statistics of commercial failures dealt with under the Dominion Bankruptcy Act of 1919 have been compiled and published by the Dominion Bureau of Statistics since 1920. (See pp. 895-896.)

The three Sections of this Part, although closely related as far as subject matter is concerned, cover different aspects of the field and the statistics presented in each Section are not comparable.

Statistics of industrial and commercial failures in Canada, given in Section 1, are compiled by Dun and Bradstreet, Incorporated. This mercantile agency is interested primarily in credit information, and it is not to be expected that their figures would be compiled on the same basis as those of the Dominion Bureau of Statistics or the Superintendent of Bankruptcy. These statistics include bankruptcies in general, insolvencies under provincial companies' Acts and such proceedings as bulk sales, bailiffs' sales, landlords' seizures, etc., when loss to creditors results. On the other hand the statistics do not include assignments of farmers (under the Farmers' Creditors Arrangement Act) or of wage-earners, so that, as a general rule, the totals run lower than those in Section 2. As pointed out, between 1875 and 1919 the agencies, now Dun and Bradstreet, Incorporated, were the only source of figures of commercial failures and their statistics have an added value because they present an unbroken historical series, though not on a comparable basis since 1934 (see text preceding Table 1). Dun and Bradstreet, Incorporated, have ceased to publish statistics of assets since 1940.

Section 2, on the other hand, is limited to bankruptcies and insolvencies made under federal legislation, such as the Bankruptcy Act (including the Farmers' Creditors Arrangement Act), the Winding Up Act and the Companies' Creditors Arrangement Act, but not failures, sales, or seizures carried out apart from such federal legislation. The Dominion Bureau of Statistics figures include failures of individuals such as wage-earners and farmers.

A word should be added about the value to be placed upon figures of assets and liabilities. Such values are estimates made by the debtor and, unfortunately, are not made uniformly. The human equation enters into them to a considerable degree and they must be accepted with this qualification.

Section 3 is limited to the administration of bankrupt estates by the Superintendent of Bankruptcy, under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act). This Section, however, gives definite information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can, therefore, be assumed that this applies in even greater degree to the more extended fields covered in Sections 1 and 2.

## Section 1.—Industrial and Commercial Failures from Private Sources

A historical table giving failures for Canada and Newfoundland, by classes, for the years 1915 to 1935 is given at p. 969 of the 1936 Year Book. Early in 1936, Dun and Bradstreet, Incorporated, from whose reports these figures were taken, adopted a new method of classification. The principal changes consisted of setting up a new group of construction enterprises previously included in manufacturing and a new class for commercial service. Real estate companies, holding, and other financial companies and agents of various kinds, were omitted. These changes have had the effect of confining the failure records more to industrial and commercial lines of activity, and liabilities are reduced more in proportion to the number of failures since the companies eliminated usually ran high in indebtedness. The figures in Table 1, which are available back to 1934, are therefore not comparable with the earlier series and are for Canada exclusive of Newfoundland, which did not enter Confederation until 1949.

### 1.—Industrial and Commercial Failures in Canada, by Classes, 1940-47, and by Provinces, 1948

(From Dun and Bradstreet, Incorporated)

<b>Totals, 1948.....</b>	<b>158</b>	<b>6,734</b>	<b>62</b>	<b>1,395</b>	<b>198</b>	<b>2,278</b>	<b>48</b>	<b>899</b>	<b>27</b>	<b>449</b>	<b>493</b>	<b>11,755</b>

In 1948, Quebec and Ontario accounted for 66 p.c. and 20 p.c., respectively, of the total failures. As regards liabilities, Quebec accounted for 66 p.c. of the total as compared with 20 p.c. registered for Ontario.

According to Dun and Bradstreet, Incorporated, the number of commercial failures during the war years 1939-45 showed a steady decrease year by year, and, whereas before the War the great majority of failures were in retail trading establishments, the proportion in that group also showed a steady decrease during those years. Since the end of the War, however, the number of failures has shown

substantial increases amounting to 134 p.c. in 1947 over 1946 and 62 p.c. in 1948 over 1947. Each group contributed to the advance in 1948, though over 60 p.c. of the increase was accounted for by retail trade.

## 2.—Industrial and Commercial Failures, by Divisions of Industry, 1946-48

## Section 2.—Commercial Failures as Compiled by the Dominion Bureau of Statistics

Under the Bankruptcy and Winding Up Acts (R.S.C. 1927, cc. 11 and 213), certain documents relating to estates administered under these Acts have, since July, 1920, been forwarded to the Dominion Statistician for statistical analysis. However, changes in the Acts effective in 1923 affected the comparability of the figures for 1921 and 1922, the two earliest full years for which statistics were compiled. The series, therefore, begins with 1923, except for the analysis by branches of business, in which case 1924 was the first year in which statistics were compiled. The statistics of this Section cover all bankruptcies and insolvencies that come under federal legislation, including assignments of individuals and farmers.

## Section 3.—Administration of Bankrupt Estates

The administration of bankrupt estates is supervised by the Superintendent of Bankruptcy (appointed in 1932) with the object of conserving as far as possible the assets of bankrupt estates for the benefit of the creditors.

## 7.—Assets, Liabilities, Assets Realized and Costs of Administration in Bankrupt Estates Closed, 1937-47, and by Provinces, 1948

(Source: The Annual Report of the Superintendent of Bankruptcy)

NOTE.—Figures for the years 1933-36 are given at p. 846 of the 1947 Year Book.

<sup>1</sup> Exclusive of assets realized direct by secured creditors. The amounts so realized for the last 7 years were approximately as follows: \$2,596,068 in 1942, \$1,709,722 in 1943, \$1,201,289 in 1944, \$1,811,803 in 1945, \$684,039 in 1946, \$582,811 in 1947 and \$1,597,781 in 1948.

<sup>2</sup> Exclusive of the city shown separately.

The Farmers' Creditors Arrangement Act came into effect Sept. 1, 1934. This Act was amended in 1935 and 1938 and was repealed and replaced by the Farmers' Creditors Arrangement Act, 1943. Assignments are made only in those cases in which the farmers are hopelessly insolvent and, in many cases, the assignments follow the rejection of proposals submitted to the creditors. Receiving orders are made only in cases in which the farmers have failed to fulfil the terms of their proposals as accepted by the creditors and approved by the court. Table 8 shows only statistics of estates closed by assignments or receiving orders and does not indicate the proposals that have been approved and are being carried out under the Farmers' Creditors Arrangement Act. For the year 1948 only the Provinces of Quebec, Ontario and Saskatchewan reported assignments.

**8.—Assets, Liabilities, Assets Realized and Costs of Administration in Estates Closed by Assignments or Receiving Orders under the Farmers' Creditors Arrangement Act, 1938-47, and by Provinces, 1948.**

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The subject of foreign trade covers more than treatment of imports and exports of commodities, important though this is. In its broader sense, it is made up of the total international exchanges of goods, services, securities and other financial exchanges all of which are presented in their proper relationship in the three Parts of this Chapter. Part I gives detailed statistics of external commodity trade. Part II summarizes external transactions from a standpoint of the balance of international payments. Part III outlines the various ways in which the Government promotes and encourages trade relationships, and reviews as well the Canadian tariff structure.

## Review of Foreign Trade

### Review of World Trade, 1948-49, as it Affected Canada

Certain favourable factors operated in 1948 to expand Canadian export trade. Continued high economic activity in the United States encouraged higher levels of exports to that country and United States tariff concessions assisted this movement. Certain Canadian export restrictions to the United States, including those on meat, cattle and grains, were also lifted and this permitted those commodities to move in greater volume to the United States at a time when the demands for many of these products were declining in overseas countries. The maintenance of most of the import restrictions throughout the year kept Canadian imports from the United States at a reasonable level, however.

The most important result that emerged from Canada's trade during 1948 was a substantial increase in the balance of exports. This contributed materially to the marked recovery in Canada's foreign exchange reserves which had reached a critically low level during the previous year. The result noted, however, was accomplished at the expense of unprecedented shifts in the directions of Canadian trade. The traditional export balance with overseas countries—particularly the United Kingdom and other members of the Sterling Area—was reduced and Canada's import balance with the United States underwent considerable contraction.

A new element of considerable significance affecting world trade in 1948 was the establishment by the United States of the Economic Co-operation Administration within the framework of the European Recovery Program (E.R.P.). The effects of the operations of this Administration helped to prevent a more severe contraction of exports to Europe although world-wide exchange difficulties, which persisted from the previous year into 1948, had their undermining effect on the purchases of all countries including those receiving direct or indirect assistance from the United States.

Restrictions on expenditures by such outside countries became particularly wide-spread and affected Canadian export trade very materially, but there were other developments and tendencies adversely affecting Canadian trade during 1948. Because of the inability to earn dollars, many countries outside the dollar areas have, aside from the European Recovery Program, had to restrict imports still further below normal and there has been a strong tendency for them to develop trade among themselves even on such artificial bases as special arrangements and bilateral deals.

In the face of all the factors and changes in direction of trade mentioned above, Canada achieved a peacetime record of foreign trade when viewed on a dollar basis. Even from the standpoint of volume there was a slight increase in exports against the 1947 level although, in this comparison, a decline of 9 p.c. in imports was shown. In comparison with 1938, the volume of Canadian trade in 1948 stood at an amount almost double the pre-war level and at prevailing prices the turn-over had increased almost fourfold (see value-volume relationships of trade on the new basis at pp. 942-943).\*

Government policies took an active part in moulding the pattern of Canadian foreign trade. Canada took part in the Geneva Conference of 1948 as a result of which tariff reductions were agreed upon by various countries including the United States. As noted above these had a favourable effect on the subsequent development of Canadian exports.

The United States and Canada have extended considerable financial aid to Britain along with Continental European countries in the form of vast loans (Canada's loans to other countries as at the end of 1948 are shown in the statement on p. 901) made after the First and the Second World Wars but these loans have failed to achieve the desired objective.

Much has been done to tide the United Kingdom and Western Europe over the worst stage of post-war adjustment. However, the stage was reached in the middle of 1949 when the fundamental unbalance of British trade with the Dollar Area called for drastic action. The crisis deepened during the summer and an Anglo-American-Canadian economic conference met at Washington in September to examine the problem. This conference considered means to expand United Kingdom and sterling exports to North America and decided upon some measures which might be taken to achieve this end. A short time after the conference, the United Kingdom Chancellor of the Exchequer announced the devaluation of sterling by 30.5 p.c. in order to bring United Kingdom prices more into line with those in

\* References to the difficulty of devising a uniform price denominator are to be found in Dominion Bureau of Statistics Reference Papers, 1949, No. 5, price 50 cents.

North America. Sterling devaluation was followed by changes in the values of most of the soft currencies throughout the world. Because of the altered situation, the Canadian dollar was reduced by about 9 p.c. in terms of the United States dollar. All these re-adjustments were designed to provide a healthier basis for the expansion of world trade.

#### I.—POST-WAR LOANS AND ADVANCES TO OTHER COUNTRIES BY THE CANADIAN GOVERNMENT

Country	Export Credit Loans Authorized	Net Amounts Drawn <sup>1</sup>			
		1945	1946	1947	1948

<sup>1</sup> Net amounts drawn include interim advances as well as drawings on Export Credit loans less repayments of interim advances and loans. All advances had been repaid by Dec. 31, 1947, with the exception of \$8,800,000 to the Union of Soviet Socialist Republics.

<sup>2</sup> Net repayments.

### The Place of Foreign Trade in the Canadian Economy

Canada has always been heavily dependent upon outside sources for the means of her development as a nation, yet circumstances during the past three decades have greatly modified this position. Since the First World War export trade has broadened in variety from the few basic primary commodities such as wheat, lumber, metals, etc., and, although these still predominate, they are by no means as important relatively as they once were. This fact has enabled Canadians to improve their standard of living considerably since the greater variety of exports has been based on a diversified production for domestic use as well.

Canada in 1948 was the fourth largest importing nation in terms of the value of commodities received. Only the United Kingdom, the United States and France held higher rank. On a per capita basis Canada out-ranked all these countries with \$205 of imports per capita compared with \$167 for the United Kingdom, \$81 for France and \$48 for the United States.

The influences that have contributed to this result are varied. For instance, much of the increase in dollar value is due to the rise in prices (see pp. 942-943). Again the general level of business activity throughout the world, especially in those countries with which trade is carried on, is a most important factor in the demand for goods, and this has remained high ever since the War. Finally, the advances in industrialization in Canada have increased the need for imported goods in many directions although they have also decreased the need in others: on balance, however, the result has certainly not been on the side of a reduction.

The core of Canada's import trade is still such commodities as fuels, steel, mechanical equipment, textiles, and foodstuffs from tropical and semi-tropical climates, as shown in the following statement. The leading exports of many decades ago are still recognizable, although in several cases (e.g., newsprint) they have taken on more complete manufactured forms.

<i>Principal Imports</i>	<i>,\$'000</i>	<i>Principal Exports</i>	<i>\$'000</i>
Petroleum, crude and refined.....	292,734	Newsprint paper.....	383,123
Machinery, except agricultural.....	217,091	Wheat.....	243,023
Coal.....	186,388	Wood-pulp.....	211,564
Farm implements and machinery.....	139,993	Planks and boards.....	196,023
Automobile parts.....	101,261	Flour of wheat.....	125,151
Rolling-mill products.....	83,929	Aluminum and products.....	102,046
Cotton products.....	78,518	Fish and fishery products.....	85,028
Sugar and products.....	71,752	Ships and vessels.....	81,448

The Canadian economy is linked closely with that of the United States and in view of the extent to which industry has developed in that country and the huge domestic market to which it caters (and therefore the relative cheapness with which goods can be marketed), it is natural that Canadians, with their many close contacts and in many cases similar habits and tastes, should be large importers of United States goods, even in the face of tariff barriers. Again, the tariff has frequently served only to bring United States branch factories to Canada and so Americanize industry to a greater extent than ever. Since the present scale of United States imports must be paid for by exports and since the position in regard to the United Kingdom has made it impossible at present to retain our traditional market there, it is imperative that reliance be placed on broadening export outlets in other directions. This is the most pressing problem that currently faces Canadian export trade.

## PART 1.—FOREIGN TRADE STATISTICS\*

### Section 1.—Explanations *re* Canadian Trade Statistics

Certain problems of procedure arise in recording trade statistics and require explanation. For the correct interpretation of the statistics of foreign trade, it is necessary that the following definitions and explanations of terms used be kept in mind:—

*Quantities and Values.*—In all tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

*Imports: Valuation.*—“Imports” means imports entered for consumption. “Entered for consumption” does not necessarily imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which said merchandise was exported. (See Sects. 35 to 45 and 55 of the Customs Act.)

\* This Part of the Chapter is based on statistics taken from reports published by the External Trade Section, International Trade Division, Dominion Bureau of Statistics.

*Canadian Exports: Valuation.*—"Canadian produce" exported includes Canadian products or manufactures, also exports of commodities of foreign origin that have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, aluminum extracted from imported ore, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual amount received in Canadian dollars exclusive of freight, insurance, and other handling charges.

*Foreign Exports: Valuation.*—"Foreign produce" exported consists of foreign merchandise that had previously been imported (entered for home consumption). The value of such commodities is the actual amount received in Canadian dollars exclusive of freight, insurance, and other handling charges.

*Countries to which Trade is Credited.*—Imports are classified as received from the countries whence they were consigned to Canada. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence despatched, after longer or shorter interval, to Canada. In such cases the second country would be the country of consignment, to which the goods would be credited.

Exports are credited to the country to which they are consigned.

*Discrepancies in Trade Statistics between Canada and Other Countries.*—Canadian statistics of exports are rarely in exact agreement with the import figures of her customers and similar differences occur with Canadian imports. Many factors contribute to these discrepancies, among which are the following:—

1. Differences in the system of valuation used by Canada and the systems used by other countries.
2. The element of time lag is of considerable importance where Canadian exports are concerned, particularly with bulk goods shipped to other continents. There are always quantities of goods in movement at the beginning or end of any trading period, and these affect the comparability between the two countries for the same period of time.
3. Canada's system of geographical classification, according to country of consignment, which may not be the ultimate destination of the goods.

**Imports from the United Kingdom.**—Published statistics of Canadian imports entered for consumption have always included several items that may be considered of a non-commercial character. These items are never very large in normal times but during the war years their inclusion in the total value of imports, from the United Kingdom in particular, tended to distort published data. The distinction between commercial and non-commercial imports is not always easy to establish, but three items have been segregated, as follows:—

- (a) "Articles for the use of the Imperial Army, Navy and Air Force". These imports consisted almost entirely of war equipment of various kinds for experimental purposes, training and use in Canada by the United Kingdom Government. The values applied to the articles imported under this classification were nominal and no duty was paid.
- (b) "Canadian goods returned". Before the War, this item amounted in value to several hundred thousand dollars annually. Late in 1945, however, the Canadian Government began the repatriation of large stocks of war equipment, the bulk of which was shipped from the United Kingdom. On entering Canada, they were classified under "Canadian goods returned" in the trade returns. They are not shown in the United Kingdom trade returns.
- (c) Settlers' effects, the property of immigrants.

The statement below shows the relation of these non-commercial items to the total.

I.—COMMERCIAL AND NON-COMMERCIAL IMPORTS FROM THE UNITED KINGDOM, 1939-48

Year	Articles for Imperial Forces	Canadian Goods Returned	Settlers' Effects	Total Non- Commercial Imports	Commercial Imports	Total Recorded Imports
	\$'000,000	\$'000,000	\$'000,000	\$'000,000	\$'000,000	\$'000,000
1939.....	0.8	0.4	0.6	1.8	112.2	114.0
1940.....	23.5	0.3	0.6	24.4	136.8	161.2

1948.....	0.7	0.8	4.9	6.4	293.1	299.5

<sup>1</sup> Less than \$50,000.

**Treatment of Gold in Trade Statistics.**—The fact that gold is a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, the movement of gold in international trade is determined, almost exclusively, by monetary factors. The amount of exports may fluctuate widely from month to month owing to other than ordinary trade or commercial considerations. In addition, gold is generally acceptable. It does not have to surmount tariff barriers and is normally assured a market at a relatively fixed price. It should also be noted that gold does not move in international trade in any direct or normal relation to sales and purchases. Changes in the Bank of Canada's stock of gold under earmark do not enter, therefore, into the trade statistics.

Statistics showing the *net* exports of non-monetary gold, including changes in stocks held under earmark, which supplement the trade figures, are given below.

II.—NET EXPORTS OF NON-MONETARY GOLD, 1941-48

Month	1941	1942	1943	1944	1945	1946	1947	1948

## Section 2.—Total Foreign Trade\*

In considering the figures in the following tables, reference should be made to the explanatory notes on trade in Section 1. It must be emphasized that gold imports and exports are excluded from all tables. Imports from the United Kingdom from 1940 to 1946 are distorted by the inclusion of large amounts of non-commercial items in the trade returns (see p. 904). United Kingdom figures can be viewed in a proper perspective only if these non-commercial items are excluded from the recorded import statistics.

The trade of Canada for the period 1919-48 is shown in Table 1.

## 1.—Value of Total Foreign Trade of Canada (Excluding Gold), 1919-48

NOTE.—These figures are available on a calendar-year basis only since 1919; figures for the fiscal years 1868-1919 are given in the 1940 edition of the Year Book, p. 526.

Year	Imports			Exports			Balance of Trade: Excess of Exports (+) Imports (—)

Tables 11 and 12 provide an excellent survey of the changing nature and value of Canadian commodity trade from 1926 to 1948.

## 11.—Leading Imports, 1926, 1930, 1940 and 1946-48

NOTE.—Commodities are arranged in order of importance, 1948.

Commodity	1926	1930	1940	1946	1947	1948
	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
Petroleum, crude and refined.....	50,994	64,822	63,787	116,835	198,285	292,734
Machinery, except agricultural.....	38,684	50,435	71,497	130,287	206,012	217,091
Coal.....	59,760	56,694	49,630	120,354	138,950	186,388
Farm implements and machinery.....	17,631	21,944	30,673	68,352	105,405	139,993
Automobile parts.....	27,466	23,359	47,580	66,453	98,432	101,261
Rolling-mill products.....	47,710	46,509	55,610	53,376	77,970	83,929
Cotton products.....	32,858	25,563	24,646	74,761	119,413	78,518
Sugar and products.....	37,883	26,496	29,115	39,879	57,420	71,752
Wool products.....	39,199	33,339	20,611	34,744	54,393	67,322
Electrical apparatus, <i>n.o.p.</i> .....	16,697	30,281	21,250	47,788	68,773	62,127
Fruits.....	29,523	30,974	27,943	95,496	77,477	59,561
Cotton, raw and linters.....	23,722	14,653	25,884	44,397	60,481	56,829
Engines and boilers.....	13,908	10,827	12,385	29,462	43,882	50,285
Wool, raw and unmanufactured.....	10,159	6,007	26,353	29,825	30,070	47,744
Rubber and products.....	29,991	12,842	35,115	20,079	28,730	31,607
Books and printed matter.....	13,433	16,827	16,655	30,737	31,935	21,268
Nuts.....	4,621	4,158	4,167	22,591	22,050	31,027
Clay and products.....	8,196	10,747	11,125	17,825	24,059	30,773
Grains and products.....	17,197	16,628	7,388	20,197	36,453	30,565
Artificial silk and products.....	5,500	13,781	6,692	22,103	34,493	29,680
Automobiles, freight and passenger.....	24,381	20,560	15,438	31,702	69,540	27,303
Flax, hemp, jute and products.....	15,643	11,808	14,993	23,142	37,873	27,259
Glass and glassware.....	8,515	8,285	10,141	23,258	28,626	25,925
Furs and products.....	12,560	9,585	8,886	27,292	22,451	24,568
Coffee and chicory.....	6,104	5,135	3,666	16,162	14,382	23,914
Oils, vegetable.....	12,244	11,518	10,050	15,062	25,642	20,912
Stone and products.....	5,747	7,059	7,584	14,676	18,357	20,084

## 11.—Leading Imports, 1926, 1930, 1940 and 1946-48—concluded

Commodity	1926	1930	1940	1946	1947	1948
	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
Coal products.....	7,521	6,359	6,080	12,728	14,739	19,839

## 13.—Principal Imports into Canada for Consumption from All Countries.

No.	Item	All Countries			
		1945	1946	1947	1948
V. Iron and Its Products					
1	Iron ore..... ton	3,739,867	2,281,677	3,944,550	4,300,163
	\$	8,595,799	6,467,023	12,716,818	15,506,959
2	Ferro-alloys..... \$	1,015,540	676,927	1,657,533	1,246,017
3	Pigs, ingots, blooms and billets..... \$	2,050,839	629,241	793,655	4,470,587
4	Scrap iron or steel..... \$	818,021	2,162,748	4,197,477	10,453,507
5	Castings and forgings..... \$	8,186,092	7,445,409	8,598,084	9,793,464
6	Rolling-mill products..... \$	55,049,280	53,376,272	77,969,781	83,929,042
7	Tubes, pipes and fittings..... \$	5,641,488	8,411,415	13,464,380	18,598,169
8	Wire..... \$	4,314,531	3,927,855	6,556,151	9,016,453
9	Chains..... \$	1,886,515	1,635,528	2,857,312	3,636,607
10	Engines and boilers..... \$	28,039,843	29,462,014	43,882,425	50,284,809
11	Farm implements and machinery..... \$	50,435,476	68,351,742	105,404,869	139,993,374
12	Hardware and cutlery..... \$	4,672,734	7,431,482	10,388,169	10,143,978
13	Machinery (except agricultural)..... \$	92,780,717	130,286,814	206,011,544	217,090,260
14	Springs..... \$	517,862	785,386	188,634	179,656
15	Stamped and coated products..... \$	2,082,039	3,433,097	5,770,037	4,476,094
16	Tools and hand implements..... \$	7,944,826	10,135,395	11,454,000	10,998,696
	Vehicles, chiefly of Iron—				
17	Automobiles, freight..... No.	552	3,166	6,289	3,348
	\$	1,939,667	6,493,042	12,041,505	5,874,814
18	Automobiles, passenger..... No.	1,101	19,076	36,574	17,264
	\$	2,936,550	25,209,172	57,498,704	21,427,869
19	Automobile parts..... \$	67,855,156	66,453,145	98,431,717	101,261,033
20	Other vehicles..... \$	4,379,324	9,509,837	15,681,459	11,567,761
	Totals, Vehicles, chiefly of Iron..... \$	77,110,697	107,665,196	183,653,385	140,131,527
21	Other iron and steel products..... \$	33,317,599	48,784,962	66,794,743	52,305,980
	Totals, Iron and Its Products..... \$	384,459,898	491,068,506	762,358,997	782,255,184
VI. Non-Ferrous Metals					
	Aluminum—				
22	Bauxite..... cwt.	18,794,253	25,663,512	27,853,853	40,169,876
	\$	7,262,766	8,524,873	8,565,875	9,884,001

## 13.—Principal Imports into Canada for Consumption from All Countries,

No.	Item	All Countries			
		1945	1946	1947	1948
VII. Non-Metallic Minerals—concluded					
1	Glass and manufactures of..... \$	16,097,986	23,258,143	28,625,643	25,925,237
2	Graphite and its products..... \$	459,367	601,677	591,099	532,577
3	Mica and manufactures of..... \$	236,597	280,142	571,638	407,202
Petroleum, Asphalt and Products—					
4	Petroleum, crude..... M gal.	1,988,361	2,219,365	2,417,820	2,717,306
	..... \$	72,411,691	89,546,890	128,826,670	197,140,292
5	Fuel oil for ships' stores..... gal.	35,395,731	12,922,344	11,170,800	12,504,174
	..... \$	1,288,061	510,715	510,031	756,681
6	Coal oil and kerosene..... gal.	13,039,459	35,557,549	147,427,903	76,868,321
	..... \$	801,575	2,280,149	12,448,086	8,791,014
7	Gasoline..... gal.	78,550,544	176,658,361	229,086,957	322,607,355
	..... \$	9,571,414	14,911,781	25,521,588	46,461,672
8	Lubricating oils..... gal.	10,515,900	10,913,011	13,649,862	16,176,373
	..... \$	3,624,105	3,740,123	4,799,737	5,631,949
9	Other petroleum and asphalt products..... \$	7,359,169	12,753,267	35,087,685	43,001,093
Totals, Petroleum, Asphalt and Products \$		95,056,015	123,742,925	207,193,797	301,782,708
10	Stone and its products..... \$	9,887,719	14,676,273	18,357,343	20,084,245
11	Other non-metallic minerals..... \$	12,578,762	16,914,103	15,430,280	16,699,117
Totals, Non-Metallic Minerals..... \$		265,405,010	332,611,081	452,197,951	606,182,256
VIII. Chemicals and Allied Products					
12	Acids..... \$	3,302,751	3,228,005	3,510,121	3,926,038
13	Alcohols, industrial..... \$	306,372	688,618	1,615,990	1,493,303
14	Cellulose products..... \$	5,330,489	6,554,324	5,456,594	4,451,472
15	Drugs, medicinal and pharmaceutical products..... \$	9,440,067	9,370,879	11,653,203	13,163,602
16	Dyeing and tanning materials..... \$	8,296,920	9,208,514	10,414,778	10,117,384
17	Explosives..... \$	923,101	848,186	901,654	1,139,658
18	Fertilizers..... cwt.	3,869,118	5,094,973	6,612,184	6,426,175
	..... \$	3,706,518	4,561,115	6,584,828	6,297,690
19	Paints, pigments and varnishes..... \$	8,660,314	9,436,521	13,441,471	14,276,958
20	Perfumery, cosmetics and toilet preparations..... \$	402,176	720,645	723,403	192,706
21	Soap, common laundry..... lb.	2,884,502	6,065,092	8,514,627	7,003,678
	..... \$	227,943	538,637	1,086,150	967,683
22	Soap, other..... \$	177,505	423,832	1,731,616	519,109
Inorganic Chemicals, n.o.p.—					
23	Alum and compounds of aluminum and iron cwt.	736,531	582,416	123,049	74,596
	..... \$	1,017,291	768,859	204,451	173,848
24	Ammonia and its compounds..... lb.	5,288,075	9,202,540	9,946,701	5,648,585
	..... \$	196,760	326,877	280,160	214,206
25	Compounds of antimony, arsenic, copper, tin and zinc..... lb.	7,721,703	2,679,816	2,752,973	1,851,007
	..... \$	522,969	197,105	241,234	154,881
26	Potash and potassium compounds, n.o.p.... lb.	5,903,288	7,234,734	7,618,174	9,424,895
	..... \$	679,219	634,782	623,282	745,665
27	Soda and sodium compounds, n.o.p..... lb.	121,594,197	195,958,260	209,675,662	257,184,889
	..... \$	3,698,147	5,259,966	6,607,563	9,532,995
28	Other inorganic chemicals..... \$	5,156,052	5,376,377	5,830,359	7,659,213
Totals, Inorganic Chemicals, n.o.p..... \$		11,270,438	12,563,966	13,787,049	18,480,808
29	Other chemicals and allied products..... \$	27,714,061	34,730,871	42,177,847	43,353,410
Totals, Chemicals and Allied Products..... \$		79,758,655	92,874,113	113,084,704	118,379,821
IX. Miscellaneous Products					
30	Amusement and sporting goods, n.o.p..... \$	3,043,184	7,057,712	10,001,156	7,887,706
31	Brushes..... \$	387,453	749,717	740,716	642,912
32	Containers, n.o.p..... \$	1,622,918	2,283,147	3,091,257	3,654,264
33	Household and personal equipment..... \$	8,431,393	18,004,889	24,210,962	12,485,466
34	Mineral and aerated waters..... \$	7,239	42,798	36,828	56,822
35	Musical instruments..... \$	953,473	3,361,302	4,712,062	3,356,600
36	Scientific and educational equipment..... \$	9,215,794	13,819,553	18,358,863	17,909,541
37	Ships and vessels..... \$	3,319,764	937,814	3,153,508	1,820,161
38	Vehicles (except iron)..... \$	16,439,765	10,865,655	14,930,947	9,734,583
39	Works of art..... \$	1,163,742	1,693,428	1,691,458	1,864,816
40	Miscellaneous imports under special conditions \$	166,095,597	89,102,109	34,155,718	23,275,997
41	Other miscellaneous commodities..... \$	17,646,361	33,192,314	46,969,289	32,659,192
Totals, Miscellaneous Products..... \$		228,326,683	181,710,438	162,052,564	115,346,060
Grand Totals, Imports for Consumption..... \$		1,585,775,142	1,927,279,402	2,573,944,125	2,636,945,352

## Section 5.—Imports and Exports by Degree of Manufacture, by Origin and by Purpose

Analyses of Canada's trade, from the angle of degree of manufacture of imports and exports with leading countries, are of value to the student of economic relationships because they present, in summary form, details with significant meaning in the complementary relationship of manufacturing and commerce between continents and countries.

The data of Tables 15 and 17 have been specially tabulated to show at a glance this information for all countries of any importance that trade with Canada. Table 16, on the other hand, gives historical statistics that clearly indicate the fluctuations in imports for home consumption of important raw materials used in Canadian manufacture, irrespective of their source. In a broad way, the data reflect the development of Canadian manufactures, although the industrial expansion for the purposes of war must be borne in mind in using the figures for the past decade.

### 16.—Imports of Certain Raw Materials Used in Canadian Manufactures, 1935-48

NOTE.—Figures for the years ended Mar. 31, 1902-10 are given in the 1926 Year Book, p. 463; those for the years ended Mar. 31, 1911-39 are given in the 1940 edition, p. 533. Calendar-year figures are available only for 1926 and subsequent years; those for 1926-34 are given at pp. 927-928 of the 1948-49 edition.

<sup>1</sup>In this classification the expression "Canadian Farm Products" refers, in the case of exports, to commodities actually produced, in their original state, on Canadian farms. In the case of imports, it covers all commodities of which the basic raw materials are such as Canadian farms produce. "Foreign Farm Products" covers, in both imports and exports, materials or commodities such as Canada does not produce in their original forms, e.g., cane sugar, tea, rubber, cotton, silk, etc.

## Section 6.—Comparison of Value, Price and Volume of Foreign Trade\*

Since value figures alone are somewhat misleading when used to show the physical growth of foreign trade, the fluctuations in the volume of the country's trade as distinguished from the value thereof should be taken into account. Changes in the value of imports and of exports over a period may be caused by variations in quantities, by fluctuations in prices or by a combination of both these factors. It is desirable, therefore, to isolate each of the two factors of price and quantity in order

\* A detailed analysis of the new value-volume comparison indexes is given in Part I of the "Review of Foreign Trade" published by the Dominion Bureau of Statistics in 1949.

to observe the relative effects of their movement apart from the combined effect displayed by trade values. New interim indexes of prices of imports for consumption and of exports of domestic produce have been constructed at the Dominion Bureau of Statistics to serve this purpose. Such an index of prices when divided into an index of trade values can be said to 'deflate' the trade totals according to that proportion of the value level caused by price-level change. The resulting index is an index of the physical volume of trade which is a measure of the quantum of the current-year trade in terms of the base-year prices.

The Dominion Bureau of Statistics has published value-volume comparisons since 1914. These were first based on 1914 and data were worked back to that year, but after 1929 comparisons with the pre-war year were discontinued and the year 1926 was accepted as being more representative of existing conditions. After the depression of the early 1930's the base year 1936 was decided upon for similar reasons and comparisons were worked back to 1932 and are published at pp. 583-585 of the 1938 edition and in later Year Books. Comparisons on the 1936 base were continued down to 1939. A few years later the 1936 base, in its turn, proved to be not sufficiently representative and a broader base (1935-39=100) was established. Indexes on this base are given in the 1946 Year Book and were compiled back to 1935. It was then felt that the value-volume calculations were due for some refinement in statistical method. In the intervening years, the problems of pricing and commodity classification had been taken in hand and a system devised by which values, value indexes and the resultant volume indexes could be grouped on a comparable basis—a very important consideration affecting the integrity of the indexes. For this reason the publication of value-volume comparisons ceased after 1945 when the refinements referred to were being applied. They are revived on the latest base, 1938, in Table 19.

<sup>1</sup> Groups, though classified by component material, differ slightly from conventional groups (see text, p. 943). <sup>2</sup> Excludes: imports for the use of the United Kingdom Government; temporary imports for exhibition or competition; and monetary and non-monetary gold. <sup>3</sup> Excludes: exports of foreign produce; temporary exports for exhibition or competition; and monetary and non-monetary gold.

The relative significance of changes in price and volume of exports and imports in 1948 as compared with 1947 is shown by the following statement:—

Item	1947	1948	Increase of Value	P.C. Increase of Price	P.C. Change of Volume
	\$'000,000	\$'000,000	\$'000,000		
Domestic exports <sup>1</sup> .....	2,774.9	3,075.4	300.5	9.9	+ 0.9
Imports for consumption <sup>1</sup>	2,570.9	2,634.6	63.7	12.9	— 9.3

<sup>1</sup> Totals adjusted according to the price indexes (see footnotes 2 and 3, Table 19).

The relative levels of these import and export price indexes are significant to the extent that they indicate a change in the net 'barter terms' ratio to have occurred in 1948. Prices of exports have increased, on the average, at a rate which is less than the rate of increase of import prices. Assuming that 100 units of exports of domestic produce would have purchased 100 units of imports for consumption in 1938, this 100 units of exports would have obtained 102.5 units of imports in 1946, 101.3 units of imports in 1947, but only 97.5 units of imports in 1948. The barter terms, however, may be said to have become unfavourable in 1948 in a sense limited by the fact that re-export prices are not taken into account.

## PART II.—EXTERNAL TRANSACTIONS\*

### Section 1.—Canadian Balance of International Payments

Canada's balance of payments in recent years has been subject to wide fluctuations which were particularly marked during 1947 and 1948. The current account surplus of exports of goods and services to all countries rose rapidly to \$453,000,000 in 1948 from the low level of \$47,000,000 reached in the year 1947. Most of the increase in exports of goods and services in 1948 resulted from higher

\* Prepared in the International Payments Section, International Trade Division, Dominion Bureau of Statistics.

prices as the volume was only slightly greater than in the preceding year. On the other hand, the volume of imports of goods and services was reduced appreciably, chiefly because of the effects of the Emergency Exchange Conservation program introduced in November, 1947.

During 1948 there was a great alteration in the direction of Canada's international trade. The current account deficit with the United States declined sharply from \$1,135,000,000 in 1947 to \$401,000,000 in 1948. This arose mainly from the unprecedented rise in the value of Canadian exports of goods and services to the United States which coincided with a reduction in the value of imports due to reductions in the volume of commodity imports from the United States and in other current expenditures. In 1948 almost 50 p.c. of Canadian commodity exports were to the United States compared with 39 p.c. in 1947 and a smaller ratio before the War.

This reduction in the disequilibrium with the United States was accompanied by appreciable declines in the export surplus with the United Kingdom, the rest of the Sterling Area, and with other overseas countries. The current surplus with all overseas countries dropped from \$1,220,000,000 in 1947 to \$873,000,000 in 1948.

At the same time the amount of Canadian exports financed by the Canadian Government through post-war loans and export credits was much less in 1948 than in the two preceding years, declining to \$126,000,000 from \$563,000,000 in 1947 and \$750,000,000 in 1946. There was consequently a large amount of convertible exchange received from trade with overseas countries in 1948 even though the current account surplus with this group of countries declined.

Other capital movements in 1948 contributed to accretions in the official reserves in contrast to the preceding year when they led to the use of reserves. Chief among these capital movements was the sale of \$150,000,000 of bonds by the Federal Government to a group of insurance companies at New York for the purpose of repaying amounts drawn earlier in the year from the credit extended by the Export-Import Bank of Washington. Similarly redemptions of Canadian securities owned in the United States were much smaller in 1948 than in 1947 when there had also been the gold contribution of \$74,000,000 by Canada to the International Monetary Fund.

These fluctuations in net exports of goods and services and in capital movements have had direct effects upon the size of the official liquid reserves of United States dollars and gold which declined in 1947 by \$743,000,000 and recovered again in 1948 by \$496,000,000. As a result, these reserves amounted to \$997,800,000 by the end of 1948. But by the middle of June, 1949, the reserves were slightly lower at about \$977,000,000, indicating that the rapid improvement in Canada's exchange position which occurred in 1948 did not continue in 1949. In the first half of 1949 Canada's balance of commodity exports was only \$29,000,000 compared with \$149,000,000 in the same period of 1948.

**Transactions with the Sterling Area.**—A sharp reduction occurred in the current account surplus from Canadian exports of goods and services to the United Kingdom and the rest of the Sterling Area. Reduced to \$617,000,000 in 1948 from \$874,000,000 in 1947, this surplus was the lowest of any post-war year but was still much higher than before the War: the corresponding figure in 1938 was \$171,000,000. The current account surplus with the United Kingdom alone declined from \$633,000,000 in 1947 to \$488,000,000 in 1948 due to reductions in exports and

increases in imports. The decline in exports to the United Kingdom resulted from reduced British buying in Canada of commodities like bacon and lumber, and the termination of other British purchases such as apples and beef. In contrast a major increase occurred in Canadian imports from the United Kingdom which rose from \$182,000,000 in 1947 to \$287,000,000 in 1948. This increase was the result of improving supplies in Britain, higher prices, and special opportunities for the expansion of British exports to Canada arising from quotas on certain imports, such as textiles and automobiles, introduced by the Canadian Government in November, 1947, as part of the remedial measures taken at that time. These were followed early in 1948 by the temporary suspension of Canadian customs duties on certain textiles. Although a substantial increase occurred in imports of cotton textiles particularly, the volume of these imports in 1948 was still less than the pre-war level and less than the export targets in the United Kingdom.

The current surplus with the remaining countries of the Sterling Area fell from \$241,000,000 in 1947 to \$129,000,000 in 1948. This group of countries sharply reduced purchases in Canada following the deterioration in the dollar position of the Sterling Area in 1947. There was a reintroduction or extension of import controls in these countries, resulting in widespread declines in exports of manufactured goods from Canada. The value of all Canadian exports to this group of countries declined to \$293,000,000 from the peak of \$366,000,000 in 1947.

In addition to these surpluses from commodity trade, other factors such as freight and shipping transactions contributed to the credit balance with the Sterling Area. Besides the earnings of Canadian transportation companies on inland freight there were substantial earnings of Canadian shipping companies from carrying exports to the United Kingdom and other Commonwealth countries. In addition, the expenditures of British ships in Canadian ports were larger than freight earned by British ships carrying goods to Canada. Miscellaneous current transactions, including unilateral items like transfers of immigrants' funds and inheritances, also contributed to the credit balance with the Sterling Area. Offsetting some of these 'invisible' receipts were net payments of interest and dividends by Canadians on British investments in Canada. But these payments have been reduced significantly since before the War by redemptions of Canadian bonds formerly held in the United Kingdom and by other repatriations of securities. While Canadian travel expenditures in the United Kingdom have been increasing in recent years the balance of payments by Canada is still relatively small.

The principal special means of financing the British deficiency in Canada has been the Canadian loan of \$1,250,000,000 to the United Kingdom. Drawings on this loan to the end of 1948 totalled \$1,015,000,000. These drawings in 1947 had been reduced as Canada's U.S. dollar position placed limitations on the rate at which the loan might be drawn. Drawings in 1948 were further reduced, being limited to \$52,000,000 drawn in the early months of the year. Early in 1949 it was announced by the Government that drawings on the remainder of this loan at a rate of \$10,000,000 a month had been arranged for, beginning in January of that year.

The other major means of financing the deficiency has been through the receipt of gold and convertible exchange from the United Kingdom. In the three years 1946-48, \$1,252,000,000 was received in convertible exchange, \$597,000,000 of this amount being in 1948. Other capital movements between Canada and the United Kingdom were smaller in 1948 than in earlier years. Repatriations, amounting to

\$18,000,000, of Canadian securities were smaller as were repayments by the United Kingdom of \$64,000,000 on the 1942 loan. At the end of 1948 the amount of this loan outstanding was \$304,000,000.

**Current Deficit with the United States.**—A sharp reduction in the deficit on commodity account was responsible for most of the impressive reduction of \$734,000,000 in Canada's current deficit with the United States. Net payments for merchandise were reduced by \$601,000,000 during the year. The rapid expansion in Canadian exports to the United States accounted for 75 p.c. of this change in contrast to 1947 when the more dynamic change occurred in the rise in imports. Exports to the United States in 1948 were about 44 p.c. greater than in 1947. The remainder of the improvement in the balance in 1948 came in the decline in the value of imports.

The increase in the value of exports occurred in a great many commodities including the principal export staples. Some of these increases were due to diversions of exports, such as lumber and meat, from overseas markets when overseas demand was reduced and when export controls were removed. These had formerly limited or cut out shipments of many commodities to the United States because of the need to supply overseas countries or because of internal shortages. Improving supplies of other commodities also contributed to the higher exports to the United States when restrictions on exports were withdrawn. At the same time the market in that country for some commodities increased appreciably due to shortages of supplies and rising demands there, as in the case of the exceptionally high exports of Canadian non-ferrous metals. Reductions in the United States tariffs, resulting from the Geneva meetings of the Conference on Trade and Employment, also made for more favourable entry into the United States for many Canadian commodities. While price increases in 1948 contributed an important part to the rise in the value of Canadian exports, most of the impressive increase can be attributed to the increased volume arising from diversions of commodities, abnormal demands, and more favourable tariffs.

Canadian demands for United States commodities continued at exceptionally high levels due to the continuation of Canadian prosperity and investment activity. The volume of many types of imports from the United States, however, was reduced by the effects of the prohibitions and quotas imposed by the Emergency Exchange Conservation program introduced in November, 1947. While the volume of some imports, such as textiles and other consumer goods, was reduced by these restrictions, the value and volume of imports of some other groups of commodities rose as a result of higher volume as well as the higher prices generally prevailing for most imports from the United States in 1948.

The deficit from other current transactions with the United States in 1948 was \$133,000,000 less than in the preceding year. The most important change in the deficit in other current transactions was the reduction in travel expenditures by Canadians in the United States due to the restrictions upon pleasure travel involving expenditures of United States currency and the prohibitions on purchases by travellers introduced in November, 1947. Total Canadian expenditures in the United States on travel declined \$40,000,000 in 1948 to \$113,000,000. At the same time United States travel expenditures in Canada continued to increase with the result that the balance of receipts on travel account rose materially. Another appreciable gain in receipts from the United States was non-monetary gold, the production of which increased. A favourable trend also developed in freight and shipping payments, due mainly to the reduced commodity deficit with the United States. A minor decline

occurred in net payments on income account from reduced payments of interest. Higher payments of dividends by publicly owned companies largely offset reduced payments by subsidiaries and controlled companies to United States parent companies.

**Transactions with Other Foreign Countries.**—There continued to be a substantial surplus from exports of goods and services to other foreign countries although it was reduced from the level of the preceding year. The surplus with "ERP" countries, other than those belonging to the Sterling Area, amounted to \$242,000,000 in 1948 compared with \$281,000,000 in 1947. A considerable part of this surplus in 1948 was financed by official contributions by the Federal Government which amounted to \$13,000,000 and by net post-war loans by the Federal Government of \$51,000,000. The current surplus with all other foreign countries declined from \$65,000,000 in 1947 to \$14,000,000 in 1948. Official contributions in 1948 to this group of countries amounted to \$6,000,000 and post-war loans by the Canadian Government to \$23,000,000. As these loans and contributions were less than in 1947 net receipts of convertible exchange from all foreign countries overseas, amounting to \$173,000,000, were higher than in 1947.

**Capital Movements with the United States Dollar Area and Changes in Reserves.**—As receipts of convertible exchange from all overseas countries exceeded the current deficit with the United States in 1948, there was then a surplus of United States dollars from current transactions of \$369,000,000 in contrast to a deficit of \$497,000,000 in 1947. Capital movements with the Dollar Area were predominantly inward in 1948 adding further to the increase in official reserves of \$496,000,000. These inward movements were the opposite to those of the previous year when outward movements of capital for redemptions and Canada's gold subscription to the International Monetary Fund led to the use of reserves. The principal single factor leading to the net inflows of capital in 1948 was the sale in the United States of a Federal Government issue of bonds of \$150,000,000. There were also larger inflows of capital for direct investment in Canada in 1948.

## Section 2.—Tourist Trade Statistics

The tourist trade continues as an important invisible item in Canada's balance of international payments as shown in the tables at pp. 950-952. Being one of the nation's great service industries, it represents in economic terms the desire on the part of residents of other countries to experience more of Canada's scenic beauty, the invigorating climate, religious shrines and places of historical interest. To maintain this interest large capital expenditures have been made on hotel accommodation,

improved highways, national parks and many other attractions. The desire to travel has been stimulated by modern progress in the form of better roads, comfortable transport facilities, more leisure and improved working conditions.

Expenditures of travellers from other countries in Canada have comparable effects on the balance of payments with the export of commodities and, similarly, the expenditures of Canadian travellers in other countries influence the balance of payments as the import of goods from abroad. Hence a most important factor is the balance of revenue remaining after total disbursements by Canadian travellers abroad have been deducted from total receipts left in Canada by departing non-residents. Expenditures in Canada during 1948 by residents of other countries rose to a new high of \$283,000,000\*, while the expenditures of Canadian travellers in other countries dropped to \$134,000,000 from \$167,000,000 in the previous year. As a result, net receipts were approximately \$148,600,000 compared with a previous high of \$90,000,000 in 1929 and a low of \$45,000,000 in 1933.

The industry of catering to visitors from other countries has become one of major importance and employment created by the effects of an inflow of tourist funds is widely distributed throughout Canada. Although the whole Canadian economy benefits as a result, the benefit is of particular significance to some otherwise unproductive parts of the country which have natural tourist attractions. The tourist trade has raised the standard of living in such places and the influx of visitors has given them a better understanding of Canada.

Some light is thrown on the flexibility of the traffic and on Canada's capacity to provide overnight accommodation for transients by an investigation into the average number of travellers from the United States who remained overnight in Canada at various seasons of the year 1948. The number of United States travellers requiring overnight accommodation varied from a minimum of 32,000 for an average night in February to a maximum of 254,000 for an average night in August. It can be assumed that the averages mentioned are exceeded on most Saturdays and Sundays and indications are that when Labour Day and Independence Day fall close to a week-end the accommodation provided far outstrips the averages.

**United States Travel Expenditures in Canada.**—Expenditures in Canada during 1948 by travellers from the United States totalled \$270,000,000,\* an increase of 12 p.c. over the previous high point of \$241,000,000 established in 1947. In 1948 the short-term traffic made up approximately 24 p.c. of the total expenditures compared with 19 p.c. in 1947, whereas the longer-term traffic accounted for 76 p.c. of the total compared with 81 p.c. in the previous year. Average expenditure rates by non-permit motorists entering Canada for periods of less than 48 hours were approximately 39 p.c. higher than in 1947 and those of all short-term motorists were 60 p.c. higher. Heavier spending by short-term motorists reflects increased purchases of foodstuffs and other commodities that were more plentiful or at more attractive prices in Canadian border communities as well as increased outlays on recreation. Total expenditures of motorists entering on customs permits, who are entitled to remain for 48 hours or longer or to leave by a point

\* Subject to revision.

other than that of entry, were about 14 p.c. greater than in 1947. For the first time since 1941 receipts from motorists exceeded those of travellers entering Canada from the United States by all other means of transportation.

Receipts from travellers arriving by train remained at \$56,000,000 in 1948, considerably lower than the high level of \$67,000,000 reached in 1944 when automobile traffic was restricted, but well above pre-war levels. Expenditures of travellers entering Canada by bus, including a nominal amount for in-transit passengers who have opportunities to make limited purchases while *en route*, totalled \$21,000,000 in 1948, an increase of 25 p.c. over the previous year.

The volume of traffic entering Canada by air in 1948 was slightly higher than in 1947, but expenditures totalling \$12,000,000 were approximately \$1,000,000 lower than in the previous year. Expenditures of travellers by boat amounted to \$16,000,000, a decrease of \$6,000,000 from 1947. Receipts from travellers arriving by all other means of transportation reached \$23,000,000 in 1948, an increase of 63 p.c. compared with the previous year.

**Canadian Travel Expenditures in the United States.**—The outstanding development in international travel in 1948 was the substantial decrease in expenditures of Canadian travellers in the United States. From an all-time low of \$21,000,000 in 1941 brought about by wartime restrictions on travel, Canadian

expenditures made substantial annual gains until in 1947 they reached a peak of \$167,000,000, a figure more than twice as large as the average annual expenditures for the preceding 20 years. Late in 1947 the virtual elimination of tourist purchases abroad and the establishment of a ration for pleasure travel involving expenditures of United States exchange were introduced as part of the Emergency Exchange Conservation program. Consequently, expenditures of Canadian travellers in 1948 experienced their first decline in seven years—from \$167,000,000 to \$134,000,000. The resulting net credits were \$157,000,000, 52 p.c. more than the previous record of \$103,000,000 which had held since 1929.

In 1948 automobile travel ranked third after train and through bus when considered in relation to expenditures of Canadian travellers in the United States. Automobile traffic, however, has increased more rapidly than bus and the easing of the restrictions on tourist purchases abroad at the beginning of 1949 may well bring a reversal of the relative positions of these two means of travel. Expenditures of Canadian motorists in the United States totalled \$25,000,000 in 1948, the decline being smaller proportionally than for other types of travel. Expenditures of Canadians returning by bus totalled \$26,000,000 in 1948, a decline of 26 p.c. from the previous year.

The greatest drop in expenditures occurred in train travel, the total of \$36,000,000 being 31 p.c. lower than in 1947. The decrease was brought about by a combination of diminished traffic and lighter spending per person. Expenditures of aircraft passengers at \$7,000,000 dropped 19 p.c. whereas travellers by boat spent \$3,000,000, a drop of 24 p.c. Residents of Canada returning from the United States on foot and by ferry, local bus, and all other means of transportation accounted for expenditures of \$16,000,000.

**Travel Between Canada and Overseas Countries.**—Total expenditures in Canada by non-immigrant travellers from overseas countries including Newfoundland were estimated at \$13,000,000 for 1948, compared with \$10,000,000 for 1947. Improved service by water and air brought travellers in greater numbers than in the year before, but currency restrictions abroad kept average expenditures per person to a minimum. Traffic in 1948 contained a larger proportion of travellers from Newfoundland who customarily stay for shorter periods and spend less than travellers from distant countries.

Canadians travelled to overseas countries in greater numbers in 1948 than in 1947, the increase being larger than that which occurred in overseas travellers visiting Canada. A higher proportion of the total than formally travelled by air. Air travellers in general make visits of shorter duration but their rate of spending while abroad is usually higher. As more than one-half the Canadian overseas air traffic is handled by Trans-Canada Air Lines a considerable part of the cost of transportation does not represent a movement of funds out of Canada, and consequently is not included in expenditures of Canadians in overseas countries. Many residents of Canada visit relatives while abroad, a factor tending to restrict overseas expenditures. Total travel expenditures in overseas countries including Newfoundland in 1948 were estimated at \$21,000,000 as against \$15,000,000 in 1947. The result in net debits was \$8,000,000 compared with \$5,000,000 in 1947.

**Tourist Information.**—Tourist information is supplied generally by the Canadian Travel Bureau, Ottawa, while detailed information on the National Parks and historic sites may be obtained from the National Parks Bureau, Department of Mines and Resources, Ottawa. For advice regarding specific provinces or particular cities or resorts, the tourist may apply to the provincial or municipal bureau of information concerned. See Chapter XXX.

### **PART III.—THE GOVERNMENT AND FOREIGN TRADE\***

#### **Section 1.—Foreign Trade Service and Associated Agencies Concerned with the Development of Foreign Trade**

Foreign trade contributes substantially to the welfare and prosperity of Canadians, due largely to the fact that the productive capacity of Canada is greater than the ability of her population to consume the output of farms, factories, forests, fisheries and mines. Every effort is made, therefore, to establish and maintain close commercial relations with other countries whose markets are essential to the national economy. It is appreciated, however, that two-way trade should be encouraged, in order that goods and services may be accepted in partial payment for the products Canada is in a position to export. Furthermore, many commodities that are not indigenous to this country have to be imported from abroad, some being required for Canadian industrial processes. Others may be classed as consumer goods, necessary for the maintenance of a high standard of living.

Although many private firms have established connections in other countries that enable them to maintain a steady flow of goods in either direction, others require the assistance of government agencies in finding markets or sources of supply. Import and export controls, imposed by many countries for a variety of reasons, together with post-war foreign exchange difficulties, present problems that no single firm or even an association of manufacturers, exporters or importers can solve without intervention on the part of government representatives.

The Foreign Trade Service of the Department of Trade and Commerce and a number of associated agencies are at the disposal of exporters and importers, engaged directly in the development of Canada's commercial relations with other countries. These include:—

**Trade Commissioner Service.**—The Trade Commissioner Service might be defined as the sales department of the Foreign Trade Service. Consisting of a headquarters at Ottawa and 44 offices in 36 Commonwealth and other countries, the organization seeks to place Canada in as many world markets as possible. The work of the Trade Commissioners in the field is co-ordinated at Ottawa by four global areas headed by area chiefs. The area officers are familiar with every aspect of foreign trade in their geographical or political areas and are responsible to the Director of the Division for the presentation of official information on all trade matters in their respective territories.

Trade Commissioners bring together exporters and importers of Canada and other countries. They study potential markets for specific Canadian products, report on the exact kind of goods required, competitive conditions, trade regulations, tariffs, shipping and packaging regulations. Inquiries for Canadian goods are passed to Ottawa or directly to interested Canadian firms. For the Canadian importer,

\* Prepared in the several Branches concerned and collated in the Publicity Division, Department of Trade and Commerce, Ottawa.

Trade Commissioners seek sources of raw materials and other goods wanted in Canada, and give assistance to the foreign exporter who wishes to market his products in Canada.

In countries where Canada maintains a diplomatic mission, as well as a trade office, Trade Commissioners form an integral part of the mission and assume the titles of Commercial Counsellor or Commercial Secretary. In some foreign countries they also act as Consuls or Vice-Consuls, according to their status as Foreign Service Officers. To refresh their knowledge of the Canadian industrial picture as a whole, tours of Canadian industrial centres are arranged from time to time for Trade Commissioners. Contacts with Canadian exporters and importers are made or re-established, and the Trade Commissioners are given an opportunity to pass on information regarding the trade conditions and potentialities of their territories directly to those most concerned.

Trade Commissioner Offices are located in the following countries: Argentina, Australia (Sydney and Melbourne), Belgian Congo, Belgium, Brazil (Rio de Janeiro and São Paulo), British West Indies (Jamaica and Trinidad), Chile, China, Colombia, Cuba, Egypt, France, Germany, Greece, Guatemala, Hong Kong, India, Ireland, Italy, Japan, Mexico, the Netherlands, New Zealand, Norway, Pakistan, Peru, Philippine Islands, Portugal, Singapore, South Africa (Johannesburg and Cape Town), Sweden, Switzerland, Turkey, United Kingdom (London, Liverpool and Glasgow), the United States (Washington, New York and Los Angeles), and Venezuela. Canadian representatives of the Department of Trade and Commerce are attached to the Canadian Military Mission in Germany and the Canadian Mission in Japan. There are also regional offices in Vancouver and St. John's to assist exporters and importers in Western Canada and Newfoundland.

**Commodities Branch.**—Commodity trade promotion is the particular responsibility of a Commodities Branch, which co-ordinates the work of specialists in the Export and Import Divisions, as follows: Plant Products; Live-stock and Animal Products; Dairy Products, Poultry, Honey and Tobacco; Fish and Fish Products; Beverage and Grocery Products; Oils and Fats; Machinery and Industrial Equipment; Chemicals and Allied Products; Agricultural Machinery, Aircraft and Air Conditioning Equipment; Non-Ferrous Metals; Iron and Steel Products; Industrial Electrical and Electronic Equipment; Automotive Equipment; Non-Metallic Minerals; Wood and Wood Products; Wood-pulp, Paper and Paperboard; Textiles, Leather and Rubber; and General Products.

Related services, rendered by the Transportation and Communications Division and Priorities Branch, are administered by the Commodities Branch, together with the following control agencies: Export Permit Branch, Timber Control, and the Emergency Import Control Division.

Commodity officers are in constant communication with Canadian Government Trade Commissioners, providing them with information concerning supply conditions in Canada. Market data are supplied to Canadian exporters, who are advised of opportunities for the sale of their products, regulations governing trade, and the nature of competition in various countries. A similar service is rendered on behalf of importers, information concerning new sources of supply for materials and manufactures required in this country being sought from Canadian Government Trade Commissioners. Commodity officers familiarize themselves with conditions in their respective industries, by personal visits and exchange of correspondence, in order that they may be in a position to promote sales.

The Export Division maintains an Exporters' Directory, in which are listed Canadian firms and details of products they are in a position to sell abroad. This Directory is confidential and copies are supplied to Canadian Government Trade Commissioners, thereby enabling them to furnish foreign buyers with the latest information concerning products available in Canada.

The Import Division maintains a somewhat similar Importers' Directory. It also maintains a Canadian Trade Services Directory, containing information concerning Canadian customs requirements, invoicing, packaging, merchandising, forwarding facilities, steamship rates, rail transportation and marketing data. This Directory enables Canadian Government Trade Commissioners to obtain recognition for Canada as an organized market, and to facilitate the establishment of closer relations between Canadian importers and their foreign connections.

The Transportation and Communications Division facilitates the shipment of merchandise from the point of origin to its ultimate destination. Liaison is maintained with railways, steamship operators and agents, marine insurance companies, forwarding firms and brokerage houses. Policies initiated by foreign governments, as these affect the movement of Canadian goods, conference rates and regulations established by private steamship companies and the pattern of Canada's foreign trade are kept under constant review.

The Priorities Branch establishes a formal priority rating procedure for the purpose of channelling building materials required for the construction of certain housing, including veterans' homes, military hospitals, military health and occupational centres and other projects essential to the national economy. The provision of more houses, during a period of shortage, is made possible by assigning priority ratings for dwellings, the unit cost of which does not exceed \$10,000.

The Export Permit Branch administers controls on the export of scarce commodities, strategic commodities and items subject to government arrangement. Scarce commodities are subject to constant scrutiny, in order that they may be removed from control as soon as supplies are adequate. Through the operations of this Branch, it is possible to control the export of arms, ammunition, implements of war, atomic energy materials and other strategic items. Controls are maintained on building materials, in order to ensure a high level of construction in Canada. Controls are also maintained on certain food products, as a means of recovering on export the freight assistance and equalization fees involved.

The Emergency Import Control Division administers Schedule III of the Emergency Exchange Conservation Act, pertaining to a specified list of capital goods and production material. Following the decline in Canada's official holdings of gold and United States dollars, it was decided in November, 1947, to curtail imports of products for which a domestic or alternative source could be found. The first objective is to stimulate the manufacture in Canada of goods normally imported from the United States, where Canadian costs are low and production is economic. The second objective is to increase the export of products from Canada's primary and secondary industries, with emphasis on the degree of processing in this country. Another objective is to assist in the modernization of Canadian industry and to encourage the establishment of a more highly integrated Canadian economy. Efforts are being made to reduce the United States content of many Canadian products, particularly those made by foreign-owned branch plants. These plants are being encouraged to export more parts and finished products either to their

parent company or to other foreign markets. The administration of Schedule III is carried on by three Divisions. The Projects Division deals with the expansion of existing facilities and the construction and equipment of new industrial projects requiring imports of capital goods. A "Projects Authorization", when approved, provides assurance to persons considering a project or already having a project under way that individual import permits for goods required to complete a project will not be withheld, if suitable alternatives are not available from Canadian sources of supply at the time import permits are requested. The Allotment Division provides annual permits to cover imports under a group of specified tariff items. A continuous pattern of imports, either of production material or of component parts used by Canadian manufacturers, has thus been established. These permits are also issued to wholesale and retail distributors handling a steady flow of partly and fully manufactured commodities. The Capital Goods Division considers applications for import permits covering goods that do not follow any particular pattern of importation, and for which it is not possible to provide allotment permits on an equitable basis. Applications are refused if the goods in question are available from Canadian sources or are not considered essential to the Canadian economy.

**Economic Research and Industrial Development Branch.**—When the Department of Reconstruction and Supply was reorganized in 1948, the Economic Research Branch was transferred to the Department of Trade and Commerce and renamed the Economic Research and Development Branch. The Branch studies the economy of Canada broadly as related to trade, both domestic and foreign. The Branch has three Divisions: Economic Research; Commercial Relations and Foreign Tariffs; and Industrial Development.

*Economic Research Division.*—The Economic Research Division provides an economic intelligence service for the Department of Trade and Commerce and the Federal Government by keeping under continuous review and reporting on the business situation and outlook in Canada. Particular attention is devoted to major industries, commodities and regions as they are affected by events at home and abroad. A fuller treatment of the scope of its work is given in the Introduction to this volume.

*Commercial Relations and Foreign Tariffs Division.*—The Commercial Relations and Foreign Tariffs Division compiles information on the tariff and customs regulations, foreign exchange and trade documentation of other countries, analyzes the foreign trade situation and the impact of changing foreign tariffs and customs practices and prepares material for the negotiation of trade agreements. The work of this Division in relation to tariffs will be found in Section 2 at pp. 964-977.

*Industrial Development Division.*—This Division was established to co-ordinate federal assistance in the establishment of new industries in Canada, both of domestic and foreign origin. Close liaison is maintained with a widespread network of organizations throughout Canada, including industrial development departments of the provinces, municipalities, railways, banks, power companies, chambers of commerce, boards of trade, the Canadian Manufacturers' Association and other promotional agencies, and with trade commissioners and other Canadian Government offices abroad. Numerous inquiries from foreign concerns and individuals regarding the manufacture of new products in Canada under licence or royalty, and the placing of inventions are also processed.

Programs for the training of foreign technicians in Canada are instituted and carried out by the Division. During 1947 and 1948, Chinese were trained in Canadian industry and a similar program for East Indian trainees was in progress in 1949.

Working in collaboration with the Area Sections of the Canadian Trade Commissioner Service and the Export Division, the Industrial Development Division plans itineraries for visiting delegations and industrial technicians and, on occasion, sends an official to conduct the tour. Arrangements are made also for visiting foreign government officials, technicians, lecturers, scientists and students.

Included in the duties of this Division are: membership in various inter-departmental committees concerned with industrial studies, design and development, the processing of reparation plants and equipment, and the admission of German scientists to Canada for the benefit of Canadian industry. The Division also provides liaison with the War Assets Corporation in the disposal of surplus equipment and plants. Close co-operation is maintained with the Central Mortgage and Housing Corporation to aid in the development of the industrial townsite at Ajax, Ont. Every effort is made to maintain contact with new industries and to assist them in the solution of their problems and the development of plans for export.

**Publicity Division.**—The principal function of the Publicity Division is to furnish the commercial community of Canada with information concerning the assistance obtainable by exporters and importers from the Foreign Trade Service. This Division is responsible also for stimulating a better appreciation by the general public of the importance of trade to the welfare of Canada. The attention of exporters and potential exporters is directed to opportunities for the disposal of their products in markets abroad, and of importers to the sources of supply for raw materials and consumer goods unobtainable in this country. Its principal educational and informative medium is "Foreign Trade", the weekly publication of the Foreign Trade Service, in which are reproduced reports of Canadian Trade Commissioners on conditions in their respective territories, articles by Head Office personnel and economists of the Dominion Bureau of Statistics, news items and charts portraying trade trends. Press releases are prepared and distributed to newspapers at home, and material of a similar character despatched to Canadian Trade Commissioners for distribution to newspapers abroad. Pamphlets and brochures are prepared to supplement other information on foreign markets, sources of supply, documentation, regulations and trade restrictions. Assistance is rendered to correspondents of newspapers and periodicals at home and abroad in the preparation of articles pertaining to various phases of Canada's foreign trade. The educational and promotional work of this Division is supported by advertising at home and abroad. The daily press, periodicals and trade papers, as well as films and radio, are also employed. Although the Publicity Division is part of the Foreign Trade Service, its functions have been expanded to include assistance to the associated agencies of the Department of Trade and Commerce concerned with the development of foreign trade. For example, it handles publicity connected with the projects undertaken by the Canadian Government Exhibition Commission in this and other countries.

**Canadian Commercial Corporation.**—The Canadian Commercial Corporation was established on May 1, 1946, by Act of Parliament to assist in the development of trade between Canada and other nations, to assist persons in Canada to obtain goods and commodities from outside Canada, and to dispose of goods and commodities that are available for export from Canada.

By the terms of the Act, the Corporation assumed the whole of the undertaking of the Canadian Export Board, which was established by Order in Council P.C. 70, of Jan. 31, 1944. This agency was at that time carrying out procurement functions in Canada on behalf of foreign governments, the United Nations Relief and Rehabilitation Administration, and the Canadian Mutual Aid Board. As a result, the Corporation continued without interruption all procurement action being taken on Apr. 30, 1946, by the Canadian Export Board, and has continued to render similar services to a number of foreign governments, particularly those to which Canada has extended loans. In addition, the Corporation has been able to give assistance to Canadians in the procurement of goods from other countries where, by reason of regulations in those countries, it was necessary that transactions should be handled in whole or in part through a Government agency.

By Order in Council P.C. 314, of Feb. 5, 1947, the power, duty and function vested in the Minister of Reconstruction and Supply to purchase or produce munitions of war or supplies, as well as to construct or carry out projects required by the Department of National Defence, was transferred to the Minister of Trade and Commerce. In connection with this transfer, the Minister of Trade and Commerce was authorized to make use of the services of the officers and servants of the Canadian Commercial Corporation. Under this authority, the officers and employees of the Canadian Commercial Corporation have, since Feb. 1, effected all procurement for the Department of National Defence, acting as agents for the Minister of Trade and Commerce.

By an Act to amend the Canadian Commercial Corporation Act, assented to July 17, 1947, the Corporation, as such, was empowered to act as agent on behalf of the Minister of Trade and Commerce in carrying out the powers, duties and functions transferred to him under Order in Council P.C. 314.

The Corporation, therefore, has three separate but related functions. It acts as procurement agency in Canada for foreign governments; it is available to assist Canadian importers; and, in effect, it acts as agent for the Minister of Trade and Commerce in procurement for the Department of National Defence.

**Canadian Government Exhibition Commission.**—The Canadian Government Exhibition Commission by graphic media of all kinds publicizes Canada and helps to sell Canadian products abroad. Under the terms of reference, the Commission is solely responsible for the construction and administration of all government exhibits in International Expositions, Trade Fairs and displays outside Canada, in which the Canadian Government may decide to participate, and of all International Expositions and Trade Fairs sponsored by the Canadian Government which may be held in Canada. The Commission's first fulfilment of the latter half of this responsibility was the development of the Canadian International Trade Fair, held at Toronto in 1948 and again in 1949. Manufacturers and producers in Canada and other countries had an opportunity of displaying their products at this fair.

The Commission also co-operates with Canadian exporters in securing representation for goods at trade fairs and trade promotional displays and, on request, is prepared to advise individual Canadian companies in the preparation of their exhibits.

Though not a producer of literature itself, the distribution of large quantities of materials produced by other Canadian Government Departments and agencies is effected by the Commission at its various presentations.

**Wheat and Grain Division.**—Matters related to Canada's grain trade are handled by the Wheat and Grain Division. This Division assists foreign governments in purchasing Canadian wheat, flour and other cereals, and serves as liaison between the Department of Trade and Commerce and the Canadian Wheat Board.

**Export Credits.**—For the general purpose of protecting and expanding Canadian foreign trade interests, the Export Credits Insurance Act was passed in 1944, and amended in August, 1946, and May, 1948. This Act is in two parts; Part I incorporates the Export Credits Insurance Corporation, and Part II provides for loans or guarantees to governments of other countries or their agencies. In May, 1946, Parliament gave assent to the United Kingdom Financial Agreement Act making available a large credit to the United Kingdom. (See also p. 964.)

*Export Credits Insurance Corporation.*—Administered by a board of directors, including the Deputy Minister of Trade and Commerce, the Deputy Minister of Finance and the Governor of the Bank of Canada, the Export Credits Insurance Corporation insures exporters against losses arising from credit and political risks involved in the export or an agreement for the export of goods. Policies are generally issued on a yearly basis, covering exporters' sales to all countries. The main risks covered by Export Credits Insurance Policies include: insolvency or protracted default on the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation of an import licence or the imposition of restrictions on the importation of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country.

The insurance is available under two main classifications—general commodities and capital goods. Coverage for general commodities can be procured by exporters under two types of policies: (1) the Contracts Policy, which insures an exporter against loss from the time he books the order until payment is received or; (2) the Shipments Policy, obtainable at lower rates of premium and which covers the exporter from the time of shipment until payment is received.

Insurance of capital goods offers protection to exporters dealing in plant equipment, heavy machinery, etc., where extended credit for longer periods is often necessary. Specific policies are issued for transactions involving capital goods, but the general terms and conditions are the same as those applicable to policies for general commodities.

The Corporation insures exporters on a co-insurance basis up to a maximum of 85 p.c. of the gross invoice value of shipments. This co-insurance basis also operates in the distribution of recoveries obtained after payment of a loss, and these recoveries are shared by the Corporation and the exporter in the proportions of 85 and 15, respectively.

The Corporation from its inception to June 30, 1949, has issued policies having a total value of \$169,187,189. Claims paid to exporters covering losses sustained by them under the terms and conditions of their policies amounted to \$294,062. A great majority of these claims resulted from exchange transfer difficulties with relatively few arising from insolvencies.

Excess of income over expenditure to June 30, 1949, was \$794,795, which has, in accordance with the practice followed by the Corporation since it began operations, been added to its underwriting reserve.

*Loans to Britain and to Foreign Governments.*—The United Kingdom Financial Agreement Act approved the financial Agreement signed on Mar. 6, 1946, between the Government of Canada and the Government of the United Kingdom. Under this Agreement the Government of Canada extended to the United Kingdom a credit of \$1,250,000,000 to facilitate purchases of goods and services in Canada, to assist the United Kingdom to meet transitional post-war deficits in its current balance of payments, to maintain adequate reserves of gold and dollars, and to assume the obligations of multilateral trade.

Part II of the Export Credits Insurance Act, 1944, as amended, enabled the Governor in Council at any time before Jan. 1, 1948, on the recommendation of the Minister of Finance and the Minister of Trade and Commerce to authorize the Minister of Finance to enter into agreements with foreign governments or their agencies, at their request (a) to provide them with credits to enable them or any person ordinarily resident in such country to pay the cost of Canadian-produced goods or the cost of Canadian services, or (b) to purchase or guarantee securities issued by them for the purpose of making such payments, or (c) to guarantee obligations undertaken or guaranteed by such government or agency under contracts to purchase Canadian goods and services, if such action is deemed advisable for the purpose of facilitating and developing trade or any branch of trade between Canada and any other country.

The total Canadian post-war direct credits to the United Kingdom under the United Kingdom Financial Agreement Act and to other countries under Part II of The Export Credits Insurance Act are shown in Statement I, p. 901.

## Section 2.—The Development of Tariffs

A short sketch of trade and tariffs prior to Confederation is given at pp. 480-482 of the 1940 edition of the Year Book. The 1942 Year Book, at pp. 427-428, traces the development from Confederation to the adoption in 1904 of the present form of preferential tariff.

Owing to the limitations of space in the Year Book, it has been necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships at present in force, and to summarize as much as possible historical data and details of preceding tariffs, giving references to those editions of the Year Book where extended treatments can be found.

### Subsection 1.—The Canadian Tariff Structure

The Canadian Tariff consists mainly of three sets of rates, viz., Preferential, Most-Favoured-Nation, and General. British Preferential rates consisted at first (1898) of a remission of 25 p.c. of the duties ordinarily paid but later (1900) were advanced to 33½ p.c. and, after 1904, took the form of a specially low rate of duty on almost all imported dutiable commodities. This is the first broad category of the tariff structure and these rates are applied to specified goods from British countries if shipped direct to Canada. On certain goods special rates may be applied under the British Preferential tariff; these special rates are lower on those goods than the ordinary British Preferential scale.

The second scale is the Most-Favoured-Nation Tariff. These rates apply to goods from countries that have been accorded tariff treatment more favourable than the General Tariff but which are not entitled to the British Preferential rate. To certain

non-British countries, a special concession under the Most-Favoured-Nation rates may be granted and rates lower than the Most-Favoured-Nation apply by agreement.

The third class of duties is the General Tariff. This is levied on all imports that are not covered by Preferential or Most-Favoured-Nation rates.

British Preferential rates apply to all countries within the Commonwealth. They may, however, be modified downward in their application to specific countries when trade agreements are being revised or discussed between Canada and other Commonwealth countries. The whole tariff structure is very complicated. Almost every Budget that is brought down in the House of Commons changes the incidence of the tariff in some particulars. It would be impossible to attempt here a discussion of tariff schedules. The schedules and rates in force at any particular time may be obtained from the Department of National Revenue, which is responsible for administering the Canadian Tariff.

In all cases where the tariff applies, there are provisions for drawbacks of duty on imports of semi-processed goods used in the manufacture of products later exported. The purpose of these drawbacks is to give Canadian manufacturers a fair basis of competition with foreign producers of similar goods, where it is felt to be warranted. There is a second class of drawbacks known as 'home consumption' drawbacks; these apply mainly to imported materials used in the production of specified classes of goods manufactured for home consumption.

Too often one-sided competition arises out of unfair practices, such as dumping or the manipulation of exchange advantages. Wide powers have been given in certain instances to supplement tariff provisions. Thus, the Minister of National Revenue or, through him, the customs officials have at times been empowered to establish a 'fair market value' as a basis of applying duties to be collected. The term 'fair market value' is vague and open to various interpretations and has been frequently criticized but, in exceptional cases for which they are designed, such valuations have proved effective.

The exchange situation as it affects the Tariff is a different problem. A foreign currency that has become considerably depreciated in relation to the Canadian dollar enables the country concerned to export goods to Canada under a very definite advantage and customs officials have been given power, under conditions such as these, to value imports from such countries at a 'fair rate of exchange'. Much, of course, depends on the manner in which the above powers are applied by the administrative officials and their understanding of the reasons for their application and, while the powers of fixing 'fair market value' and 'fair rate of exchange' have been applied to meet extraordinary conditions in the past, these powers have now been modified by clauses in trade agreements drawn up with individual countries.

**The Tariff Board.**—The Tariff Board, constituted by The Tariff Board Act, 1931, consists of three members, one of whom is chairman and another vice-chairman. The duties and powers of the Board derive from three Statutes of Canada: the Tariff Board Act, the Customs Act, and the Excise Tax Act.

Under the Tariff Board Act the Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada or produced in Canada, are subject to or exempt from duties of customs or excise and on which the Minister of Finance desires information. The investigation into any such matter may include inquiry as to the effect that an increase or decrease of the existing rate of duty upon a given commodity might have upon industry or trade, and the extent to which

the consumer is protected from exploitation. It is also the duty of the Board to inquire into any other matter in relation to the trade and commerce of Canada that the Governor in Council sees fit to refer to the Board for inquiry and report. Usually the references take one of two forms: authority for review of sections of the Customs Tariff relating to an entire industry, or for investigation in respect of specified commodities. Under a provision of the Act reports are tabled in Parliament.

Under the provisions of the Customs Act and the Excise Tax Act, the Tariff Board is authorized to act as a tribunal to hear appeals from rulings of the Department of National Revenue in respect of matters of administration including those of excise taxes, tariff classification, value for duty, and drawback of customs duties. Declarations of the Board on appeals, based on findings of fact, have statutory force and effect with provision for appeal to the Exchequer Court of Canada in the case of decisions under the Customs Act. Tariff references and appeals receive public hearings at which interested parties submit oral statements and written briefs relating to matters under consideration.

### Subsection 2.—Tariff Relations with Other Countries

**General Agreement on Tariffs and Trade.**—Canada is one of 23 countries which became contracting parties to the General Agreement on Tariffs and Trade, negotiated at Geneva, Switzerland, in 1947. The original contracting parties were Australia, Belgium, Brazil, Burma, Canada, Ceylon, Chile, China, Cuba, Czechoslovakia, France, India, Lebanon, Luxembourg, The Netherlands, New Zealand, Norway, Pakistan, Southern Rhodesia, Syria, the Union of South Africa, the United Kingdom and the United States. Ten additional countries applied for accession to the agreement and negotiated with the original members at Annecy, France, in 1949. (See pp. 968-969.)

Pending formal ratification of the General Agreement, the 23 above-mentioned countries put it into provisional application early in 1948. Under this arrangement, they agreed to exchange certain specified tariff concessions, to give one another most-favoured-nation treatment in matters of trade, tariffs, and internal taxation, and to observe certain commercial provisions so far as these are not inconsistent with existing legislation.

The General Agreement on Tariffs and Trade was the result of international negotiations, begun during the War of 1939-45 and continued at London, Geneva, Havana and Annecy, over periods of many months, during the years 1946-49.

In December, 1945, the United States published a set of principles, entitled "Proposals for Expansion of World Trade and Employment". The United Kingdom expressed its agreement "on all important points in these proposals", accepted them as a basis for international discussion and undertook to use its best endeavours to bring such discussions to a successful conclusion. These proposals formed the basis of international discussions at London during October and November, 1946, by a Preparatory Committee, consisting of representatives of Australia, Belgium, Luxembourg, Brazil, Canada, Chile, China, Cuba, Czechoslovakia, France, India, Lebanon, The Netherlands, New Zealand, Norway, the Union of South Africa, the United Kingdom and the United States. As a result of this work, a draft charter for an International Trade Organization was completed at London and published by the United Nations in October, 1946.

The draft charter, further revised by a committee which met at Lake Success, New York, early in 1947, was the basic document submitted for consideration and elaboration at the second meeting of the Preparatory Committee at Geneva during the summer of 1947, and subsequently at Havana, Cuba, during the following winter. The document thus revised and amended was published on Mar. 24, 1948, as the "Havana Charter for an International Trade Organization". It will enter into effect if and when ratified by a sufficient number of governments as prescribed in Article 103 of the document itself.

At the Geneva Conference of 1947, concurrently with the revision of the draft charter, multilateral tariff negotiations were carried on by 23 countries. The object of these negotiations was to reduce tariffs on a reciprocal and multilateral basis in order to lower trade barriers. There were negotiations between 127 pairs of countries, by which 123 agreements were concluded. The results of these negotiations were embodied in the General Agreement on Tariffs and Trade. Since the charter was still in the draft stage and the International Trade Organization was not yet established, certain of the commercial provisions of the draft charter were incorporated with the tariff schedules in the General Agreement on Tariffs and Trade. The General Agreement is thus a substantive international agreement, independent of the draft charter, although it is provided that on the coming into force of the Charter certain parts and sections of the General Agreement will be superseded by the corresponding provisions of the Charter.

The General Agreement consists of three parts. Part I covers the results of the multilateral negotiations in 20 separate tariff schedules, together with the clauses providing for the exchange of multilateral Most Favoured-Nation treatment.

Part II constitutes a code of international conduct in respect to commercial policy, and covers such matters as national treatment regarding taxation and regulations, freedom of transit, anti-dumping duties, valuation for customs purposes, customs formalities, marks of origin, publication and administration of trade regulations, quantitative restrictions to safeguard the balance of payments, non-discriminatory administration of quantitative restrictions, exchange arrangements, subsidies, purchasing by state-trading enterprises, economic development, and several other commercial matters. These provisions were taken from the draft charter and embodied in the General Agreement.

Part III of the General Agreement relates to its administration.

The Protocol of Provisional Application to the General Agreement had been signed by the middle of 1948, and the general provisions and concessions put into effect by practically all the 23 countries which participated in the conference. Australia, Belgium, Canada, Cuba, France, Luxembourg, The Netherlands, the United Kingdom and the United States signed before Jan. 1, 1948. Czechoslovakia signed on Mar. 20, 1948, followed by China on Apr. 21, South Africa on May 14, India on June 9, Norway on June 10, Southern Rhodesia on June 11, Burma, Ceylon and Lebanon on June 29, and Brazil, New Zealand, Pakistan and Syria on June 30. Chile was granted an extension and did not sign until Feb. 14, 1949. By signing the Protocol, each country committed itself to bring into force Part I (including the tariff schedules), Part II (to the fullest extent not inconsistent with existing legislation), and Part III of the Agreement.

The duration of the General Agreement is for three years but it contains the usual provisions for continuance after Jan. 1, 1951, subject to six months notice of termination. (For more detail regarding the Geneva negotiations and concessions see pp. 873-877 of the 1948-49 edition of the Year Book.)

The draft of the Charter prepared during the Geneva conference in 1947 prepared the way for the full United Nations Conference on Trade and Employment, held at Havana, Cuba, from November, 1947, until the end of March, 1948. At this meeting, further changes in drafting were made since many nations were participating for the first time in this work and presented new points of view. Of the 56 nations at Havana, 53 signed the final Act which authenticated the text of the Charter.

Article 103 of the Charter provides that the International Trade Organization shall be brought into existence if a majority of the signatures to the Final Act have deposited instruments of acceptance by March, 1949, or, failing this, when 20 acceptances have been made. Since neither of these two provisions had been fulfilled the Charter had not entered into force by the end of 1949.

Since the object of the General Agreement is to expand trade on a multilateral basis, invitations were sent out in the autumn of 1948 by the contracting parties to a number of other countries asking them to participate in the General Agreement on Tariffs and Trade. Eleven of these countries accepted the invitation and in April, 1949, they met with the contracting parties at Annecy, France, to carry out tariff negotiations. The acceding countries were Colombia, Denmark, the Dominican Republic, Finland, Greece, Haiti, Italy, Liberia, Nicaragua, Sweden and Uruguay. During the course of the conference, Colombia found it necessary to suspend its negotiations until a later date.

The negotiations at Annecy were conducted between each of the existing contracting parties and the acceding governments. The latter group also negotiated with one another. In all, 140 negotiations between pairs of countries were carried out. As at Geneva, the resulting tariff concessions apply to all members of the General Agreement on Tariffs and Trade under most-favoured-nation provisions. Canada carried on negotiations with all the acceding countries and concluded agreements with each.

Before an acceding country can become a contracting party it must receive the approval of two-thirds of the existing contracting parties. Approval is signified by signing the "Annecy Protocol of Terms of Accession to the General Agreement on Tariffs and Trade" on behalf of each new country. When the two-thirds majority have signed on behalf of a country, it becomes a full-fledged member, provided that it has itself signed the protocol. The opening date for signature was Oct. 10, 1949, and Canada, the United Kingdom and the United States signed on that date on behalf of all the ten new countries.

The Annecy Schedules come into force for each country when it gives notification of its intention to bring them into effect. This step must be taken by Apr. 30, 1950. There is a 30 days delay between the time of notification and the date when the schedule comes into force.

The new schedules contain a large number of tariff concessions of importance to Canada. The most important of these are as follows:—

*Denmark.*—Denmark, which already had a low tariff, agreed to reduce its duties on lobster; crayfish; shrimps; fresh, salted or canned salmon; and artificial silk stockings.

*Dominican Republic.*—The Dominican Republic reduces its rates on lamps and lanterns and their parts, copper wire, aluminum bars, sheets, wire and powder, radios, machines for harvesting sugar cane, herring, mackerel and other fish in brine, whisky, and incandescent mantles for lamps.

*Finland.*—This country reduces its rates on clover seed, whisky, chemicals and medicaments, aluminum powder, and electrical equipment.

*Greece.*—Greece reduces its duties on meat, concentrated milk, herrings, lobster, sardines, wheat flour, whisky, gin, cocoa, box shooks, plywood, asbestos, agricultural machinery, nickel, aluminum, calcium carbide, cod-liver oil, paper pulp, wrapping paper, rubber belting, rubber tires, and inner tubes.

*Haiti.*—Haiti made reductions on aluminum articles, patent medicines, cod-liver oil, soap powders, extracts and perfumes, printed advertisements, radios and parts, sewing machines, apples, cheese, kippered herrings, canned salmon, sardines, hats, and incandescent mantles.

*Italy.*—This country reduces duties on herrings, codfish, stockfish, seed potatoes, apples, wheat, rye, oatmeal, canned meat and vegetables (mixed), canned salmon, sardines, kippered herrings, kipper snacks, mackerel and lobster, polystyrene, sawn lumber of conifers, asbestos cords and threads, brake linings, and several types of agricultural machinery in which Canada has an export interest.

*Liberia.*—This country reduces its duties on meat and fish, dried eggs, plywood, lamps and lanterns, agricultural machinery, insecticides, fertilizers and toilet preparations.

*Nicaragua.*—Nicaragua reduces its rates on patent medicines, newsprint, plywood, oatmeal and whisky.

*Sweden.*—Sweden, which already had a low tariff, reduces its rates on tomato puree, apples, pears, sauces, vitamin concentrates, and nylon stockings.

*Uruguay.*—Uruguay reduces its rates on apples, cardboard, paper (except newsprint), zinc, harvesters, typewriters, adding machines, cash registers, industrial machinery, washing and ironing machines.

Among the numerous tariff concessions granted by existing parties to the General Agreement, which are of actual or potential value to Canada, may be mentioned reduced United States duties on hollow bars and drill steel, forgings, wallboard, paperboard and pulpboard, wrapping paper, miscellaneous manufactures of paper, plywood of birch and alder, wood manufactures, butter, Oka cheese, leather manufactures, hides, footwear with fabric uppers, cellulose compounds, granite and limestone. Czechoslovakia is reducing duties on seed barley and oats, apples, sardines, herring and dried milk. France is reducing its duties on plywood, softwood lumber, seed barley and oats, honey, horses, horse meat, newsprint and corrugated paper. Norway is reducing its duties on electric motors and limiting for a further period the protection that may be accorded to domestic wheat through the operations of the State grain monopoly.

Concurrent with the tariff negotiations, the contracting parties also held sessions to examine matters arising out of the general provisions of the General Agreement on Tariffs and Trade. The first session was held at Havana, Cuba, immediately after the completion of the drafting of the Charter. The second session took place at Geneva during August and September, 1948, and the third session at Annecy, France, in April, 1949.

At the third session, a considerable number of matters affecting trade were studied in detail. Among the more important of these was the examination of statements submitted in support of measures notified under Article XVIII of the General Agreement on Tariffs and Trade. This article pertains to trade restrictions imposed in connection with governmental assistance for economic development. Special exchange agreements for contracting parties, which are not members of the International Monetary Fund were also discussed.

**Other Tariff Relations.**—Apart from the agreements concluded at Annecy and Geneva, Canada has numerous reciprocal tariff arrangements with both Commonwealth and foreign countries. These consist of:—

- (1) application to Canada of some old commercial treaties of the United Kingdom;
- (2) participation in commercial treaties of the United Kingdom by Canadian Acts of Parliament or Orders in Council;
- (3) Canadian Conventions of Commerce or Trade Agreements; and
- (4) exchanges of notes respecting tariff matters.

Although Canada has extended preferential tariff rates to the United Kingdom since 1897, it was not until after the First World War that the first most-favoured-nation agreements were concluded between Canada and foreign countries. In 1922, a Franco-Canadian agreement was signed and, although it did not grant most-favoured-nation treatment as such to France, its provisions were very similar. The following year a most-favoured-nation treaty, including schedules of concessions, was concluded with Italy. As Canada's position as a world trader grew in importance agreements were signed with 32 countries. A number of these lapsed during the War and have not been replaced by new agreements.

Although Canada's trade in many parts of the world was interrupted during the War, nevertheless, it expanded in some areas even during this period, and new commercial agreements were entered into with the Dominican Republic, Paraguay, Venezuela, and Ecuador. Since the end of the War, most-favoured-nation agreements have been made with Turkey, Greece, Italy, China, Nicaragua, Germany and Austria.

Many of Canada's bilateral trade treaties are simply exchanges of most-favoured-nation treatment and do not include schedules of tariff concessions. There are several cases, however, where schedules of tariff concessions have been negotiated and are incorporated into the agreement. The Canada-United States trade treaties of 1935 and 1938 are examples of this type. The benefit received by Canadian exports under most-favoured-nation treatment in any country depends on the tariff and treaty system of the country in question. Some countries possess a single-column tariff and extend any concessions that they may make to all countries without discrimination. Other countries have minimum, intermediate and maximum rates, and their most-favoured-nation rates may be either the minimum or intermediate schedules. In other instances, most-favoured-nation treatment may be subject to certain reservations, such as the withholding of preferential rates granted by one State to another on historical, political or geographical grounds.

The Canadian Tariff Act of 1898 established a purely British preferential column in the Canadian tariff. Since that time, Canada has continued to grant preferential tariff rates on a considerable number of items to many parts of the Commonwealth. In return, a number of Canadian goods receive preferential tariff treatment in most Commonwealth countries.

The United Kingdom introduced preferences in 1919 on the limited number of products then subject to customs duties. With the expansion of the United Kingdom tariff, preferences granted by that country were extended to more commodities. Under the terms of the Ottawa Agreement, signed on Aug. 20, 1932, Canadian goods were exempted from the payment of duties under the Import Duties Act, which imposed duties on a large number of items entering the United Kingdom. This exemption was continued under the Canada-United Kingdom Agreement of 1937, which with certain modifications is still in effect. Canada exchanges preferential rates with several of the self-governing countries of the Commonwealth under Agreements with Australia (1931), New Zealand (1932) and the Union of South Africa (1932). An Agreement with the British West Indies was concluded in 1925.

The following list gives the tariff arrangements in which Canada was participating in October, 1949:—

### Commonwealth Countries

Country	Treaty or Convention	Terms
UNITED KINGDOM.....	Trade Agreement signed Feb. 23, 1937; in force Sept. 1, 1937. Modified by an Exchange of Letters, Nov. 16, 1938, resulting from United Kingdom-United States Trade Agreement of Nov. 17, 1938. Further modified by General Agreement on Tariffs and Trade and Exchange of Notes, Oct. 30, 1947.	Various concessions by both countries, including exchange of lowest tariff rates (some reservations by Canada) and binding against increase of scheduled preferential duties. Extends also to Colonial Empire. Exchange of Notes, 1947, continues in force until Jan. 1, 1951, and thereafter until terminated on six months notice.
IRELAND.....	Trade Agreement signed Aug. 20, 1932; in force Jan. 2, 1933.	Canada concedes British Preferential Tariff in return for most-favoured-nation treatment in Ireland. Made for five years and thereafter until terminated on six months notice.
AUSTRALIA.....	Trade Agreement signed July 8, 1931; in force Aug. 3, 1931. Supplemented by General Agreement on Tariffs and Trade.	Each country accords the other reduced rates on schedules of goods, and otherwise (with a few exceptions in Australia) exchange their British Preferential Tariffs with each other. Made for one year and thereafter until terminated on six months notice. Preferences modified by General Agreement on Tariffs and Trade.
NEW ZEALAND.....	Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. Supplemented by General Agreement on Tariffs and Trade.	Exchange specific preferences on scheduled goods and otherwise concede British Preferential Tariffs reciprocally. Made for one year, but kept in force by short-term extensions. Since Sept. 30, 1941, in force until terminated on six months notice.

## Commonwealth Countries—concluded

Country	Treaty or Convention	Terms
UNION OF SOUTH AFRICA.	Trade Agreement signed Aug. 20, 1932; in force Oct. 13, 1932. Supplemented by General Agreement on Tariffs and Trade.	Agreement extends list of preferences formerly exchanged in absence of formal Agreement. Made for five years and thereafter until terminated on six months notice.
SOUTHERN RHODESIA..	Preferences granted modified by the General Agreement on Tariffs and Trade. Protocol of Provisional Application signed June 11, 1948. (The reduced duty rates were brought into force on May 19, 1948.)	A Trade Agreement of Aug. 20, 1932, terminated on Jan. 2, 1938, on notice from Southern Rhodesia; Canada continued to grant British Preferential Treatment and Southern Rhodesia tariff preferences granted other Dominions. Modified by General Agreement on Tariffs and Trade. G.A.T.T. provisions continue in force until Jan. 1, 1951, and thereafter until terminated on six months notice.
INDIA.....	Existing tariff treatment modified by the General Agreement on Tariffs and Trade. Protocol of Provisional Application signed June 8, 1948, provisionally brought into force July 8, 1948.	Canada accords India British Preferential treatment; India grants no tariff preferences to Canada. Modified by General Agreement on Tariffs and Trade. G.A.T.T. provisions continue in force until Jan. 1, 1951, and thereafter until terminated on six months notice.
PAKISTAN.....	Existing tariff treatment modified by the General Agreement on Tariffs and Trade. Protocol of Provisional Application signed June 30, 1948, provisionally brought into force July 30, 1948.	Canada grants Pakistan British Preferential treatment; Pakistan grants no tariff preferences to Canada. Modified by General Agreement on Tariffs and Trade. G.A.T.T. provisions continue in force until Jan. 1, 1951, and thereafter until terminated on six months notice.
CEYLON.....	Exchange of Preferential Tariffs. Modified by the General Agreement on Tariffs and Trade. Protocol of Provisional Application signed June 29, 1948, provisionally brought into force July 29, 1948.	Preferential Tariff treatment modified by General Agreement on Tariffs and Trade. G.A.T.T. provisions continue in force until Jan. 1, 1951, and thereafter until terminated on six months notice.
BRITISH WEST INDIES.	Trade Agreement signed July 6, 1925; in force Apr. 30, 1927. Supplemented by General Agreement on Tariffs and Trade.	Exchange of specific margins of preferences. Made for twelve years and thereafter until terminated on one year's notice. A Canadian notice of Nov. 23, 1938, terminating the Agreement, was replaced by one of Dec. 27, 1939, continuing the Agreement subject to termination on six months notice.

## Non-Commonwealth Countries

Country	Treaty or Convention	Terms
ARGENTINA.....	Trade Agreement signed Oct. 2, 1941; provisionally brought into force Nov. 15, 1941.	Exchange of most - favoured - nation treatment. Provisional application may be terminated on three months notice. To come into force definitively 30 days after exchange of ratification for two years and thereafter until terminated on six months notice.
AUSTRIA.....	By Order in Council, Canada extends to Austria most-favoured-nation treatment, effective Sept. 7, 1949. Austria also grants most - favoured - nation treatment to Canada. This arrangement was made without exchange of notes or other formal agreement.	
BENELUX (BELGIUM, LUXEMBOURG AND THE NETHERLANDS) BELGIAN COLONIES, SURINAM AND CURAÇAO.	General Agreement on Tariffs and Trade. Protocol of Provisional Application signed Oct. 30, 1947, and provisionally brought into force Jan. 1, 1948.	Exchange of most - favoured - nation treatment including scheduled concessions. <sup>1</sup>
BOLIVIA.....	Order in Council of July 20, 1935, accepted Article 15 of the United Kingdom - Bolivia Treaty of Commerce of Aug. 1, 1911.	Exchange of most - favoured - nation treatment. May be terminated on one years notice.
BRAZIL.....	Trade Agreement signed Oct. 17, 1941; provisionally in force from date of signing and definitively on Apr. 16, 1943. Supplemented by General Agreement on Tariffs and Trade, Protocol of Provisional Application signed June 30, 1948.	Exchange of most - favoured - nation treatment. Made for two years from Apr. 16, 1943, and thereafter for one-year periods until terminated on six months notice. <sup>1</sup>
BURMA.....	General Agreement on Tariffs and Trade. Protocol of Provisional Application signed June 29, 1948.	Exchange of most - favoured - nation treatment. <sup>1</sup>
CHILE.....	Trade Agreement signed Sept. 10, 1941; in force provisionally Oct. 15, 1941, and definitively on Oct. 29, 1943. Supplemented by General Agreement on Tariffs and Trade. Protocol of Provisional Application signed Feb. 14, 1949.	Exchange of most - favoured - nation treatment. Made for two years from Oct. 29, 1943, and thereafter until terminated on six months notice. <sup>1</sup>
CHINA.....	<i>Modus v'vendi</i> signed Sept. 26, 1946; in effect Sept. 28, 1946. Supplemented by General Agreement on Tariffs and Trade. Protocol of Provisional Application signed Apr. 21, 1948.	Exchange of most - favoured - nation treatment. Made for one year and thereafter until terminated on three months notice.

## Non-Commonwealth Countries—continued

Country	Treaty or Convention	Terms
COLOMBIA.....	Treaty of Commerce with United Kingdom of Feb. 16, 1866, applies to Canada. A Trade Agreement between Colombia and Canada was signed Feb. 20, 1946, but has not been put into force.	Exchange of most-favoured-nation treatment. Protocol of Aug. 20, 1912, provides means for separate termination by Dominions on one years notice. Exchange of Notes Dec. 30, 1938, continued Treaty in force until Sept. 30, 1939, and thereafter until terminated on three months notice.
COSTA RICA.....	Exchange of Notes with United Kingdom of Mar. 1-2, 1933, and Canadian Order in Council of July 20, 1935.	Exchange of most-favoured-nation treatment.
CUBA.....	General Agreement on Tariffs and Trade. Protocol of Provisional Application signed Oct. 30, 1947, and provisionally brought into force Jan. 1, 1948.	Exchange of most-favoured-nation treatment including scheduled concessions. <sup>1</sup>
CZECHOSLOVAKIA.....	Convention of Commerce signed Mar. 15, 1928, in force Nov. 14, 1928. Supplemented by General Agreement on Tariffs and Trade. Protocol of Provisional Application signed Mar. 20, 1948, by Czechoslovakia.	Exchange of most-favoured-nation treatment. Made for four years and thereafter until terminated on one years notice.
DENMARK.....	Treaties of Peace and Commerce with United Kingdom of Feb. 13, 1660-61, and July 11, 1670, apply to Canada. <sup>2</sup>	Exchange of most-favoured-nation treatment. Declaration of May 9, 1912, provides means for separate termination by Dominions on one years notice. <sup>2</sup>
DOMINICAN REPUBLIC	Trade Agreement signed Mar. 8, 1940; in force provisionally Mar. 15, 1940, and definitively Jan. 22, 1941. <sup>2</sup>	Exchange of most-favoured-nation treatment. Made for three years from Jan. 22, 1941, and thereafter until terminated on six months notice. <sup>2</sup>
ECUADOR.....	<i>Modus vivendi</i> by Exchange of Notes of Aug. 26, 1941; in force Oct. 1, 1941.	Exchange of most-favoured-nation treatment. Made for an indefinite period subject to termination on three months notice.
EL SALVADOR.....	Exchange of Notes of Nov. 2, 1937; in force Nov. 17, 1937.	Exchange of most-favoured-nation treatment. Made for one year and thereafter until terminated on four months notice. <sup>2</sup>
FINLAND.....	By Order in Council Canada has extended most-favoured-nation treatment to Finland since Nov. 17, 1948. Finland gives most-favoured-nation treatment to Canada. <sup>2</sup>	

For footnotes see p. 977.

## Non-Commonwealth Countries—continued

Country	Treaty or Convention	Terms
FRANCE AND COLONIES	General Agreement on Tariffs and Trade. Protocol of Provisional Application signed Oct. 30, 1947, and provisionally brought into force Jan. 1, 1948.	Exchange of most-favoured-nation treatment including scheduled concessions. <sup>1</sup>
GERMANY.....	Agreement between responsible authorities for Western Germany and Canada, signed Oct. 14, 1948. Various other Allied Nations also adhere to this agreement.	Exchange of most-favoured-nation treatment. In force until Jan. 1, 1951, but may be terminated before then on six months notice.
GREECE.....	<i>Modus vivendi</i> by exchange of notes of July 28, 1947; effective Aug. 28, 1947. <sup>2</sup>	Exchange of most-favoured-nation treatment. Made for a period of one year and thereafter unless terminated on three months notice. <sup>2</sup>
GUATEMALA.....	Trade Agreement signed Sept. 28, 1937; in force Jan. 14, 1939.	Exchange of most-favoured-nation treatment. Made for three years and thereafter until terminated on six months notice.
HAITI.....	Trade Agreement signed Apr. 23, 1937; in force Jan. 10, 1939. <sup>2</sup>	Exchange of most-favoured-nation treatment. Made for one year and thereafter until terminated on six months notice. <sup>2</sup>
ITALY.....	Italian Peace Treaty, Feb. 10, 1947. Canadian Order in Council, Feb. 24, 1948; effective Feb. 20, 1948. <sup>2</sup>	For a period of eighteen months following the signing of the Italian Peace Treaty on Feb. 10, 1947. Italy was obligated to grant most-favoured-nation rates to Canada on a reciprocal basis. <sup>2</sup>
LEBANON.....	Special Arrangement by Order in Council of Nov. 19, 1946. Supplemented by General Agreement on Tariffs and Trade. Protocol of Provisional Application signed June 29, 1948.	Exchange of most-favoured-nation treatment. <sup>1</sup>
LIBERIA.....	2	2
MEXICO.....	Trade Agreement signed Feb. 8, 1946; in force provisionally same date. Ratifications exchanged on May 6, 1947.	Exchange of most-favoured-nation treatment. Entered into force definitively 30 days after exchange of ratifications for two years and thereafter until termination on six months notice.
NICARAGUA.....	Trade Agreement signed Dec. 19, 1946, in force provisionally same date. <sup>2</sup>	Exchange of most-favoured-nation treatment. Provisional application may be terminated on three months' notice. To come into force definitively 30 days after exchange of ratifications for one year and thereafter until terminated on six months notice. <sup>2</sup>

For footnotes see p. 977.

## Non-Commonwealth Countries—continued

Country	Treaty or Convention	Terms
NORWAY.....	Convention of Commerce and Navigation with United Kingdom of Mar. 18, 1826, applies to Canada. Supplemented by General Agreement on Tariffs and Trade. Protocol of Provisional Application signed June 10, 1948.	Exchange of most-favoured-nation treatment. Convention of May 16, 1913, provides means for separate termination by Dominions on one years notice. <sup>1</sup>
PANAMA.....	Order in Council of July 20, 1935, accepted Article 12 of the United Kingdom — Panama Treaty of Commerce of Sept. 25, 1928.	Exchange of most-favoured-nation treatment. In force until terminated on one years notice.
PARAGUAY.....	Exchange of Notes of May 21, 1940, in force June 21, 1940.	Canadian Intermediate Tariff exchanged for most-favoured-nation treatment in Paraguay. In force until terminated on three months notice.
POLAND.....	Convention of Commerce signed July 3, 1935; in force Aug. 15, 1936.	Exchange of most-favoured-nation treatment and special reductions for limited lists of goods. Made for one year and thereafter until terminated on three months notice.
PORTUGAL, INCLUDING MADEIRA, PORTO SANTO, AND AZORES.	Trade Agreements Act of June 11, 1928, accepted Article 21 of the United Kingdom — Portugal Treaty of Commerce of Aug. 12, 1914; in force Oct. 1, 1928.	Exchange of most-favoured-nation treatment. In force until terminated on one years notice.
SPAIN.....	Spanish Treaty Act of June 11, 1928, sanctioned United Kingdom — Spain Treaty of Commerce of Oct. 31, 1922 (revised Apr. 5, 1927); in force Aug. 1, 1928.	Exchange of most-favoured-nation treatment. In force until terminated on six months notice.
SWEDEN.....	United Kingdom — Sweden Convention of Commerce and Navigation of Mar. 18, 1826, applies to Canada. <sup>2</sup>	Exchange of most-favoured-nation treatment. In force until terminated on one years notice. Declaration of Nov. 27, 1911, provides means for separate termination by Dominions on one years notice. <sup>2</sup>
SWITZERLAND.....	United Kingdom — Switzerland Treaty of Friendship, Commerce and Reciprocal Establishment of Sept. 6, 1855, applies to Canada. By exchange of notes Liechtenstein included under terms of this agreement, effective Aug. 21, 1947.	Exchange of most-favoured-nation treatment. In force until terminated on one years notice. Convention of Mar. 30, 1914, provides means for separate termination by Dominions on one years notice.
SYRIA.....	Special Arrangement by Order in Council of Nov. 19, 1946. Supplemented by General Agreement on Tariffs and Trade. Protocol of Provisional Application signed June 30, 1948.	Exchange of most-favoured-nation treatment. <sup>1</sup>

For footnotes see p. 977.

## Non-Commonwealth Countries—concluded

Country	Treaty or Convention	Terms
TURKEY.....	Exchange of Notes signed Mar. 1, 1948.	Exchange of most - favoured - nation treatment. In effect for one year and thereafter until terminated on three months notice.
UNITED STATES.....	The General Agreement on Tariffs and Trade. Protocol of Provisional Application signed Oct. 30, 1947; entered into force provisionally Jan. 1, 1948.	Exchange of most - favoured - nation treatment including scheduled concessions. If at any time General Agreement on Tariffs and Trade is set aside, the Trade Agreement signed Nov. 17, 1938, will again come into effect.
URUGUAY.....	Trade Agreement signed Aug. 12, 1936; in force May 15, 1940. <sup>2</sup>	Exchange of most - favoured - nation treatment. Made for three years and thereafter until terminated on six months notice. <sup>2</sup>
VENEZUELA.....	<i>Modus vivendi</i> signed Mar. 26, 1941; in force Apr. 9, 1941.	Exchange of most - favoured - nation treatment. Made for one year subject to renewal or termination on three months notice; renewed annually by Exchange of Notes, subject to termination on three months notice. Not renewed by Venezuela on Apr. 9, 1949.
YUGOSLAVIA.....	Trade Agreements Act of June 11, 1928, accepted Article 30 of United Kingdom-Serb-Croat-Slovene Treaty of Commerce and Navigation of May 12, 1927; in force Aug. 9, 1928.	Exchange of most - favoured - nation treatment. In force until terminated on one years notice.

<sup>1</sup> General Agreement on Tariffs and Trade in force until Jan. 1, 1951, and thereafter until terminated on six months notice.

<sup>2</sup> This country has applied for accession to the General Agreement on Tariffs and Trade and participated in the tariff negotiations held at Annecy, France, where schedules of concessions were exchanged with Canada. Jan. 1, 1950, is the earliest date on which Canada may become a contracting party and its schedule of concessions enter into force.

### THE ROYAL COMMISSION ON PRICES†

The Royal Commission on Prices was appointed in July, 1948, under the chairmanship of Professor C. A. Curtis of the Department of Economics, Queen's University. Its function was to continue the inquiry, begun by the House of Commons Select Committee on Prices, on the causes of the rise in the cost of living. The Commission held 77 public hearings and examined 179 witnesses drawn from trades and industries across Canada. In addition, 12 national organizations covering wide fields of social and economic activity were asked to submit briefs. The findings of the Commission are contained in a three-volume report which was tabled in the House of Commons on Apr. 8, 1949. Volume I of the Report contains a summary of the other volumes and some general observations and suggestions. Volume II contains an analysis of various factors affecting the rise in prices and Volume III deals with each of 10 industries or commodities investigated and surveys consumer credit.

The Commission found that, "in the main, the post-war price rise in Canada was a consequence of the War, of rising prices abroad, of large export demands financed to some degree by the Canadian Government, and of the capital boom". Fiscal and monetary measures and direct controls offset these forces to some extent and, outside of exceptional cases, the behaviour of particular industries, individuals or groups was not found to be a main cause of rising prices.

**Price Control and Rationing.**—The stability of consumer prices during the War was achieved, to some extent, by the timely introduction of a price ceiling late in 1941. Other factors contributing to the same effect were high rates of taxation which kept down consumer spending, taxes on corporations, wage and salary controls, export controls, import subsidies, foreign exchange control and the introduction of price controls in the United States. The Commission found much evidence to support the withdrawal of price control after the close of hostilities.

The Commission found that selective, rather than general, price control might be justified under exceptional circumstances for a temporary period but it was found to be doubtful that selective price control has much to recommend it in ordinary

\* Except as otherwise credited, this Chapter has been revised in the Prices Section, Labour and Prices Division of the Dominion Bureau of Statistics.

† Summarized from the "Report of the Royal Commission on Prices" in 3 Vols. Price \$2. Obtainable from the King's Printer, Ottawa.

times. It concluded: (a) general price control should not be relied upon for stabilizing prices, and (b) "price control in any form is no substitute for action designed to bring over-all demand into line with over-all supply. It disguises inflation and fails to remove the cause of the trouble".

**External Influences.**— "Foreign prices" the Commission noted "affect Canadian prices most directly through the purchase by Canadians of goods produced outside the country and through the impact on domestic prices of the prices received by Canadians for the goods they export." The import content of goods purchased by Canadians is about 30 p.c.; for capital goods and equipment the percentage is possibly higher. The United States lifted controls in the summer of 1946 and the wholesale index in the United States rose by 35 p.c. in the period May, 1946-March, 1947, the consumer price index rising by 19 p.c. In the same period the Canadian wholesale index rose by 10 p.c. and the cost of living by less than 6 p.c. These Canadian advances would have been higher had it not been for the action of the Government in appreciating the Canadian dollar to parity, in retaining price controls and subsidies on imported and domestic commodities, and in retaining embargoes. Imports also showed a much lower rate of price advance than did United States prices generally and, as a result of the use of bulk contracts with the United Kingdom, export prices rose by only 14 p.c. The Commission was convinced that "in view of the intimate relationship between the economies of the two countries, prices in Canada could only have been insulated by an elaborate and continuing system of export controls or by a government monopoly of selling and by a very complicated system of import subsidies and import allocations or by a government monopoly of buying".

The dollar shortage also contributed to rising prices by the use of domestic substitutes or similar goods obtained from other countries. Larger exports to the United States to improve the dollar position resulted in many instances in increased prices in Canada.

Finally, the decision to extend loans and credits to other countries added to demand without adding to supply, thereby contributing to inflationary tendencies.

**The Investment Boom.**—Post-war capital expenditures have been larger in both dollar amounts and in physical terms than in any other period of Canadian history. Investment expenditures by government did not account for much of this expenditure despite the construction of schools, hospitals, etc. The chief elements were the high level of housing construction and of business investment expenditures to make good deficiencies of the depression and war periods, to enlarge productive capacity and to take advantage of favourable financial conditions, but it is very difficult to determine how important the making of investment expenditures, at the same time as Canada was bidding for resources for other purposes, has been in relation to other price-raising factors.

**Fiscal and Monetary Policy.**—While Canadian fiscal policy during the inflationary period was similar to that followed in the United States and the United Kingdom, the Commission felt that it probably reflected public thinking and discussion, which seemed more concerned about recession than post-war inflation. Nevertheless, the Government "made a determined effort to pay for a high proportion of the costs of the War out of taxes and to finance the rest by methods calculated to reduce the volume of spending". There remained in the hands of the public a large volume of liquid savings which added to the difficulty of keeping the post-war inflation

in check. Special tax concessions to business to encourage capital expenditures, low interest rates and a high rate of spending on current consumption made some inflation inevitable. The Commission was of the opinion that taxes might have been maintained at a somewhat higher rate, though prices would doubtless still have risen albeit at a lower rate of increase.

**Prices and Wages.**—The Commission observed that wages are, in truth, a varying part of total costs of production but higher wages do not necessarily mean higher labour costs per unit of output. Much depends on productivity. "When prices and wages were decontrolled after the War, the average rate of increase in wage rates roughly paralleled the increase in the cost of living, so that real wages changed but little." Taking into account the post-war reduction in income taxes the Commission thought it "probable that most workers are as well off as they were in 1945".

**Prices and Corporate Profits.**—The Commission found that profits reported by Canadian corporations, though somewhat larger in recent years, "contain an element of what is essentially an inventory profit arising from the particular method commonly used in valuing inventories". They also tend to be somewhat overstated because the allowances made for depreciation are probably insufficient to replace, at to-day's cost, the capital which has worn out during the year. Corporate profits have also been increased by extremely profitable sales abroad, and to that extent do not form part of the domestic price. Looking at corporate profits as a whole the Commission did not conclude that "the raising of prices to earn exceptionally high profits was general, or played a major part in the rise in prices since the end of the War".

**Agricultural Prices.**—Agricultural prices have risen more rapidly than prices in general since 1939 but, since the end of the War, farm products prices have risen less than prices of most other groups in the wholesale index. The chief explanation for this lies in the removal of food subsidies which kept food prices down during the War. Farm prices moved upward in response to the acute world shortage of food, an aftermath of the War. Food contracts with the United Kingdom and restrictions on exports to the United States kept Canadian prices from rising to the levels prevailing in export markets.

**The Effect of Mark-ups and Margins on Prices.**—It was general for the distributive trades to maintain the same fixed percentage mark-ups on their various lines of merchandise as their costs rose. This, the Commission felt, increased prices to the consumer much more than a dollar and cent mark-up would have done. One reason given for this was that it is a convenient and quick pricing procedure. The claim was also made that other operating expenses rise in a period when the cost of merchandise is rising and that this procedure is used as a hedge against inventory losses when prices decline. The Commission found it "difficult to justify the augmented dollar profits made by distributors who invariably maintain the same percentage mark-up as when their rate of stock turnover was lower . . . . The increased rate of stock turnover during the War and post-war years, combined with a comparatively small number of mark-downs, would" the Commission felt "have made it possible for the distributive trades to take a lower percentage mark-up and still realize larger net profits in dollar terms".

**Restrictive Business Practices.**—Among the industries examined, the Commission found a number where conditions were highly competitive. There were a few where there was little competition. "More significant is the growing tendency towards monopolistic competition through brand names and special advertising, price leadership by a few large firms . . . and resale price maintenance (by the manufacturer) . . . . The experiences and influences of the war period created conditions conducive to the spread of patterns of behaviour from which active price competition is excluded." The Commission did not find monopolistic practices, however, to be a major factor in the recent rise in prices.

**Prices of Individual Staple Commodities.**—The following ten commodities were those in which "some substantial price increases took place during the past two years":—

*Bread.*—"The tendency among large multiple bakeries has been to minimize price competition and to use expensive sales promotion and advertising". Many of them use retail price maintenance. Margins guaranteed to retailers seemed to the Commission to be out of proportion to the margins that would exist under competitive conditions. "If retailers had greater freedom to compete . . . lower priced bread might have a . . . significant effect on the general price level". The Commission questioned whether the removal of the price ceiling and delayed adjustments in other costs justified increases in prices.

*Butter.*—The removal of the subsidy in 1947 brought about an expected increase of about 10 cents per lb. The lifting of the subsidy on coarse grains also caused a rise in prices but the predominant factor in the price rise was consumer demand.

*Live Stock and Meat.*—The sharply increased prices of pork and beef in 1948 were found to be due largely to external influences. The price of pork was almost entirely determined by United Kingdom contracts and the lifting of the embargo on the export of cattle to the United States strongly influenced the price of beef. The Commission found the primary live-stock industry and retail meat trade very competitive but three large firms control 60 p.c. of the total inspected slaughterings. The three largest packing firms made a net profit of \$4,300,000 in the four months following the removal of controls compared to less than \$1,000,000 in the corresponding period of 1947. Substantial profits were made on holdings in cold storage as a result of inventory appreciation when prices advanced with the changes in United Kingdom contract prices.

*Fruits and Vegetables.*—With the imposition of import restrictions in November, 1947, curtailed supplies and high consumer demand brought about a rise in prices. There was evidence that some wholesalers increased their gross margins to compensate for decreased volume of sales. These enhanced margins did not appear to the Commission to have been altogether necessary.

*Primary Textiles.*—Cotton fabric production, which in 1948 barely equalled the 1939 level, together with high consumer demand caused shortages. Primary cotton manufacturers attributed this to labour difficulties but the Commission thought that it may also have been "due to the fact that they operate with some degree of monopolistic advantage behind a heavy protective tariff".

The concentration of business in the primary wool industry is less than in primary cotton and there is less similarity in the fabrics produced. Operating income as a percentage of sales increased considerably for most firms between 1936-39 and 1947.

The synthetic fibre industry is conducted by three large firms, each occupying a monopoly in its own field. The returns of two of these firms were regarded by the Commission as "very high indeed".

*Secondary Textiles.*—The chief factors in the price rise in the clothing field were found to be increased cost of materials and labour, and the fixed percentage mark-up system.

*Chemical Fertilizers.*—"Prices of chemical fertilizers increased much less than the average of all price rises since the pre-war period." World prices are well above Canadian prices. Rises in domestic prices may be attributed to higher costs for imports and manufacturing. Generally speaking, individual producers have kept their prices at a reasonable level.

*Hides and Leather.*—Increases in prices of hides and leather are felt to have resulted from the influence of world market and United States prices, increases in wages and the increased costs of tanning materials. On the removal of controls, prices rose to meet United States prices and thereafter remained steady.

*Leather Footwear.*—"The rise in the price of shoes reflected the rise in the price of leather." Shoe retailers have a fixed mark-up of about 33 $\frac{1}{3}$  p.c. On the whole the manufacture of leather footwear was regarded by the Commission as very competitive.

*Lumber.*—The Commission found "little evidence to indicate widespread attempts . . . to raise or maintain prices by agreement . . . (or) of price leadership". Unprecedented demand and increased wages trebled the price of lumber in the years 1939-47. Canadian prices, though higher after decontrol, were still below the export price level. There was some evidence that "grading procedure, particularly in Eastern Canada, did not always seem to give sufficient protection to consumers" and a uniform system of grading was recommended.

**Consumer Credit.**—The increased demand for consumer credit was found to have been brought about by a desire for a higher standard of living, increased production, and an increase in the number and size of credit institutions. The Report states, however, that the consumer is seldom aware of what he actually pays for credit, rates quoted in many cases being discount rates on debts to be amortized by equal monthly payments. It was the opinion of the Commission that "if finance charges were stated as annual effective rates rather than as discount rates in loan contracts and literature, the consumer would be able to choose the credit most advantageous to him . . . . Lack of adequate and accurate statistics is one of the major obstacles to a knowledge of Consumer Credit" and it was recommended that the Dominion Bureau of Statistics "broaden and refine its statistics" relative to this indicator.

**Statistics.**—In addition the Commission recommended that the Dominion Bureau of Statistics explore the possibilities of improving the cost-of-living index. A continuing program of consumer expenditure surveys on a sample basis was suggested and, among other things, it was pointed out that "the present system of reckoning shelter costs gives an inadequate picture of true costs". Among other recommendations, a statistical study of productivity was urged and the publication of "an analysis of the way in which the consumer's dollar is divided among the various productive and distributive processes".

**Other Recommendations.**—It was recommended that the Dominion Companies' Act be revised to obtain "uniformity in the quality and quantity of information given in financial statements". More information on inventories, reserves and profits is required and the Federal Government was urged to obtain the co-operation of the Provincial Governments in developing uniform financial reporting under the Act.

Public accounts, the Commission thought, should be published so that the man in the street can understand the effect of government transactions.

The Combines Investigation Commission was urged to devise means to deal with the fixing of resale prices by manufacturers.

In conclusion, the Commission recorded its view that import controls should not be used as a protectionist device.

## Section 1.—Continuing Activities of the Wartime Prices and Trade Board, 1948-49\*

The activities of the Wartime Prices and Trade Board, up to the middle of 1948, in controlling prices and promoting an adequate supply and orderly distribution of essential goods and services, and later in the program of readjustment and decontrol, are described in previous editions of the Canada Year Book. Developments in the last six months of 1948 and in 1949 are presented here.

**Continuing and Reimposed Controls.**—At July 1, 1948, the only commodities remaining under wartime ceiling prices were sugar, edible molasses, primary iron and steel products, oils and fats including soap, lard and shortening.

Early in 1948, ceiling prices were reimposed on butter. Price or mark-up controls were applied during 1948 to a number of commodities, supplies of which were restricted by the Emergency Exchange Conservation Act, namely, canned fruits and vegetables, canned citrus juices, citrus fruits, cabbage, carrots and a number of imported fruits and vegetables. The only subsidies being paid as of July, 1948, were on oils and fats and on steel. On Aug. 1, 1948, the domestic price of wheat was advanced to \$2.00 per bushel in line with the United Kingdom contract price, and a subsidy of 46½ cents per bushel was authorized on western spring wheat going into domestic consumption in order to avoid any increase in the prices of flour and bread. Ceiling prices for flour and bread were reimposed on Aug. 19, 1948.

Butter production in 1948 was insufficient to meet domestic requirements and some controls on the interprovincial movement of butter and its restricted use had to be reimposed. In addition, the Government purchased 15,000,000 lb. of butter in Denmark, Australia and New Zealand. This butter was sold at ceiling prices and the difference between its cost and its selling price was absorbed by the Wartime Prices and Trade Board as a subsidy.

**Decontrol.**—On July 31, 1948, the subsidies paid on oils and fats were discontinued and oils, fats, soaps, shortening and lard were removed from price control. Offshore purchases of oils and fats and crushing stock continued to be allocated to primary users until February, 1949, when the decision of the International Emergency Food Committee to end international allocations made these unnecessary.

In March, 1949, the Minister of Finance in his Budget Speech announced further measures of decontrol. Price ceilings were revoked on flour, bread, butter, sugar, edible molasses, canned fruits and vegetables, and imported apples, celery, lettuce, onions, spinach and tomatoes. Concurrently the subsidy on wheat was removed. The Canadian Sugar Stabilization Corporation continued to be the sole importer of raw cane-sugar, since the wartime arrangements between Canada and the United Kingdom for the joint purchase of all Empire and Commonwealth raw sugars included the 1949 season's production.

The Continuation of Transitional Measures Act was extended by Parliament for another year to Mar. 31, 1950, with a proviso that limited the authority of the Wartime Prices and Trade Board to those goods and services subject to an order of the Board at the time of the amendment (Mar. 26, 1949).

The commodities under price control at that time were: citrus fruits, canned citrus fruit juices, cabbage, carrots, imported grapes and the primary forms of iron and steel. The order regarding cabbage was suspended Mar. 31, 1949. Subsidies paid

\* Prepared by the Wartime Prices and Trade Board.

on scrap as a raw material in steel making were terminated by Sept. 1, 1949, and subventions paid on directed movements were substantially reduced by that time. All remaining controls on the primary forms of iron and steel were removed on Dec. 1, 1949, and Feb. 15 1950. By the latter date the only remaining controls were those on rent.

**Rentals and Shelter.**—All controls on commercial accommodation were removed by Mar. 8, 1948, and no control has been reimposed either on this type of accommodation or on hotel rates, seasonal accommodation or boarding-house rates where meals are supplied.

Decentralization has proceeded in the fields of maximum rentals and eviction control. The provisions first enacted in 1947 permitting landlords to obtain a 10 p.c. increase in maximum rental upon offering the tenant a two-year lease were amended in October, 1948, to permit all landlords whose tenants occupied self-contained housing accommodation to obtain this 10 p.c. increase and a further 5 p.c. if they supplied heat to their tenants, without offering the tenant any security of tenure beyond that conferred by the regulations. At the same time, it was provided that leases of this type of accommodation to a person who was not the tenant on Nov. 1, 1948, were not subject to any control. On Dec. 15, 1948, the provision permitting application to increase a maximum rental which was lower than that prevailing generally for similar accommodation was extended to include in such privilege rooms which formed part of the residence of the landlord—a class designated as 'shared accommodation'.

In May, 1949, the maximum rentals of housing accommodation at Winnipeg, Man., and Victoria, B.C., were increased by special order to cover general increases in municipal taxes, rather than requiring each individual landlord to apply to the Board for the requisite increases. A similar order was applied to Toronto, Ont., in August, 1949. In the same month a new formula was evolved permitting rental appraisers, in increasing maximum rentals because of increase in municipal taxes, to compensate landlords for the portion of the tax increase which accrued between the beginning of the taxation year and the date upon which they could require the tenant to pay the increased rental.

Amendments were made to the provisions of the Board's orders granting to tenants security of tenure. In November, 1948, a landlord-owner was permitted to require that his tenant vacate on six months notice if the landlord needed the accommodation for his own residence, provided the landlord had owned the housing accommodation at Nov. 1, 1947. At the same time any landlord, no matter how long he had been the owner, who alleged that his inability to occupy his housing accommodation was causing him grievous hardship, was authorized to apply to a commissioner for exemption from security of tenure. In November, 1948, the same procedure of application to a commissioner for exemption from the provisions conferring security of tenure was extended to include any religious or educational institution or public hospital which required housing accommodation occupied by a tenant for the extension of its public service. In March, 1949, an owner of a house rented to a tenant who operated a rooming house therein and used no part for his own residence was granted the right of applying to a commissioner who could exempt from the security of tenure on assurance that the owner would leave the roomers undisturbed.

By orders of the Wartime Prices and Trade Board made Nov. 10, 1949, the maximum rental of rooms was increased 20 p.c. and the maximum rental of self-contained dwellings 18 p.c. if unheated by the landlord and 22 p.c. if heated by the

landlord. In the case of self-contained dwellings the increases were conditional upon the landlord offering to the tenant a term-certain lease of 12 months duration not to expire prior to Apr. 30, 1951. Any landlord who owned a self-contained dwelling prior to Nov. 1, 1949, could recover it from the tenant on six months notice if he needed the dwelling as his own residence, and any landlord of rooms could recover possession from the tenant upon six months notice without giving any reason for his action. A landlord and tenant of a self-contained dwelling could enter into a two-year term-certain lease, free of all control.

## Section 2.—Wholesale and Retail Prices

For purposes of statistical analysis, commodity prices are usually divided into two principal groups, wholesale prices and retail prices. The term 'wholesale' is not used literally, and primary producers', factory and jobbers' quotations, as well as actual wholesale prices, are often included in this group. Markets in which this type of price is quoted are usually well organized, and are frequently very sensitive and responsive to changing business and monetary conditions. Wholesale quotations are preferred, therefore, for sensitive index numbers of prices designed to reflect price reactions to economic factors.

Retail prices are important from a statistical point of view because they indicate changes in living costs and, along with measurements of income, show fluctuations in the economic well-being of the community. Retail prices, however, may be influenced by local conditions and are less sensitive than wholesale prices. There is ordinarily a lag of several months between retail and wholesale quotations.

### Subsection 1.—Wholesale Prices

**Historical Record of Prices.**—Wholesale price index numbers in Canada cover the period dating from Confederation in 1867. An intermittent decline characterized the first 30 years of this interval, followed by a gradual advance for a period of 16 years prior to the outbreak of war in 1914; from an average of 43·6 in 1897, the general wholesale index (1926=100) advanced without appreciable interruption to 64·4 in July, 1914. By the end of the War in November, 1918, this index had reached 132·8, and it continued upward to a post-war inflationary peak of 164·3 in May, 1920. The subsequent deflationary period lasted about two years, and between 1922 and 1929 price levels remained comparatively stable. Annual averages in this interval held between a high of 102·6 for 1925 and 95·6 for 1929. For the four years following 1929, depressionary influences were so severe that prices fell to the level of those of 1913. In February, 1933, the wholesale index touched an extreme low of 63·5 before turning upward again. Irregular recovery then continued until 1937, but the highest point reached, 87·6 in July, 1937, was substantially below the 1926 average. The collapse of the wheat market in 1938, along with fairly general depression in other markets, carried wholesale price levels just prior to the outbreak of war in 1939 down to about 11 points above the 1913 level. The August, 1939, index of 72·3 marked the extreme low of a two-year decline. The movement of prices prior to the outbreak of the Second World War was quite different, therefore, from that which preceded the First World War. The relatively low level of prices in August, 1939, probably influenced the sharper initial advance at the outbreak of war. However, during 1940, price levels steadied and showed no sign of a steep increase until 1941. By that time, great expansion in wartime production had made serious inroads into stocks of

nearly all basic commodities and, at the end of 1941, wheat remained the only important commodity for which stocks exceeded predictable requirements. The introduction of general price control in December, 1941, ended a year in which wholesale prices had advanced 11 p.c. as compared with about 3 p.c. in 1940. The effectiveness of control is indicated by the fact that percentage increases in wholesale prices amounted to only 3.7 and 5.7 for the years 1942 and 1943, respectively, while the December, 1944, index remained the same as the December, 1943, figure. The December, 1945, index of 103.9 was 11 p.c. above that for December, 1941, when price control became generally effective.

**Post-War Price Movements.**—The precipitous advance in United States general wholesale prices which began during the latter half of 1946 was of great concern to Canadian price-control authorities. This advance had been anticipated in July, 1946, when the Canadian dollar was returned to par with the United States dollar, thus reducing the Canadian dollar cost of imports from the United States. This provided a buffer of 10 p.c. only and the rise in United States prices was greater than that on a large majority of imported articles so that continuous pressure was felt, especially among individual items. The Canadian general wholesale price index rose from 103.6 to 112.0, an increase of over 8 p.c. in the 19 months between V-E Day in May, 1945, and December, 1946.

The Canadian price rise accelerated in 1947 as internal controls continued to be relaxed. The monthly general wholesale index advanced without interruption from 112.0 at December, 1946, to 143.5 at December, 1947, an increase of 28 p.c.

**Wholesale Prices, January, 1948-December, 1949.**—The price rise of 1947 carried through into 1948 although at a decreasing rate. During the 12 months from December, 1947, to December, 1948, the index rose 11 p.c. to reach 159.6. The sharp February, 1948, break in United States basic commodity markets was reflected in the Canadian wholesale index by a drop of only one-tenth of a point between February and March. The exceptionally sharp increase in the wholesale index between July and August reflected mainly the increase in the price of No. 1 Northern Manitoba wheat from \$1.58 to \$2.05 per bu. (basis, in store Fort William/Port Arthur or Vancouver).

The December wholesale index level of 159.6 marked a high, surpassed only by the inflationary peak of 1920. However, the months following December, 1948, were notably different from those following May, 1920. By January, 1921, the general wholesale index had dropped nearly 22 p.c. from the peak whereas, six months after December, 1948, the index had fallen only 2 p.c. The slight declines of January and February were largely the result of weaknesses in the prices of animal products, while the March-June decrease was almost entirely due to a sharp drop in prices of copper, lead and zinc. Little change occurred in the second half of 1949, the general wholesale index standing at 156.8 for December.

### 1.—Annual Index Numbers of Wholesale Price Groups, Significant Years, 1939-48, and Monthly Index Numbers, 1948 and 1949

(1926=100)

NOTE.—Figures for significant years 1913-39 will be found at p. 952 of the 1948-49 edition of the Year Book.

**Subsection 2.—Cost-of-Living Index**

**Purpose and Interpretation.**—The Dominion Bureau of Statistics cost-of-living index measures the influence of changes in retail prices of goods and services upon the cost of a representative urban wage-earner family budget.

It should be clearly understood that the index is a measurement of price change. Many people use the term 'living costs' to indicate the total cost of goods they buy. Used in this sense, living costs may include different things from year to year as well as different quantities of the same things. A cost-of-living index based upon this idea would reflect the value of total purchases made by everyone. It could be measured by the total consumer expenditure item as published in the Bureau's national income and expenditure estimates.\* The cost-of-living index is based upon a quite different idea. It measures changes in the cost of a family budget which includes the same amounts of the same commodities and services for considerable periods of time. It is essentially an index that measures changes in prices. Minor adjustments were necessary both during and after the War to take account of changing consumption patterns caused by imposition and removal of rationing, etc. At longer intervals a completely new survey of family budgets is undertaken. A survey of family income and expenditure was begun in October, 1948.

\* See National Accounts and Related Economic Statistics, Chapter X.

Each monthly figure is a percentage which compares the present dollar cost of the index budget with the cost of the same budget in a reference period. The Bureau's reference period now is the five-year interval 1935 to 1939, and the average cost of the index budget for this period is represented by 100. The comparable cost at Dec. 1, 1949, was 161.5 of its base-period cost. This figure of 161.5 becomes the cost-of-living index for Dec. 1, 1949.

**Cost-of-Living Index, January, 1948 - December, 1949.** — During 1948 retail prices of consumer goods and services continued to advance, and the official cost-of-living index rose 12.9 points or nearly 9 p.c. This substantial rise was considerably less than the 15 p.c. increase experienced during 1947. Actually, the index did not rise steadily for the full twelve months. The high for the year of 159.6 was reached in October and again in November. December saw a decline of 0.7 points, being the first decrease of any consequence since September, 1945.

### 3.—Annual Index Numbers of Living Costs, 1939-49, and Monthly Index Numbers, 1948 and 1949

(1935-39=100)

However, the index did not continue to decline and a levelling-off process became evident during the first five months of 1949. This was similar to the pattern of wholesale prices described previously and likewise differed significantly from the sharp drop in retail prices that followed immediately after the peak of 1920. During June, July and August, 1949, seasonal strength was responsible for a slight advance in the index level while the reverse was the case for the last four months of the year.

**Regional Changes in Living Costs.**—In 1941, the Bureau established cost-of-living indexes for eight regional cities covering the period since August, 1939. These indexes, for the cities shown in Table 4, are patterned after the official cost-of-living series for Canada and include group indexes for food, fuel, rent, clothing, home furnishings and services, and miscellaneous items. The budget quantities employed for these calculations have been computed for each city from expenditure records of wage-earner families in the year ended Sept. 30, 1938. For the city records, August, 1939=100 is the base used instead of the five-year period 1935-39.

Regional movements in living costs since the outbreak of the Second World War have been closely comparable to movements in the index for Canada as a whole, which advanced 60 p.c. between August, 1939, and December, 1949. During this period increases in the eight city indexes ranged from 54 to 64 p.c.

## 4.—Index Numbers of Living Costs in Eight Cities, Alternate Months, 1945-49

(August, 1939=100)

NOTE.—Figures on this base for years 1940-44 will be found in corresponding tables in previous Year Books beginning with the 1942 edition.

**World Cost-of-Living Indexes.**—In order to place changes in Canadian retail prices in perspective with those which have occurred in other countries, Table 5 gives cost-of-living indexes for selected countries and dates. It will be noted immediately that increases in the cost-of-living have been a world wide phenomenon and that the Canadian increase has been moderate compared to that which has occurred in many other countries. The indexes shown in Table 5 measure price change only and should not be used to compare living costs from country to country.

### Section 3.—Index Numbers of Security Prices

Security prices have long been utilized in statistical measurements related to economic phenomena. They are generally sensitive to changing business conditions, although this valuable characteristic is sometimes overshadowed by the fact that their movements may be influenced greatly by speculative interest very remotely associated with underlying economic conditions. Thus, in 1928 and 1929, common-stock prices advanced far beyond levels indicated by business profits and prospects. Security-price trends have also been at variance with other business indexes during the First and Second World Wars.

**Investors Price Index Numbers of Common Stocks, January, 1948–December, 1949.**—After an early decline during the first three months of 1948, common-stock prices advanced to a high in June. Despite the loss of part of the mid-year gains over the latter half of the year, prices closed firm in December, well up from the 1948 low point and considerably above the average for 1947.

During the first six months of 1949, a general weakness in common-stock prices brought the index to 99.6 for June, as compared to 115.8 for December, 1948. While widespread, the declines were most severe in machinery and equipment, pulp and paper, beverage, and transportation issues. The decline in the index coincided with weakness in security prices in the United States where a moderate business recession occurred during the first half of 1949. However, stock price trends were reversed during the second half of 1949 and by December, the Investors' Index had risen to 117.9 for a net gain of 2.1 points over the year.

**Preferred Stocks, January, 1948,-December, 1949.**—Although preferred stocks followed the same general pattern of fluctuations during the first half of 1948, as did common stocks, the subsequent decline from the June high wiped out most of the gains, so that the index closed about where it had stood in January. The 1948 behaviour constituted a continuation of the gradual decline in preferred stock prices begun in February, 1947. The downward movement continued into 1949, and by June the index had fallen to 136·3, the lowest point reached between that date and May, 1945. By December this index had risen to 150·7.

**Mining Stocks, January, 1948,-December, 1949.**—Although there was little net change in the total index during 1948, the two component series, gold and base metals, followed divergent trends. Gold stocks declined from 74·8 in December, 1947, to 60·3 in July, 1948, and ended the year at 63·0, a decline of 15·8 p.c. The base metals index advanced 17·1 p.c. from 108·5 in December, 1947, to 127·1 in December, 1948, in conjunction with advancing world prices for base metals.

During January-June, 1949, the indexes reversed their direction. Gold stocks strengthened somewhat while base metals dropped from 128·6 for January to 102·3 for June, as prices for copper, lead and zinc reversed sharply. Moving in line with other security prices these indexes rose moderately in the second half of 1949.

## Section 4.—Index Numbers of Bond Yields

The exceptional requirements of the war years of 1914-18 turned the federal authorities to the domestic market, a field that had hitherto served mainly the needs of the provinces and municipalities. Historical records of long-term bond yields in the domestic market prior to 1914 are obtainable, therefore, from provincial and municipal sources only. A record of Ontario issues from 1900 to date is available and was utilized for the first long-term bond-yield index constructed by the Dominion Bureau of Statistics. The relatively long period for which the record has been preserved makes this series of considerable value.

Since the First World War, however, the growing importance of federal financing in the domestic market has made it advisable to supplement the Ontario series with the federal index of long-term bond yields shown in Table 9. This series (1935-39=100) has been computed from January, 1937, on the basis of yields computed from a 15-year, 3 p.c. theoretical issue. Quotations for the theoretical yields are computed by the Bank of Canada.

**Bond Yields, January, 1948,-December, 1949.**—In January, 1948, standing Government support to the market for Government bonds was withdrawn, and the index of Dominion of Canada long-term bond yields rose from 84.8 at December, 1947, to 92.1 at January, 1948. Yields fluctuated narrowly during the following

34311—63½

18 months. Evidence of underlying strength for Government obligations continued to be felt as indicated by decreases in the yield index in the latter half of 1949.

## PART I.—FEDERAL, PROVINCIAL AND MUNICIPAL FINANCE

### Section 1.—Combined Statistics of Public Finance for all Governments\*

The purpose of this Section is to present combined statistics of public finance for all governments of Canada—federal, provincial and municipal. Information in greater detail is given in the Sections that follow.

**Combined Debt.**—The municipal debt figures for 1946 in Tables 1 and 2 include estimated figures for Quebec, as municipal statistics for 1946 for that Province are not available. It will be noted that the total combined direct debt for 1946 shows a reduction of over \$27,000,000 as compared with the previous year. This is due mainly to the fact that the Federal Government was able to avoid borrowing in 1946 to finance current operations and reduced its funded debt by \$127,000,000. Increases in total indirect debt, however, for both Federal and Provincial Governments resulted in a net general increase in the combined direct and indirect debt of approximately \$47,000,000.

**Combined Revenues and Expenditures.**—Tables 3 and 4 present over-all details of federal, provincial and municipal finance by combining ordinary and capital account revenues and expenditures for each level of government. Since all expenditure—ordinary or capital—is included, amounts provided for debt retirement have been excluded to avoid duplication. The revenues and expenditures presented in these tables are on a 'net' basis since the following revenues have been treated as offsets to their corresponding expenditures: shared-cost contributions of other governments, institutional revenue and certain other sales of commodities and services, and interest revenue exclusive of sinking-fund earnings. Certain

\* Revised in the Public Finance Division, Dominion Bureau of Statistics.

inter-governmental transfers such as the payments of the Federal Government to the provinces for the vacation of tax fields are neither conditional grants nor payments for services and cannot, therefore, be offset against any specific expenditure. These are set out separately in Tables 3 and 4 so as to show grand totals of revenue and expenditure for each level of government as well as totals excluding inter-governmental transfers.

Discrepancies between the amounts shown in Tables 3 and 4 as inter-governmental transfers are due to variations in the fiscal year ends and accounting practices of governments.

### 1.—Composition of Total Debt of all Governments, 1946, with Totals for 1945

## Section 2.—Federal Public Finance\*

A sketch of public finance, from the French regime to the outbreak of the First World War, appears at pp. 742-743 of the 1941 Year Book, while detailed sketches *re* tax changes from 1914 to 1938 will be found in issues of the Year Book beginning with the 1926 edition. An outline of the financing of Canada's war effort, including the more important changes in taxation during the war years from 1939 to 1945 is given at pp. 918-923 of the 1945 Year Book. Tax changes included in the 1945-46 and 1946-47 Budgets are given at pp. 883-884 of the 1946 edition, those in the 1947-48 Budget at pp. 952-953 of the 1947 edition, and those in the 1948-49 Budget at p. 964 of the 1948-49 edition.

**The 1949-50 Budget.**—The Budget for the fiscal year ending Mar. 31, 1950, was presented to Parliament on Mar. 22, 1949.† The forecast of revenue (after the tax changes outlined below) was \$2,477,500,000 and the forecast of expenditure was \$2,390,000,000. The estimated surplus was accordingly \$87,500,000. These forecasts compared with the 1948-49 actual revenues of \$2,771,395,075, expenditures of \$2,175,892,334, and surplus of \$595,502,741. The most significant feature of the Budget was the substantial abatement of personal income and excise taxes. The revenue loss from tax changes is shown in the following paragraphs.

The principal features of the tax changes were:—

**Personal Income Tax.**—Exemptions were raised for persons with single status from \$750 to \$1,000, for persons with married status from \$1,500 to \$2,000, for children eligible for family allowance from \$100 to \$150, for other dependants from \$300 to \$400. The rates of the graduated rate schedule were substantially lowered. These changes were expected to take approximately 750,000 former taxpayers off the tax rolls and assure that of the remaining taxpayers approximately 75 p.c. would pay tax at a rate of only 15 p.c. on taxable income.

**Corporation Income Tax.**—The rate of tax on the first \$10,000 of income was reduced from 30 p.c. to 10 p.c. and the rate on income over \$10,000 increased from 30 p.c. to 33 p.c. This change assured that small corporations would pay only 10 p.c. tax and that no corporation would pay more tax than under the previous rates unless its income exceeded approximately \$77,000. The carry-forward of losses was extended from three years to five years. The regulations on depreciation were changed to recognize obsolescence.

**Tax Credit for Dividends.**—Provision was made for the allowance of a credit of 10 p.c. of the amount of dividends received from common shares of Canadian taxpaying corporations against the personal income tax of a shareholder. This change was intended to remove substantially all the double taxation of corporation earnings for small corporations with income not exceeding \$10,000, and to make the combined incidence of corporation and individual income tax (taking account of the 10 p.c. credit) the same as previously for large corporations that distributed approximately one-half of their profits.

All of the above changes became effective on Jan. 1, 1949.

**Excise Taxes.**—The excise tax structure was greatly simplified by repealing some taxes on commodities and by imposing a straight *ad valorem* tax of 10 p.c. (at the manufacturer's level) on other commodities previously taxed at various rates.

\* Revised, except as otherwise indicated, under the direction of Dr. W. C. Clark, C.M.G., Deputy Minister, Department of Finance, Ottawa.

† Copies of the 1949-50 Budget may be obtained on application from the Department of Finance, Ottawa.

These excise tax changes in the 1949-50 Budget, and the yearly amount of revenue reduction involved, were as follows:—

(a) Excise taxes repealed on the following items:—

Soft drinks (previously 25 p.c. plus 1 cent per bottle).....	\$28,000,000
Candy (previously 30 p.c.).....	19,000,000
Chewing gum (previously 30 p.c.).....	2,000,000
Transportation tickets (previously 15 p.c.).....	20,500,000
Berths and parlour car seats (previously various rates).....	1,500,000
Long distance calls, extension telephones, telegrams and cables (previously various rates).....	7,500,000
Transportation buses (previously 5 p.c.).....	150,000
Carbonic acid gas (previously 50 cents per lb.).....	350,000
<b>TOTAL.....</b>	<b>\$79,000,000</b>

(b) Excise taxes reduced to 10 p.c. at manufacturers' level on the following items:—

Retail purchase tax on jewellery, etc. (previously 25 p.c. retail).....	\$ 8,000,000
Cosmetics and toilet preparations (previously 25 p.c.).....	4,000,000
Luggage, handbags, etc. (previously 35 p.c.).....	4,000,000
Matches (previously various rates).....	2,000,000
Smokers' supplies, pipes, ashtrays, etc. (previously 35 p.c.)...	600,000
Pens and pencils, desk sets, etc. (previously 35 p.c.).....	1,000,000
Cigarette lighters (previously 25 p.c.).....	250,000
<b>TOTAL.....</b>	<b>\$19,850,000</b>

(c) Tires and tubes (previously taxed at 5 cents per lb. converted to 10 p.c. *ad valorem* tax with no loss of revenue).

These changes became effective at midnight Mar. 22, 1949.

The following statement shows the net revenue loss from all tax changes:—

Item	Full Fiscal Year	Effect in Fiscal Year 1949-50
	\$	\$
Personal Income Tax—		
Increased exemptions and reduced rates..	-270,000,000	-235,000,000
Credit of 10 p.c. for dividends.....	-12,000,000	-9,000,000
Corporate Income Tax—		
Net increase in revenue from rate changes.	+12,000,000	+8,000,000
Excise taxes repealed.....	-79,000,000	-69,130,000
Excise taxes reduced to 10 p.c.....	-19,850,000	-17,370,000
NET REVENUE CHANGE.....	-368,850,000	-322,500,000

### Subsection 1.—Balance Sheets of the Federal Government

Table 7 gives the balance sheets of the Federal Government for 1945-49. The items on the assets side have been changed somewhat from the arrangement in former years but the revisions have been carried back to 1945, so that all years shown in the table are comparable. Figures in earlier Year Books are not on a basis comparable to those in the present Table 7. On the asset side, accounts classified as *active* assets are shown; these represent cash or investments that are interest-producing or have a readily realizable cash value. On the liability side, such liabilities as have been ascertained and brought into the accounts are given. No liability is shown for interest accrued but not due, nor for current obligations incurred for supplies or services but not paid for at the end of the fiscal year. Indirect liabilities under guarantees are not reflected in the Balance Sheets, but are set out in a special schedule. (See p. 1028.)

The excess of liabilities over active assets, designated the *net debt*, is analysed in a statement appended to the Balance Sheet, and is apportioned to non-active assets, which include capital expenditures and non-productive investments, and to accumulated deficits in Consolidated Deficit Account.

<sup>1</sup> Direct liabilities only. Indirect liabilities or guarantees given by the Government of Canada are dealt with in Table 27, p. 1028.

<sup>2</sup> In the *Public Accounts* no charge was made against this item.

## Subsection 2.—Revenues and Expenditures

In the fiscal year ended Mar. 31, 1949, revenues declined by \$100,351,035 from the previous year while expenditures fell by \$19,734,120. The surplus of revenues over expenditures for the fiscal year amounted to \$595,502,741. Total revenues aggregated \$2,771,395,075 compared with \$2,871,746,110 in 1947-48. Tax revenues were \$15,933,119 less than for the previous year but non-tax revenues increased by \$35,176,961. Special receipts and other credits declined by \$119,594,877 due largely to smaller receipts from sales of surplus war assets.

Total expenditures were \$2,175,892,334 in 1948-49 compared with \$2,195,626,454 in the previous year. Demobilization and reconversion expenditures continued to decrease, \$425,573,782 being disbursed for this purpose compared with \$634,421,026 in 1947-48. Ordinary expenditures increased to \$1,573,449,934 in 1948-49 and accounted for 72 p.c. of total expenditures during the year.

Capital expenditures totalling \$18,473,566 in 1948-49 were higher than in the previous year while special expenditures totalling \$34,813,506 showed a sharp decrease from 1947-48.

The increase in the Canadian National Railways deficit was chiefly responsible for the increase in expenditure on account of Government-owned enterprises which totalled \$39,662,806 in 1948-49 compared with \$18,695,247 in 1947-48.

## 8.—Details of Revenues, Years Ended Mar. 31, 1944-49

Revenues	1944	1945	1946	1947	1948	1949

<sup>1</sup> Includes a write-down of assets amounting to \$62,938,239.<sup>2</sup> Reserve against estimated losses

on wheat marketing guarantees applicable to the fiscal year 1938-39.

<sup>3</sup> Reserve against estimated

losses on wheat marketing guarantees applicable to the fiscal year 1939-40 to the extent of \$27,000,000.

<sup>4</sup> Includes \$25,000,000 as reserve against possible losses on assets.<sup>5</sup> Includes \$13,963,218 subsidy

payments on oats and barley used as feed for live stock.

<sup>6</sup> Includes \$75,000,000 as reserve for possible

losses on assets.

<sup>7</sup> Includes Fraser Valley, B.C., Emergency Relief and Rehabilitation.

**13.—Per Capita Revenues and Expenditures, Years Ended Mar. 31, 1930-49**

NOTE.—The years marked with an asterisk (\*) are Census years; per capita figures for intercensal years are based on estimated populations, see p. 155. See Tables 8 and 9 for the figures of revenues and expenditures on which this table is based. Figures for the years 1868-1912, inclusive, will be found at p. 849 of the 1938 Year Book; those for 1913-29 at p. 932 of the 1945 edition.

War Project and other special activities of the National Research Council.

<sup>7</sup> See under "Pensions

war and military"; Veterans Affairs not organized in 1944.

<sup>8</sup> Includes items not specified.

### Subsection 3.—Analysis of Revenues from Taxation

Table 15 gives total expenditures that have been met by taxation and from all sources of revenue for each of the fiscal years ended Mar. 31, since 1936. In the three years prior to the Second World War the record showed an increasing proportion of expenditures being met by revenue and in 1938, more than 96 p.c. of all expenditures was met from all revenue and almost 84 p.c. from taxation revenue. During the war years expenditures far exceeded revenues but in 1947 taxation met over 92 p.c. of expenditures and revenue from all sources exceeded expenditures. For 1948 and 1949 revenues from taxation alone exceeded total expenditures by a substantial amount due to the maintenance of high taxation levels and a greatly increased national income. This accounts for the situation shown by the figures of Table 15 where percentages of total expenditures provided from taxation and from all revenues are given for 1949 as 111·96 and 127·37, respectively.

**15.—Relationship of Total Expenditures to Taxation Revenue and to Total Revenue,  
Years Ended Mar. 31, 1936-49**

Year	Total Expenditures	Taxation Revenue	Total Revenue	Percentages of Total Expenditures Provided from—	
				Taxation	All Revenue

<sup>1</sup> See text at foot of p. 1014 for explanation.

The revenues from customs and excise duties, the two most important sources prior to the First World War, amounted in 1949 to less than 18 p.c. of the revenue derived from taxation and revenue from income tax formed 53 p.c. of the tax revenue.

The following analyses of taxation revenues are confined to excise duties, excise taxes and income tax revenue; customs receipts constitute a single item in the "Public Accounts" and cannot be further analysed here.

### Excise Duties\*

Excise duties proper are presented here together with a summary of the excise tariff and statistics arising as a by-product of administration, such as the quantities of grain and other products used in distillation and the quantities of excisable goods taken out of bond.

**Canadian Excise Tariff.**—The following is a statement of the Canadian excise tariff, as at Dec. 31, 1949:—

1. Spirits distilled in Canada, per proof gal. . . \$11.00  
    Canadian brandy, per proof gal. . . . . \$ 9.00  
    Except spirits as follows:—  
       (a) used in a bonded manufactory for medicines, extracts, etc., per proof gal. . . . . \$ 1.50  
       (b) used in a bonded manufactory for perfumes, per proof gal. . . . . \$ 1.50  
       (c) used for chemical compositions approved by Governor in Council, per proof gal. . . . . \$ 0.15  
       (d) sold to licensed druggists for pharmaceutical preparations, per proof gal. . . . . \$ 1.50  
       (e) distilled from native fruits and used by a licensed wine manufacturer for fortification of native wines, per proof gal. . . . . \$ 1.50
2. Spirits imported (in addition to any of the duties otherwise imposed), per proof gal. . . . . \$ 0.30
3. Beer or Malt Liquor:—  
    Brewed in whole or part from any substance other than malt, per gal. . . . . \$ 0.45
4. Malt:—  
    (a) produced in Canada and screened, per lb. . . . . \$ 0.16  
    (b) imported, per lb. . . . . \$ 0.16
5. Tobacco, Cigars and Cigarettes:—  
    (a) manufactured tobacco, per lb. . . . . \$ 0.35  
    (b) cigarettes weighing not more than 2½ lb. per M, per M. . . . . \$ 6.00  
    (c) cigarettes, weighing more than 2½ lb. per M, per M. . . . . \$11.00  
    (d) Canadian raw leaf tobacco, when sold for consumption, per lb. . . . . \$ 0.20  
    (e) cigars, per M. . . . . \$ 1.00

\* Revised by the Customs and Excise Division, Department of National Revenue, Ottawa.

A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities to universities, scientific or research laboratories, or to any bona fide public hospital for medicinal purposes only.

**Revenues from Excise Duties.**—In the year ended Mar. 31, 1949, tobacco, including cigarettes, supplied about 49 p.c. of the revenue from excise duties.

<sup>1</sup> Classification of this figure not available.

The quantity of spirits manufactured has fluctuated greatly since 1920, varying from the low of 2,356,329 proof gal. in that year to the high of 35,555,059 proof gal. recorded in 1945.

**Alcohol and Tobacco Taken Out of Bond.**—For the amounts of spirits, malt liquor, malt and cigarettes taken out of bond for consumption in 1949, see Table 15, p. 856, Chapter XXI.

## Excise Taxes

The statistics given in Table 18 represent gross collections by the Excise Division of the Department of National Revenue; they differ from the figures shown in Table 10 (in the column "Sales and Other Excise Taxes"), which represent net revenues received, by the amounts of the refunds shown in footnote 1 to Table 18.

<sup>1</sup> Includes refunds and drawbacks of \$17,549,001 in 1943, \$34,342,147 in 1944, \$194,718,627 in 1945, \$114,005,355 in 1946, \$29,845,228 in 1947, \$10,683,238 in 1948 and \$12,871,403 in 1949.

### Income Tax

The income tax revenue shown in Table 19 represents collections made by the Taxation Division of the Department of National Revenue under the authority of the Income War Tax Act (c. 97, R.S.C. 1927) as amended and the Income Tax Act (11-12 Geo. VI, c. 52).<sup>\*</sup> The Acts cover more than income tax proper, as corporation taxes are coming to be regarded in a different light from those on the income of individuals. Income tax on individuals and on corporations is treated separately in Part II of this Chapter, at pp. 1044-1048.

Details of income tax changes in the Budgets of 1945-46, 1946-47 and 1947-48 are given at pp. 1008-1009 of the 1948-49 Year Book.

In the 1948-49 Budget there were only minor changes in the individual and corporation tax provisions and no changes in basic rates. However, the exemption for Federal succession duties was raised from \$5,000 to \$50,000.

The tax on dividends and interest (Sect. 9B of the Act) is levied at the rate of 5 p.c. on interest paid by Canadian debtors (except provinces and municipal or public bodies) in a currency which is at a premium in excess of 5 p.c. over Canadian funds, and at the rate of 15 p.c. on dividends received by persons who are non-residents of Canada, and on interest received from or credited by Canadian debtors to non-residents, except in the case of Government of Canada or Government of Canada guaranteed bonds, and also on interest received by a non-resident parent company from a Canadian subsidiary, except where an agreement had been entered into prior to Apr. 1, 1933, for the payment of such interest in a currency other than Canadian. The tax also includes fees for copyrights and rights for the use of films, phonograph records and similar devices. The tax on rents and royalties (Sect. 27) is imposed at the rate of 15 p.c. on non-residents in respect of the gross amount of all rents, royalties, etc., for the use in Canada of real or personal property, patents or for anything used or sold in Canada. The gift tax (Sect. 88) is imposed at the rate of 10 p.c. on gifts up to \$5,000 and at rates varying from 11 p.c. to 28 p.c. on gifts from \$5,000 to \$1,000,000 or over. Section references in this paragraph and in Table 19 relate to the Income War Tax Act.

The Budget for the fiscal year ending Mar. 31, 1950, was presented to Parliament on Mar. 22, 1949. Parliament was dissolved before the provisions of the Budget were passed and it was reintroduced to the new Parliament with minor modifications on Oct. 20, 1949. The most significant feature of this Budget was the substantial abatement of personal income and excise taxes.

In the personal income-tax field exemptions were raised for persons with single status from \$750 to \$1,000, for persons with married status from \$1,500 to \$2,000, for children eligible for family allowance from \$100 to \$150, for other dependants from \$300 to \$400. The rates of the graduated rate schedule were substantially lowered.

Provision was made also for the allowance of a credit of 10 p.c. of the amount of dividends received from shares of Canadian taxpaying corporations against the personal income tax of a shareholder.

In the corporation income-tax field the rate of tax on the first \$10,000 of income was reduced from 30 p.c. to 10 p.c. Taken in conjunction with the 10 p.c. tax

<sup>\*</sup> The Income Tax Act which was assented to June 30, 1948 superseded the Income War Tax Act.

credit noted above, this change removed substantially all the double taxation of those corporations whose earnings were not in excess of \$10,000. The rate of tax on corporation income over \$10,000 was raised to 33 p.c. The carry-forward of losses was extended from three years to five years. The regulations on depreciation were changed to recognize obsolescence.

### 19.—Collections under the Income War Tax Act, Years Ended Mar. 31, 1935-49

(Tax and Applicable Section of the Act)

NOTE.—Figures for the years 1919-34 will be found at p. 966 of the 1947 Year Book.

<sup>1</sup> These figures include the estimated refundable portion and therefore do not agree with the totals given in Table 10.

<sup>2</sup> Includes national defence tax amounting to \$27,672,018.

<sup>3</sup> Includes national

defence tax amounting to \$106,636,747.

<sup>4</sup> Includes 1942 deferred tax amounting to \$2,317,733.

<sup>5</sup> Includes 1942 deferred tax amounting to \$3,326,161.

<sup>6</sup> Includes 1942 deferred tax amounting to

\$1,308,982.

<sup>7</sup> Includes 1942 deferred tax amounting to \$1,002,027 and tax on private companies

amounting to \$41,972,700.

<sup>8</sup> Includes 1942 deferred tax amounting to \$685,967 and tax on private

companies amounting to \$12,596,108.

<sup>9</sup> Includes 1942 deferred tax amounting to \$778,617 and tax on

private companies amounting to \$3,440,514.

### Subsection 4.—Subsidies and Loans to Provinces

**Subsidies.**—By the provisions of the British North America Act and subsequent arrangements entered into from time to time, the Federal Government makes certain annual payments to the provinces: these are summarized as follows:—

**Interest on Debt Allowances.**—By the terms of the union of the provinces at Confederation in 1867, the Federal Government assumed all the outstanding debts and liabilities of the provinces and undertook to pay, except in the case of Ontario and Quebec, interest at 5 p.c. on the amounts by which the actual per capita indebtedness of the provinces fell short of a basic debt allowance calculated at approximately \$25 per capita. On the subsequent entry of additional provinces into Confederation, similar arrangements were effected regarding the assumption of their pre-Confederation indebtedness. From time to time, adjustments have been made in the basis of calculating the debt allowances of provinces; moreover, the Federal Government pays interest at 5 p.c. per annum on the amounts by which the actual debts of the provinces, on their entry into Confederation, fell short of the allowed debts as adjusted. The aggregate annual payment by the Federal Government to the provinces in respect of interest on debt allowances is \$1,609,386.

*Allowances for Governments and Legislatures.*—Under the terms of the union, annual specific grants were made to the various provinces for the support of their governments and legislatures. These amounts vary with the population of the provinces, according to the following scale approved in 1907:—

Where population is—				\$
Under 150,000.....				100,000
150,000, but does not exceed 200,000.....				150,000
200,000, " " 400,000.....				180,000
400,000, " " 800,000.....				190,000
800,000, " " 1,500,000.....				220,000
Over 1,500,000.....				240,000

Aggregate annual allowances presently paid under this head amount to \$1,810,000.

*Allowances per Head of Population.*—Under the British North America Act of 1867, a grant of 80 cents per head of population was allowed to each province. The British North America Act of 1907 provided that the grant would be paid to each province at the rate of 80 cents per head up to a population of 2,500,000, and at the rate of 60 cents per head for so much of the population as exceeded that number. Such allowances paid to the provinces in the year ended Mar. 31, 1949, amounted to \$8,731,917.

*Special Grants.*—In the case of certain of the provinces, grants have been added to the original scale of subsidies in view of special circumstances obtaining, which, for the year ended Mar. 31, 1949, amounted in the aggregate to \$2,468,380 as set forth below:—

*Prince Edward Island.*—A special grant of \$195,000 less a deduction of \$39,120 (net grant of \$155,880).

*New Brunswick.*—An annual grant of \$150,000 since 1875 in consideration of the repeal of lumber duties reserved to the Province by the B.N.A. Act of 1867.

*Manitoba.*—A special grant on the basis of population amounting at present to \$562,500 per annum.

*Saskatchewan and Alberta.*—An annual sum as compensation for loss of public lands revenue, based on their respective populations and amounting at present to \$750,000 for Saskatchewan and \$750,000 for Alberta.

*British Columbia.*—A special grant amounting at present to \$100,000 per annum.

<sup>1</sup> See text at p. 1020.<sup>2</sup> Allowances in lieu of debt.<sup>3</sup> Includes "Additional Special Grants" (see text following) since 1946.

*Additional Special Grants.*—Additional special grants were voted annually to the Maritime Provinces, Manitoba, Saskatchewan and British Columbia up to 1941.

These additional special grants were suspended with the coming into force of the Dominion-Provincial Taxation Agreements. They were paid in 1947 and later years in the case of the three Maritime Provinces under the provisions of the Maritime Additional Subsidies Act, 1942.

*Dominion-Provincial Taxation Agreements.*—The Dominion-Provincial Tax Rental Agreements Act, 1947, authorized the Federal Government to enter into Agreements with the provinces by which, in return for compensation, the Provincial Governments would agree to refrain from levying certain direct taxes for a period of five years. These Agreements are successors to the Wartime Agreements which have lapsed (see pp. 900-901 of the 1946 Year Book). By the end of 1949, seven provinces—Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, Alberta, and British Columbia—had made new Agreements with the Federal Government and negotiations were taking place with Newfoundland. Yukon Territory made an Agreement similar to those made by the provinces.

The main purposes of these Agreements are to establish a more equitable system of taxation throughout Canada by reducing duplication of direct taxation and duplication of machinery for the collection of direct taxes, to give a greater measure of stability to the revenues of the provinces, and to enable the Federal Government, along with the Provincial Governments, to carry out national policies intended to maintain high levels of employment and production.

The Agreements continue the basic provisions of the Wartime Taxation Agreements, under which the provinces and their municipalities withdrew their income taxes, corporation income taxes and corporation taxes in return for compensation from the Federal Government (pp. 900-901 of the 1946 Year Book). There are, however, some additional provisions in the new Agreements which have resulted from the negotiations carried on between the governments in 1945 and 1946 at the Dominion-Provincial Conference meetings and since the Budget offer of June, 1946. The main features of this offer which have been embodied in the Agreements are outlined at pp. 883-884 of the 1946 Year Book.

The provinces are required, under the Agreements, to refrain from levying certain direct taxes, with the exception that they are permitted to impose a corporation income tax of 5 p.c. on the income of corporations attributable to their operations in the particular province. The revenue from this tax is to go to the individual province with a corresponding reduction in the amount of compensation paid to that province. The purpose of this provision is to assure as nearly as possible a uniform level of corporation income tax throughout Canada as between the agreeing and non-agreeing provinces. Under the Agreements it is provided, however, that a deduction will be made from the payment to the province corresponding to the amount of revenue that such a tax would have yielded even if the province does not impose the tax. The Agreements contain a set of rules by which the income of corporations is allocated to the various provinces in which they carry on business and further provide that this tax must be imposed under the same general provisions as are in the Income War Tax Act and the Income Tax Act, and that it will be administered on behalf of the provinces by the Federal Government and at the expense of the Federal Government.

Another provision concerns succession duties, a field not included in the War-time Taxation Agreements. The provinces are now given the alternative of withdrawing from this field or remaining in it. If they withdraw, they receive the full amount of compensation otherwise payable under the Agreements (in the determination of which succession duties revenue was taken into account) but, if they remain, their payment is reduced by the amount of revenue loss which the Federal Government suffers, through the credit allowed against the Federal Government duty for provincial duties on the same succession. All seven of the provinces which have negotiated Agreements with the Federal Government have taken the first alternative and withdrawn from the succession duties field.\*

The Agreements do not prevent the imposition of royalties and rentals on natural resources by a province since such royalties and rentals are not regarded as taxes when they are of a nature conforming with the definitions set forth in the Agreements. The imposition of taxes on income derived from logging and mining operations, as defined in the Agreements, is allowed without any deduction from the payment to the province.

The significant differences between the 1946 Budget offer and the present Agreements are as follows:—

- (1) the provinces may choose between two methods of determining the amount of their guaranteed minimum annual payments (see p. 1023);
- (2) the total guaranteed minimum annual payments to the provinces under these new methods are increased by \$25,100,000 to \$206,500,000;
- (3) these new guaranteed minimum annual payments are used as the bases for calculating the annual payments which are adjusted for increases in provincial population and gross national production per capita;
- (4) in the year following the termination of the Agreements, provincial taxpayers are to be allowed by the Federal Government tax credits of a maximum of 5 p.c. of the federal income tax, 50 p.c. of federal succession duties, and one-seventh of federal corporation income tax for taxes imposed by their Provincial Governments.

The guaranteed minimum annual payments are now computed in one of two ways. Under the first option a province may elect as a base \$12.75 per capita of its 1942 population, plus 50 p.c. of its income tax and corporation tax revenue in 1940, plus statutory subsidies payable in 1947; under the second it may choose \$15 per capita of its 1942 population plus statutory subsidies payable in 1947.

\* See Succession Duties, pp. 1048-1054.

A special arrangement was made for Prince Edward Island which is to receive a guaranteed minimum payment of \$2,100,000. This is slightly in excess of the amount determined by either of the two formulas. The guaranteed minimum annual payments to the provinces under the most favourable option and the estimated 1948 payments are shown in Table 22. The guaranteed minimum annual payment to the Yukon is \$89,365 and the estimated 1949 payment is \$148,630.

The actual amount payable in any one year is calculated according to the following method. The minimum payment is adjusted for changes in provincial population and gross national product per capita, as compared with the base year 1942, for each of the three calendar years immediately preceding the fiscal year of payment. These three amounts are then averaged, and the resultant is the amount payable. If, in any of the three calendar years concerned, the amount calculated is less than the amount of the minimum payment, then the amount of the minimum payment is substituted. This method of computing the annual payments ensures that the revenues of the province will increase as the provincial population and gross national product per capita increase, and at the same time guarantees that the province will, at no time in the period covered by the Agreement, receive less than the stated minimum.

**22.—Guaranteed Minimum Annual Payments to Provinces<sup>1</sup> under Most Favourable Option and 1949 Payments**

Province and Option	Guaranteed Minimum Annual Payments <sup>2</sup>	1949 Payments <sup>2</sup>
	\$'000	\$'000
Prince Edward Island.....	2,100	2,620
Nova Scotia (Second).....	10,870	13,754
New Brunswick (First).....	8,773	11,161
Manitoba (First).....	13,540	16,556
Saskatchewan (Second).....	15,291	17,517
Alberta (First).....	14,228	17,657
British Columbia (First).....	18,120	26,125
<b>Totals.....</b>	<b>82,922</b>	<b>105,390</b>

<sup>1</sup> The Governments of Quebec and Ontario have not made agreements with the Federal Government. The payments for these Provinces (First Option) would be: Quebec, \$56,382,000 and \$71,282,000; Ontario, \$67,158,000 and \$84,001,000.

<sup>2</sup> Subject to deduction of statutory subsidies. See Table 20, p. 1020.

Under an offer ancillary to the Agreements, but which applies to all provinces, whether agreeing or not, the Federal Government will pay to the province one-half of the federal corporation income tax on income of corporations derived from generating and/or distributing to the public, electric energy, gas or steam where this is the main business of the corporation.

**Subsection 5.—National Debt**

The gross national debt of Canada on Mar. 31, 1914, was \$544,391,369 as against assets of \$208,394,519, leaving a net debt of \$335,996,850. This was a comparatively small debt; it was incurred almost altogether for public works of general utility which, like the Intercolonial and transcontinental railways and the canal system, remained assets, though perhaps not realizable assets, of the nation, or was expanded by the subsidizing of enterprises which, like the Canadian Pacific Railway, though not government-owned, assisted greatly in extending the area of

settlement as well as the productive and, therefore, the taxable capacity of the country. Broadly speaking, the debt was incurred for productive purposes. Also, it was mainly held outside the country, the principal of the Federal Government funded debt payable at London, England, being \$302,842,485 on Mar. 31, 1914, as against only \$717,453 payable in Canada.

From 1914 to 1920, the gross debt increased by almost \$2,500,000,000 to a total of \$3,042,000,000 due to heavy war and post-war expenditures and, while there was a slight reduction to a low point of \$2,544,586,411 at Mar. 31, 1930, additional expenditures during the depression years resulted in a gross debt of \$3,710,610,593 by Mar. 31, 1939.

From 1939 to 1946 there was an increase of \$15,249,235,590, incurred mainly for war purposes, bringing the total gross debt to \$18,959,846,183 at the end of March, 1946. After deduction of active assets held by the Government, the net debt showed an increase of \$10,268,846,135 during this period, amounting to \$13,421,405,449 at the end of March, 1946. At the end of March, 1949, total gross debt had been reduced to \$16,950,403,795 and net debt to \$11,776,134,152.

The portion of the funded debt payable in foreign currencies decreased steadily and sharply during the war years, as was inevitable under conditions where almost the entire amount of Canada's war financing was carried out through domestic operations. Of the total funded debt and treasury bills outstanding as at Mar. 31, 1949, amounting to \$15,585,036,580, less than 2 p.c. was payable outside Canada: \$9,256,258 payable at London and \$298,000,000 at New York.

### 23.—Summary of the Public Debt of Canada and Interest Payments thereon, Years Ended Mar. 31, 1935-49

NOTE.—Statistics for the years 1867-99 are given at pp. 775-776 of the 1942 Year Book; those for 1900-13, at p. 944 of the 1945 edition; and those for 1914-34 at p. 972 of the 1947 edition.

Year	Gross Debt	Active Assets	Net Debt	Net Debt Per Capita <sup>1</sup>	Increase or Decrease of Net Debt During Year	Interest Paid on Debt	Interest Received from Active Assets	Interest Paid Per Capita <sup>1</sup>

<sup>1</sup> Based on the official estimates of population given at p. 155.

<sup>2</sup> This amount represents return on investments, which includes interest on investments, profits of Bank of Canada and Central Mortgage Bank and other items.

<sup>3</sup> The apparent increase in interest paid is due to the accrued interest on refundable taxes having been charged in the year of repayment.

**Interest-Bearing Debt.**—The interest-bearing debt of Canada has shown a sharp increase since 1939, amounting to \$16,363,000,000 at Mar. 31, 1949, as compared with \$3,658,000,000 at the same date in 1939. The average rate of interest on this debt continued downward during the war years, reaching the low point of 2.547 p.c. at Mar. 31, 1945. Slight increases in 1946, 1947 and 1948 were recorded, and the rate stood at 2.710 p.c. at Mar. 31, 1948, but decreased slightly to 2.701 at Mar. 31, 1949. This is in contrast with the experience of the First World War, when the average interest rate on the direct debt of the nation rose from 3.368 p.c. at Mar. 31, 1913, to a high point of 5.164 p.c. at Mar. 31, 1922.

During the fiscal year ended Mar. 31, 1939, interest on the public debt absorbed about 26 p.c. of total Government receipts. Interest on the debt in late years has absorbed a smaller portion of revenues, amounting to less than 17 p.c. in the year ended Mar. 31, 1949.

**24.—Interest-Bearing Debt, Annual Interest Charges thereon and Average Rates of Interest, as at Mar. 31, 1935-49**

NOTE.—Statistics for the years 1913-34 are given at p. 977 of the 1947 Year Book.

<sup>2</sup> Includes refundable

**Funded Debt Operations.**—Conversions and other national debt operations carried out between 1914 and 1930 are dealt with at pp. 842-843 of the 1933 Year Book; those between 1931 and 1934 at pp. 905-907 of the 1934-35 Year Book; those of the fiscal years 1935 to 1946 in the respective Year Books for those years and those for 1947 and 1948 at p. 988 of the 1948-49 edition.

**Treasury Bills.**—Since 1934 a market for short-term treasury bills that has proven highly satisfactory has been built up in Canada. Each issue, with two exceptions (where the bills were sold direct to the Bank of Canada), has been offered for public tender. Lists of treasury bills sold by public tender for the fiscal years ended 1934-46 appear in the respective Year Books beginning with the 1937 edition. Details of the issues in continuation of the list published at p. 778 of the 1942 Year Book may be obtained on request.

## 25.—Funded Debt and Treasury Bills of Canada, as at Mar. 31, 1949

NOTE.—Certain qualifications as to redemption prior to maturity govern most of these issues; they are explained fully in the "Public Accounts".

<sup>1</sup> In addition to the interest charge, the loan from the Export-Import Bank carries a commitment charge of 0.5 p.c. on the unutilized portion. <sup>2</sup> Payable in United States dollars.

**Guaranteed Debt.**—Besides the direct debt of the Federal Government, already dealt with, there are also large indirect obligations, arising mainly out of the guarantee of securities, by the Federal Government, of the railway lines that now form the Canadian National Railways, and the subsequent extensions thereof. Together with these are other small indirect obligations, originating in the Government's guarantees of the bonds of the Canadian National Steamship services and of the bonds of the Harbour Commissions, issued in the main for harbour improvements. Since 1932, guarantees of certain bank loans have been made under the various Relief Acts. With the commencement of business of the Bank of Canada on Mar. 11, 1935, the guarantee [authorized by Sect. 27 (6) of the Bank of Canada Act] of the deposit required to be maintained in the Bank of Canada by every chartered bank came into force. This guarantee must be implemented "in the event of the property and assets of the Bank being insufficient to pay its liabilities, and if the Bank suspends payment of any of its liabilities".

For full details of other guarantees also outstanding at Mar. 31, 1949, see Schedule "V" to the "Public Accounts" for 1949.

### 27.—Guaranteed Debt of the Federal Government (Amounts Held by the Public), as at Mar. 31, 1935-49

NOTE.—Figures for the years 1914-23 are given at p. 837 of the 1943-44 Year Book; those for the years 1924-34 at p. 978 of the 1947 Year Book.

<sup>1</sup> The main item in this category is the guarantee of bank advances to the Canadian Wheat Board; does not include indeterminate amounts and amounts not yet determined.

## Section 3.—Provincial Public Finance\*

Revenues and expenditures presented in this Section do not agree with those shown on Tables 3 and 4 of this Chapter because of differences in the methods used to compute 'net' figures.

Commencing with 1946 the statistics appearing in this section have been prepared on a new basis not strictly comparable with those given for previous years. The classifications of revenues and expenditures are presented in more detail than heretofore and certain of the former major classifications have been eliminated or redistributed. In the case of those tables dealing with debt the totals are comparable with previous years but the classification has been revised. Data on the revised basis are available at present only for the year 1946 but it is anticipated that comparable statistics for later years will be complete before the publication of the 1951 Year Book.

In order to prepare comparable statistics it is essential that data be presented, to the greatest possible extent, in terms of uniform categories. In many instances, activities pertinent to a specific function are excluded by some Provincial Governments from their ordinary account whereas similar activities are included by other provinces. The special or administrative funds of this nature so excluded are therefore added to provincial ordinary account to arrive at 'general' revenues and

\* Revised in the Public Finance Division, Dominion Bureau of Statistics. Years referred to throughout this Section are fiscal years ended nearest Dec. 31 of year stated.

expenditures. For this reason it is obvious that total revenues and expenditures presented herein will differ considerably from those shown in provincial public accounts.

Fiscal periods dealt with are as nearly coincident as is possible in view of the variations in provincial fiscal year-ends. For example, in 1946 fiscal year-ends were as follows: Nova Scotia, Nov. 30, 1946; New Brunswick, Oct. 31, 1946; and all other provinces, Mar. 31, 1947. It should be noted also that the figures for Manitoba and Saskatchewan in 1946 cover a fiscal period of only eleven months. Both these provinces changed their fiscal year-ends from Apr. 30 to Mar. 31.

### Subsection 1.—Revenues and Expenditures of Provincial Governments

Tables 28, 29 and 30 present a general summary of provincial government finance by combining ordinary and capital account revenues and expenditures on a net basis. These tables provide a more valid comparison than those based on ordinary account alone because they eliminate incomparabilities that arise through variations between provinces and between years in the types of expenditure made from capital account. In Table 28, 'Net General Revenues and Net Combined General and Capital Expenditures', subject to changes in procedure which follow, has the same meaning as the heading which appeared over this table in the 1948-49 Year Book. 'Net General Revenues' is arrived at by deducting from 'Gross General Revenues' in Table 31: (a) all institutional revenues, (b) interest, premium, discount and exchange and, (c) grants-in-aid and shared-cost contributions received from other governments. While the surplus position is the same in both the gross and net presentation, the former tends to emphasize the gross administrative burden of services and the latter shows the net cost of these services. When calculating 'Net Combined General and Capital Expenditures', amounts similar to the deductions from revenue described above are deducted from the pertinent function of expenditure, and all capital revenues are offset against gross capital expenditures. It follows that at the net stage, only general revenue remains as shown in Tables 28 and 29.

Sinking-fund earnings are not included in revenues. These amounted in 1946 to: Prince Edward Island, \$118,000; Nova Scotia, \$467,000; New Brunswick, \$535,000; Quebec, \$1,880,000; Ontario, \$2,000; Manitoba, \$374,000; Saskatchewan, \$1,124,000; Alberta, \$4,000 and British Columbia, \$674,000. In previous years, amounts similar to those shown in Tables 29 and 30 as 'Non-Revenue and Surplus Receipts' and 'Non-Expense and Surplus Payments' amounting to \$3,697,000 and \$2,699,000, were excluded. Revenue previously described as 'Public Domain' is nearly all included under 'Privileges, Licences and Permits—Natural Resources'; the remainder now appears under 'Sales and Services'. Likewise, 'Liquor Control' revenues are now shown under five different headings: 'Taxes—Alcoholic Beverages', 'Privileges, Licences and Permits—Liquor Control and Regulation', 'Fines and Penalties', 'Contributions from Government Enterprises—Profits (Liquor)' and 'Other Revenue'; the latter category includes confiscations under liquor control. The analysis of moneys received from the Federal Government as between Taxation Agreement and Subsidies is also worthy of emphasis.

The expenditures classification is also changed considerably. 'Legislation' is now a sub-caption under 'General Government'; 'Highways, Bridges and Ferries' is now under 'Transportation and Communications'; and 'Public Welfare' is now referred to as 'Health and Social Welfare' with a more detailed analysis than

heretofore. Some expenditures previously included under 'Education' are now shown under 'Recreational and Cultural Activities'. 'Public Domain' becomes 'Natural Resources and Primary Industries' with a comprehensive analysis which includes 'Agriculture', (previously a main heading). Whereas in past years, expenditures on debt retirement were excluded, they are included in these tables for the year 1946. Comparisons therefore between expenditures for 1946 and preceding years would have to take into account the amount shown in Table 30 and described as 'Funded Debt Retirement' amounting to \$21,920,000.

### Subsection 2.—Debts of Provincial Governments

The average coupon rate of gross bonded debt of Provincial Governments decreased each year from 4.12 p.c. in 1942 to 3.66 p.c. in 1947. During these years also, the proportion payable in Canada only increased steadily, while that payable in New York showed a marked decline. Prince Edward Island had the smallest average coupon rate in 1947. Since publication of the 1948-49 edition of the Year Book the debt figures for the year 1946 have been revised.

<sup>1</sup> Eleven months only due to change in fiscal year.<sup>2</sup> Excludes sinking-fund investments of \$2,767,000 held by Nova Scotia Power Commission against bonds issued by the Province of Nova Scotia for the purpose of making advances to the Commission.<sup>3</sup> Includes \$8,662,000 as payment of portion of interest adjustment on unmortgaged securities deferred June 1, 1947, to 1950, inclusive.<sup>4</sup> Includes mortgages and other contracts payable. <sup>5</sup> Commitments on Public Charities Fund and on various appropriations payable to institutions.

## Section 4.—Municipal Finance\*

Material dealing with the organization and growth of municipalities in Canada as well as classification and population, which in previous editions appeared in this Section, has been expanded and may now be found in Chapter III, pp. 130-134.

### Subsection 1.—Municipal Assessed Valuations

The revenue resources of municipalities are limited generally to direct taxation, based on assessed valuations of real and other types of property. The assessment of personal property has had its ups and downs particularly in the Prairie Provinces. The Maritime Provinces, Manitoba and Alberta are the only provinces at the present time in which municipalities assess and tax personal property. In Alberta in 1946 there was an increase in the use of this basis for tax revenue by villages while in Manitoba it is used generally by all classes of municipalities except cities. Aside from real property, the next important type of valuation for taxation purposes is business assessment, although not all provinces assess for business purposes separately and distinctly from real property valuations. A variation of methods, schedules and rates exists not only between provinces but also between municipalities within the same province. Some municipalities use the rental basis, others the value of floor space occupied and still others the capital value of the premises occupied. Most of the provinces have other miscellaneous types of assessment, the general nature of which will be noted from the footnotes to Table 35. It will also be noted that income assessment, which formerly was employed in Nova Scotia and New Brunswick only, disappeared in 1943. This is a result of the operation of the Dominion-Provincial Tax Agreements whereby the provinces and municipalities abandoned the income-tax field for the duration of the War and a limited period thereafter, so as to leave it open to the Federal Treasury.

It should be noted that the figures in Table 35 are not entirely comparable, on an interprovincial basis, from the standpoint of relative values of properties taxable for municipal purposes. Each province operates under its own assessment laws, which are not all similar, either in application or in effect. For instance, in British Columbia cities and municipal districts improvements cannot be taxed on a value in excess of 75 p.c. of taxable values or in villages in excess of 50 p.c. of taxable values; the values actually taxed in 1947 ranged from nil to 75 p.c. In the majority of cases, improvements were assessed for tax purposes at 50 p.c. of taxable values, but for all municipalities the total improvements actually taxed represented approximately 48 p.c. of total taxable values. It should also be noted that Table 35 does not include assessed valuations in Improvement Districts for either Saskatchewan or Alberta. In Saskatchewan these amounted to \$28,598,170, \$27,327,995, \$26,874,190 and \$26,892,080, and in Alberta to \$61,016,330, \$63,171,742, \$62,753,779 and \$68,645,962 in 1944, 1945, 1946 and 1947, respectively. In addition there are other intra-provincial inconsistencies between municipalities which, in turn, further affect interprovincial comparisons. These may be said to be due to the lack of integrated municipal assessment systems and uniform standards for establishing values on a province-wide basis, under the direction and control of a central authority. Some provinces, however, have made considerable progress along these lines in recent years, as in the case of Saskatchewan, the results of which are referred to in the text following Table 35.

\* Revised in the Public Finance Division, Dominion Bureau of Statistics.

<sup>1</sup> Includes the following: N.S.—Household Tax; Ont.—Income of Corporations derived from interest earnings on investments discontinued in 1944; Sask.—Special Franchise; Alta.—Franchise and Other Special.

<sup>2</sup> Includes estimated values for some municipalities, also total exemptions incomplete.  
<sup>3</sup> Includes some other types of valuations not specified.  
<sup>4</sup> Includes temporary exemptions: \$61,283,443 (1944) and \$43,932,563 (1945).  
<sup>5</sup> Does not cross-add to total; complete information for some municipalities not available.

<sup>6</sup> Cities only; exemptions for other municipalities not published.  
<sup>7</sup> Includes \$192,542,560 (1944), \$201,269,083 (1945), \$223,651,933 (1946), and \$247,390,470 (1947) valuation of improvements, the total value of which was \$435,017,282 (1944), \$433,581,311 (1945), \$468,844,049 (1946), and \$511,289,782 (1947) and the maximum value at which they could be taxed was \$274,063,507 (1944), \$271,071,473 (1945), \$292,353,568 (1946), and \$379,965,133 (1947).  
<sup>8</sup> Consists of \$185,522,072 (1944), \$22,248,385 (1945), \$188,328,203 (1946), and \$190,427,963 (1947) valuation of exempted properties, and \$42,474,722 (1944) \$232,312,228 (1945), \$245,192,116 (1946), and \$263,899,312 (1947) exemptions of taxable improvements as referred to in footnote 7.

<sup>9</sup> Totals not complete.

While complete figures for tax-exempt properties are not available for each province, it will be noted from the information given that these have assumed relatively high proportions. Most provinces have shown consistent increases in taxable assessed valuations which may be attributed largely to the stimulus to business and industry in general, arising from the War. Saskatchewan, however, showed a reduction in total valuations up to 1945. This was the result of a province-wide plan of re-assessment of rural municipalities by the Department of Municipal Affairs. The subsequent trend in that Province has been upward, slightly in 1946 and substantially in 1947.

### Subsection 2.—Municipal Taxation

Table 36 shows, by provinces, the taxes levied by municipalities in comparison with collections in 1944, 1945, 1946 and 1947, and the total taxes outstanding at the end of those years. While these figures are as nearly comparable as may be obtained from existing published reports, they nevertheless reflect some inconsistencies due particularly to interprovincial variations in the division of responsibility for tax administration between municipalities and school authorities. In some instances school taxes are not included in the municipal levies. In Prince Edward Island, two only of the eight incorporated municipalities have their own individual school districts and levy and collect the school taxes. In Quebec, while school taxes, with few exceptions, are levied and collected by the school corporations which function independently of municipal authorities, they are, nevertheless, included in this tabulation for purposes of greater interprovincial comparability. It will, therefore, be apparent from the foregoing that the figures in Table 36, except in the case of Quebec, represent only the amount of tax levies, collections and arrears of the municipalities, and include school taxes only to the extent that such are also levied and collected by the municipalities for and on behalf of local school authorities. Taxes for schools outside incorporated municipal organizations are not included.

### 36.—Municipal Taxation, by Provinces, 1944-47

<sup>1</sup> Includes estimates in some instances as actual figures are not available. <sup>2</sup> Excludes \$1,328,914 in 1944, \$1,363,007 in 1945, and \$1,366,821 in 1946 and 1947, compensation through Provincial Government for loss of income tax (see p. 1036).

<sup>3</sup> Excludes cities and towns. <sup>4</sup> Cities and towns only. <sup>5</sup> Includes certain provincial and other special taxes (see text following this table), but excludes taxes in Improvement Districts. <sup>6</sup> See notes applying to the provinces. <sup>7</sup> Totals not complete.

Because of these inconsistencies and the fact also that there are considerable differences in the division of responsibility for services between the Provincial Governments and their respective municipalities, extreme caution should be exercised in using the figures in Table 36 as a basis for interprovincial comparisons of the relative burden of municipal taxation. Also, in Saskatchewan and Alberta, municipalities are required to levy certain taxes for and on behalf of the Provincial Government and for other special purposes for which there is no comparable situa-

tion in other provinces. The amounts of such taxes included in the municipal levies in these two provinces, are as follows:—

<i>Item</i>	<i>1944</i>	<i>1945</i>	<i>1946</i>	<i>1947</i>
	\$	\$	\$	\$

<b>Totals, Saskatchewan.....</b>	<b>3,859,073</b>	<b>3,987,756</b>	<b>3,767,917</b>	<b>3,983,329</b>
<b>Alberta—</b>				
Social Services, Educational and Wild Lands Taxes (Provincial).....	1,010,475	1,033,456	1,009,951	54,674

There has been only a slow steady rise in the trend of municipal tax levies in Canada in the years 1944-47. While most provinces show increases, this does not necessarily mean an increased burden on the individual taxpayer in all instances, but is more the result, in part at least, of the increases reflected in assessed valuations. In Nova Scotia and New Brunswick the increases are, to a considerable extent, due to the establishment of larger school units previously referred to in this Section, whereby some municipalities are now levying certain taxes which formerly were levied by rural school boards. Tax collections continued high in relation to total levies; this, in recent years, has resulted in substantial reductions in the amount of unpaid taxes outstanding although these are still relatively high in most provinces. The situation for different classes of municipalities varies considerably. Reference has been made heretofore to the Improvement Districts in Saskatchewan and Alberta which, although not incorporated municipalities, are nevertheless maintained by the Provincial Governments more or less as self-sustaining areas on the same basis. Taxation figures for these Districts are excluded from Table 36 but by reason of the special significance attached to them in relation to municipal organization in these provinces, and the fact that they may become incorporated, or part of existing municipalities at some future date, the corresponding information with regard to them is shown in Table 37.

<sup>1</sup> Includes Public Revenue (Provincial) Taxes of \$56,998 (1944); \$54,459 (1945); \$53,558 (1946) and \$53,619 (1947).

### Subsection 3.—Municipal Debt

The rapid growth experienced by municipalities in Canada coupled with increased demands and responsibilities for improvements, schools, utilities, and other services or facilities has resulted in the incurring of a heavy burden of debt. Debenture borrowings increased rapidly in the period 1900-12 and again during the 1920's and early 1930's. From 1933 to 1946, however, the trend was downward.

Several important factors have contributed to this decline in municipal indebtedness, not the least important of which has been the measure of control exercised by Provincial Government departments over capital expenditures involving the incurring of debt. In addition, there was a more or less orderly retrenchment during the depression years following periods of what proved to be unwarranted expansion which, along with widespread demands to ease the tax burden on real property, has resulted in capital undertakings and works requiring debenture financing being severely curtailed. A further significant factor in this regard is that the greater part of the municipal long-term debt is represented by serial or instalment-type debentures, which require yearly repayments of principal. While the benefits of debt reduction are of course manifold, certain expenditures have been sorely needed in many communities for the rehabilitation of existing assets and for new improvements necessitated by the normal expansion and development that has taken place. These were sacrificed in the earlier years mainly in the interest of the taxpayer; subsequently, after the outbreak of war in 1939, the policy of deferment was continued, if not extended, to free the financial market to the needs of the Federal Government in meeting its war financing requirements. Municipalities having been denied, either voluntarily or otherwise, improvement programs for so long, will show a natural tendency to get these under way as soon as possible in correlation with master post-war plans of the Federal and Provincial Governments. This becomes apparent in the increased amounts of debt shown for 1947 for Nova Scotia, New Brunswick, Ontario, Manitoba, Alberta and British Columbia. Indications are that an accelerating rate of increase will be recorded for 1948 and 1949. Table 38 shows figures of municipal indebtedness for 1947 and includes temporary loans and other liabilities in addition to debenture debt. A table at p. 791 of the 1941 Year Book shows the bonded indebtedness of municipalities from 1919 to 1938.

### 38.—Debt of Municipal and School Corporations for their Fiscal Years Ended in 1947

NOTE.—Compiled from published reports of Provincial Departments of Municipal Affairs, auditors reports and financial statements of municipalities, and information secured from other official sources.

<sup>1</sup> Includes \$7,701,414 net debenture debt (less sinking funds) and other capital liabilities of Separate School Boards and School Districts in unorganized areas (capital loans and debenture payments in arrears are also included in this amount). <sup>2</sup> Excludes liabilities of schools and other local boards and commissions but includes in lieu thereof amounts due by municipal revenue fund accounts to such schools and other local authorities [information required to make the necessary eliminations on this account not available from published reports (see footnote 1)]. <sup>3</sup> Excludes rural schools. <sup>4</sup> Includes \$4,088,267 treasury bills. <sup>5</sup> Includes \$2,660,860 treasury bills. <sup>6</sup> Includes \$1,213,843 tax prepayment deposits for Vancouver.

Available information indicates that the direct and indirect debt of municipalities continued during 1945 the decline which had been evident since 1940. Table 41 at p. 1006 of the 1948-49 edition of the Year Book gives figures for the years 1944 and 1945. As the statistics are not yet available for Quebec for 1946 or 1947, it is not possible to appraise the trend in those years for Canada as a whole. Retirement of direct debenture debt accounted for the major portion of the decrease during this period, although there have also been substantial reductions in unfunded liabilities. The decreases in debenture debt are due to the factors mentioned on p. 1041, while improved tax collections have made it possible for municipalities to avoid heavy temporary borrowings and reduce other current liabilities. It is pointed out however that debenture debt figures are intended to represent only principal unmatured. In general, principal past due, whether in default or unpaid because of non-presentation, has been included with accounts payable and other liabilities. The more significant items available are given in Table 39.

## PART II.—DEVELOPMENTS IN THE TAXATION FIELD

Prior to the First World War, the Federal Government was able to finance its expenditures through the imposition of such indirect taxes as customs and excise duties. There were minor direct taxes imposed for other purposes than revenue but these, in the fiscal year 1914, amounted to less than 1.5 p.c. of the total revenue from taxation collected by the Federal Government. To-day, direct taxation accounts for about 49 p.c. of federal revenue.

The unprecedented financial demands of the First World War began to be felt by 1915 and between 1915 and 1917 the Federal Government entered the direct-taxation field with the imposition of taxes on banks, trust and loan companies, insurance companies and business profits. The income tax was introduced in Canada in the latter year and continued to be an important source of revenue in the period between the two wars. The outbreak of war in 1939 and the resulting rapid expansion of government expenditures led to a very substantial increase in individual and corporation income-tax rates, the tax on excess profits was revived and made much more severe and the Federal Government entered the fields of succession duties and gasoline taxes (the latter were semi-direct) which had hitherto been imposed exclusively by the provinces.

Details of changes in the income-tax field made in the 1948-49 and 1949-50 Budgets are given at pp. 1018-1019.

The place that direct taxation has assumed in the field of general taxation and its incidence on the purse of the ordinary taxpayer has made it advisable to give this subject separate treatment but this should not detract attention from the important place that indirect taxation, through customs, excise and sales taxes, still holds in the taxation burden that the individual taxpayer is called upon to bear. (See Table 8 p. 1006.)

In 1942 the Federal Government entered the succession-duty field with the passage of the Dominion Succession Duty Act.

The main elements of direct or semi-direct taxation are given in the following sections, dealing with income tax and succession duties, respectively. As of April, 1947, the Federal Government gasoline tax, imposed in 1939, was repealed and therefore does not now find a place in this Part.

### Section 1.—Income Tax\*

The income tax was instituted in 1917, as a part of what was known as war-tax revenue. Before the outbreak of the Second World War, it had become a permanent and important part of the taxation structure, and the chief source of raising ordinary revenue. In many respects, it is an ideal form of direct taxation: in theory it has much to commend it, and the experience and machinery for the collection of this tax has been built up over a long period of years.

The Income Tax Act contains separate schedules of tax rates for individuals and corporations. With the advent of war, the yield of individual income tax was very substantially increased by reducing personal exemptions and increasing the rates of tax. While the high wartime personal income tax was in force a 'compulsory savings' feature was introduced. This resulted in the collection of refundable savings tax in the amount of approximately \$290,000,000 during the years

\* More detailed information is given in the annual report "Taxation Statistics" published by the Taxation Division, Department of National Revenue, Ottawa.

1942, 1943 and 1944. The liability, together with interest at 2 p.c. was repaid in 1948 and 1949. In the corporation field during the War the income-tax rate was increased slightly from 15 p.c. to 18 p.c. and the necessary additional revenue was secured through the application of the provisions of the Excess Profits Tax Act.

After the termination of hostilities the weight of individual income tax was reduced each year up to and including 1949. However, the normal revenue loss to be expected from the tax reduction has been largely offset by the expansion of personal incomes. In the corporation field the excess-profits tax was gradually reduced after 1945 until its abandonment at the beginning of 1948. In 1948 the corporation income-tax rate was raised from 18 p.c. to 30 p.c. concurrently with the dropping of the excess-profits tax. Changes introduced in 1949 will be found at pp. 1018-1019.

### Subsection 1.—Collection Statistics

**Collections on a Fiscal-Year Basis.**—Collection statistics are gathered at the time the payments are made and, therefore, have the value of being very up-to-date. Their timeliness has been enhanced within the past few years by the adoption of the "pay-as-you-go" system which results in collecting tax substantially during the year in which the income is earned and, on the average, about ten months prior to the actual filing of an income-tax return by the taxpayer. The payments on behalf of most taxpayers, however, are made by their employers and a cheque from one employer may cover the tax payments of hundreds of employees. At this stage, therefore, it is not possible to link the moneys received to the individuals who are, in the final analysis, contributing the tax. Collection statistics, as such, for this reason are not capable of being closely related to the persons who are being taxed and any statistical tables that attempt to describe the taxpayer, such as by occupation or income class, must be based on the income-tax return which is filed by the taxpayer many months after the payment of his tax. However, collection statistics, if interpreted along with the tax rate, do serve the purpose of indicating the general trend of income upon which tax is levied well in advance of the assessment data.

The statistics given in Table 1 represent collections on a government fiscal-year basis under the three Acts administered by the Taxation Division, Department of National Revenue.

### 1.—Taxes Collected by the Taxation Division of the Department of National Revenue, Years Ended Mar. 31, 1935-49

<sup>1</sup> Including refundable portion and therefore does not agree with the corresponding figures of columns 3 and 4, Table 10, p. 1010

### Subsection 2.—Individual Income-Tax Statistics

Individual income-tax statistics are presented herein on a taxation-year or calendar-year basis. These data are compiled from a 10 p.c. sample of all returns received and the figures are taken from the returns as declared by the taxpayer prior to any changes that may be made after scrutiny by the assessors.

**Subsection 3.—Corporation Income-Tax Statistics**

In the following tables, corporation statistics are presented on a taxation-year basis prior to assessment. The data have been extracted and compiled from the returns shortly after they have been filed and are as declared by the taxpayer without the scrutiny or revision of the Department of National Revenue. Provincial figures contain an unavoidable bias in favour of Ontario and Quebec, which is caused by the fact that many large companies which operate across Canada file their returns in one or other of these two provinces.

**Section 2.—Succession Duties\***

The first imposition of succession duties in Canada was in 1892, when Nova Scotia, New Brunswick, Quebec and Ontario enacted legislation of this nature. Legislation was passed in the other provinces on the following dates: Manitoba, 1893; Prince Edward Island and British Columbia, 1894; Saskatchewan and Alberta, 1905.

Succession duties have grown to be an important if fluctuating part of provincial revenues and Table 6 shows the receipts from this source from 1921.

In 1947 seven provinces withdrew from the succession duties field as part of general agreements for the removal of duplication of direct taxation negotiated with the Federal Government. These agreements succeeded the expiring Wartime Tax Agreements, and followed the general terms of the offer set out in the Budget

\* Revised under the direction of Dr. A. K. Eaton, Assistant Deputy Minister, Department of Finance, Ottawa.

Speech of June 27, 1946. This offer was drawn up in such terms that any province could elect to enter or not to enter into an agreement with the Federal Government and, in respect of succession duties, provided that even a province that did enter into an agreement could, if it wished, retain its own levies. As previously mentioned, seven of the nine provinces, namely, Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, Alberta and British Columbia, accepted this offer and elected to repeal their own succession duties for the period from Apr. 1, 1947, to Mar. 31, 1952. For this period, therefore, provincial succession duties will be limited to those provinces which have not accepted the Federal Government offer before the period expires.

The Federal Government provided in the 1946 Budget that, as from Jan. 1, 1947, the rates of federal duty would be doubled, and that where a provincial levy was continued a credit would be allowed against one-half of the federal duty for duty paid to a province. The existing situation, therefore, is that in provinces that have withdrawn their duties the previous combination of federal and provincial rates has been supplemented by a single federal duty at double the previous federal level, which in most cases results in the continuation of a total duty approximately the same as previously levied under the two duties combined. On the other hand, in the provinces that have not withdrawn their duties, the doubled rates of federal duty apply but may be reduced up to one-half by a credit for the duty paid to the province.

The Dominion Succession Duty Act was enacted as 4-5 Geo. VI, c. 14. Certain amendments were made to the Act by 5-6 Geo. VI, c. 25; 7-8 Geo. VI, c. 37; 8-9 Geo. VI, c. 18; and the doubling of rates and provision of the tax credit mentioned above by 10 Geo. VI, c. 46. Two important amendments were made to the Act in 1948. The former provision by which bequests to non-profit charitable organizations in Canada were exempt only up to 50 p.c. of the aggregate net value of the estate, was changed to remove this limit entirely. A second change exempted from duty all successions derived from an estate of an aggregate net value not exceeding \$50,000: formerly this exemption had applied only up to an aggregate net value of \$5,000. While estates in excess of \$50,000 remain dutiable in full, it was provided at the same time that in no case would the duty reduce the value of the estate below \$50,000.

Revenue from the federal duty is given in Table 6.

A common feature of both federal and provincial duties is the variation of rates by the degree of relationship of the beneficiary to the deceased. The four classes of beneficiaries that are established under federal law (see p. 1051) have, for example, specific rates that change with each classification, while in Ontario there are three classes of beneficiary with different rates of duty attached to each class. It is also a common feature of both federal and provincial Acts for an initial rate of duty to be charged based on the total value of the estate and an additional rate based on the bequest received by each individual. Thus, in the case of the Federal Government, a person who receives a bequest of \$50,000, say, out of an estate of \$500,000 is charged the rate for a \$500,000 estate plus an additional rate for \$50,000, and the total rate is then applied in calculating the tax on his bequest of \$50,000.

Double taxation of estates resulting from taxation of the same property by more than one province has been common in the past, but the withdrawal of seven of the provinces from the field will considerably reduce this problem. In the inter-

national field, dual taxation has been dealt with by way of tax conventions. Such a tax convention between Canada and the United States was signed on June 8, 1944. One of the terms of this convention is that shares in a corporation organized in or under the laws of the United States or any of the individual States shall be deemed to be property situated within the United States, and shares in a corporation organized in or under the laws of Canada, or of the provinces or territories of Canada, shall be deemed to be property situated within Canada.

An agreement respecting succession duties between Canada and the United Kingdom was signed June 5, 1946.

Under these circumstances, the difficulties of working out succession duty tables so as to show the combined effects of federal and provincial duties is realized. The best that can be done here is to choose typical estates in the main classes laid down in the legislation and give a picture of the combined duties applicable in such cases. This has been attempted in the following series of tables in the hope that it will be useful in presenting to the student of this subject a general knowledge of the incidence of succession duties in Canada under conditions existing at present.

#### 6.—Federal and Provincial Net Receipts from Succession Duties, Respective Fiscal Years Ended in 1921-48

NOTE.—The fiscal years of the provinces end on the following dates: P.E.I., Dec. 31 to 1942 and thereafter Mar. 31; N.S., Sept. 30 prior to 1935 and Nov. 30 thereafter; N.B., Oct. 31; Que., June 30 to 1940 and Mar. 31 thereafter; Ont., Oct. 31 prior to 1935 and Mar. 31 thereafter; Man., Apr. 30 prior to 1947 and Mar. 31 thereafter; Sask., Apr. 30 prior to 1947 and Mar. 31 thereafter; Alta. and B.C., Mar. 31.

<sup>9</sup> Figures below the rule are

for fiscal years ended nearest to Dec. 31 of year stated; due to changes in the provincial fiscal years, figures are given in several cases for broken periods.

<sup>10</sup> Ten months; Act came into force June 14, 1941.

<sup>11</sup> Fifteen months.

<sup>12</sup> Eleven months.

**Federal Duty.**—Beneficiaries are divided into four classes, as follows:—

- (1) Widow or dependent child or dependent grandchild.
- (2) Husband; parent; grandparent; child over 18 years of age, not infirm; son- or daughter-in-law.
- (3) Lineal ancestor other than parent or grandparent; brother, sister or their descendant; uncle or aunt or their descendant.
- (4) Others.

No duty is payable on estates not exceeding \$50,000, or on bequests up to \$1,000 to any one individual, nor is duty levied on gifts to the Federal Government or provinces, on residential property of certain diplomatic or consular officials, on pensions administered by the Canadian Pensions Commission or those payable by Allied Nations for war services nor on insurance moneys or annuities if the assured or person with whom contract was made was domiciled outside Canada at the time of death. Provision is made for increased exemptions and reduced duties in the case of those dying as a result of war service. Bequests to non-profit charitable organizations in Canada are exempt.

Widows are exempt up to \$20,000, dependent children to \$5,000 each and, in cases where dependent children do not benefit, the widow's exemption is increased by \$5,000 for each child who does not benefit. In the case of dependent orphaned children, there is a further exemption of \$15,000 (in addition to \$5,000) divisible proportionately among such orphans according to their number and the value of each individual benefit. Duty is payable on the excess only when the limit is passed, i.e., these exemptions are deductible exemptions.

Gifts made during the lifetime are exempt if the transfer was carried out more than three years prior to the death of the deceased and the recipient of such gifts secured full possession at the time of the transfer and the donor (the deceased) thereafter did not retain any rights therein or secure any benefits therefrom.

If gift tax payable under the provisions of the Income Tax Act has been paid in connection with the transfer made by a deceased person during his lifetime then no succession duty is payable in respect of such gift except to the extent that succession duty thereon is in excess of the gift tax.

Examples of the rates of duty and duty levied are given in Table 7.

**7.—The Incidence of Succession Duties in all Provinces (except Quebec and Ontario) on Typical Estates**

Class	Aggregate Net Value	Dutiable Value	Rate	Duty
	\$	\$	p.c.	\$
A. Widow only.....	60,000	40,000	10·6	4,240
	100,000	80,000	14·7	11,760

	100,000	100,000	20·7	20,700
	300,000	300,000	32·7	98,100
	500,000	500,000	38·7	193,500
	1,000,000	1,000,000	44·7	447,000

**The Incidence of Combined Federal and Provincial Succession Duties.** — Under the new tax agreements outlined at pp. 1048-1049, only the Provinces of Quebec and Ontario, which have not entered the agreement, have retained their own succession duties. As already mentioned, the other seven provinces elected to repeal their succession duties for the period from Apr. 1, 1947, to Mar. 31, 1952. As a consequence, the tables showing combined rates of federal and provincial duty for each province, which appeared at pp. 942-950 of the 1946 Year Book, have been deleted with the exception of those for the two above-mentioned provinces. The new condition of doubled federal duties and a tax credit up to 50 p.c. for the provincial duty has been taken into account in Tables 8 and 9. The rates under the heading "Dominion Duty" shown in the 1946 Year Book have been doubled and under "Combined Duty" the greater of (1) the amount of the federal duty (doubled rates), or (2) the provincial duty plus one-half the federal duty, is given.

In these two tables, the beneficiaries under all the classes show the duties collectable where the estate of given value is left to one beneficiary only, since it would be impossible to cover the many different classifications, exemptions and saving clauses to be found in the legislation of the respective provinces. In every case the estate is assumed to be wholly situated within the province and the beneficiary domiciled therein to be the sole heir. The reader is referred to the legislation and to the taxing authority shown under each provincial heading for more complete information.

*Quebec.*—The current legislation under which succession duties are collected is c. 18 of 1943. As stated at p. 1050, the following text and table can give only a broad outline of such duties as applied to comparable classes of beneficiaries in other provinces. Full details regarding other cases may be obtained from the Act quoted or from the Collector of Succession Duties, Provincial Revenue Offices, Quebec.

Under the legislation, beneficiaries are divided into three classes, as follows:—

- (1) Those in direct ascending or descending line between consort, between father- or mother-in-law, and son- and daughter-in-law, between step-father or step-mother and step-son and step-daughter. There is no limitation of degree in the direct ascending or descending line between these relationships.
- (2) Those in collateral line including a brother or sister, or descendant of a brother or sister of the deceased, or to a brother or sister, or son or daughter of a brother or sister, of the father or mother of the deceased.
- (3) Others.

No duty is payable when the aggregate value of the property passing to persons in Class (1) does not exceed \$10,000. This sum is increased by \$1,000 for each child who has survived or has left surviving descendants. No duty is payable on bequests up to \$1,000 to beneficiaries in Class (3) who have been in the employ of the testator for five years or more. In estates that devolved prior to Feb. 22, 1949, no duty is payable on legacies for religious, charitable or educational purposes in Quebec and the same privilege is extended to legacies for similar work outside that Province, provided that the province or State within which the work is to be carried out extends reciprocal privileges under its succession duty laws. Since February, 1949, all legacies, gifts and subscriptions for religious, charitable and educational purposes are tax-free, regardless of the country, province or State where the institutions benefiting therefrom are located.

## 8.—The Incidence of Federal and Quebec Succession Duties on Typical Estates

Class	Aggregate Net Value	Federal Duty <sup>1</sup>			Provincial Duty			Combined Duties <sup>1</sup>

	60,000	60,000	15-90	9,540	60,000	18-00	10,800	15,570
	100,000	100,000	20-70	20,700	100,000	22-00	22,000	32,350
	300,000	300,000	32-70	98,100	300,000	25-75	77,250	126,300
	500,000	500,000	38-70	193,500	500,000	28-25	142,250	239,000
	1,000,000	1,000,000	44-70	447,000	1,000,000	34-50	345,000	568,500

<sup>1</sup> The rates of federal duty shown are those actually applied but a credit may be made to the taxpayer up to one-half of this amount on account of duty paid to the provinces, see p. 1049.

*Ontario.*—The current legislation on succession duties is c. 1 of 1939 (Second Session) as amended, and full information may be obtained on application to the Succession Duty Office, Treasury Department, Parliament Buildings, Toronto.

Beneficiaries are divided into three classes, as follows:—

- (1) Widow; child; husband; parent; grandparent; grandchild; son- or daughter-in-law.
- (2) Brother; sister; nephew; niece; uncle; aunt; cousin; child of nephew or niece.
- (3) Others.

No duty is payable on estates not exceeding \$5,000 in aggregate value, nor on estates not exceeding \$50,000 devised to persons in Class (1), nor on those not exceeding \$10,000 devised to persons in Class (2). Where the aggregate value of an estate does not exceed \$50,000 the shares in such an estate passing to beneficiaries in Class (1) are exempt from duty. The same rule applies to shares of beneficiaries in Class (2) where the aggregate value does not exceed \$10,000.

Where any person in Class (3) was in the employ of the deceased for at least five years immediately prior to his death, no duty is payable with respect to any benefits which such person derived from the deceased where the total value of such benefits is not in excess of \$1,000. Such benefits however, while exempt, are nevertheless taken as a factor in fixing the rates applicable to the dutiable portions of the estate.

Requests for religious purposes to any religious organization which carries on its work solely in Canada, and charitable or educational purposes to any charitable or educational organization which carries on its work solely in Ontario are exempt from duty and are altogether ignored in the computation of duty on the portions of the estate that are not exempt. The same rule applies to the Canadian National Institute for the Blind, the Canadian Red Cross Society and other approved patriotic organizations.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

In this Chapter are assembled the statistics regarding financial institutions and transactions, other than those pertaining to insurance: the latter are dealt with separately in Chapter XXVI. Operating profits of corporations and net income to stockholders formerly dealt with in this Chapter will be found at pp. 395-398.

## PART I.—CURRENCY AND BANKING

### Section 1.—Historical Sketch

At pp. 900-905, inclusive, of the 1938 Year Book there appears a historical sketch of currency and banking in Canada, tracing certain features of the central banking system that finally led up to the establishment of the Bank of Canada. In chronological order these were:—

(1) *Central Note Issue*, permanently established with the issue of Dominion notes under legislation of 1868.

(2) *The Canadian Bankers' Association*, established in 1900 and designed to effect greater co-operation among the banks in the issue of notes, in credit control and in various aspects of bank activities.

(3) *The Central Gold Reserves*, established by the Bank Act of 1913.

(4) *Rediscount Facilities*, although originated as a war measure by the Finance Act of 1914, were made a permanent feature of the system by the Finance Act of 1923, which empowered the Minister of Finance to issue Dominion notes to the banks on the deposit by them of approved securities. This legislation provided the banks with a means of increasing their legal tender cash reserves at will.

## Section 2.—The Bank of Canada

### Subsection 1.—The Bank of Canada Act and Its Amendments

The Bank of Canada was incorporated in 1934 and commenced operations on Mar. 11, 1935. An account of the capital structure of the Bank and its transition from a privately owned institution to a wholly government-owned one is given at p. 800 of the 1941 Year Book.

The Bank is authorized to pay cumulative dividends of  $4\frac{1}{2}$  p.c. per annum from its profits after making such provision as the Board thinks proper for bad and doubtful debts, depreciation in assets, pension funds, and all such matters as are properly provided for by banks. The remainder of the profits will be paid into the Consolidated Revenue Fund of Canada and to the Rest Fund of the Bank in specified proportions until the Rest Fund is equal to the paid-up capital, when all the remaining profits will be paid into the Consolidated Revenue Fund.

The Bank may buy and sell securities of the Federal and Provincial Governments without restriction if of a maturity not exceeding two years, and in limited amounts if of longer maturity; short-term securities of the Federal and Provincial Governments may be rediscounted. It may also buy and sell short-term securities of Commonwealth countries, the United States or France without restriction if maturing within six months, and such securities having a maturity exceeding six months in limited amounts. The Bank may buy and sell certain classes of commercial paper of limited currency, and, if endorsed by a chartered bank, may rediscount such commercial paper. Advances for six-month periods may be made to chartered banks, Quebec Savings Banks, the Federal Government or any Provincial Government against certain classes of collateral, and advances of specified duration may be made to the Federal Government or any Provincial Government in amounts not exceeding a fixed proportion of such government's revenue. The Bank may accept from the Federal or Provincial Governments, or from any chartered bank or any bank incorporated under the Quebec Savings Banks' Act, deposits that do not bear interest. The Bank may buy and sell gold, silver, nickel and bronze coin, and gold and silver bullion, and may deal in foreign exchange.

The provisions regarding the note issue of the Bank of Canada are dealt with at p. 1060.

The Bank of Canada Act (24-25 Geo. V, c. 43 and amendments) provides that the Bank shall maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada. Under the terms of the Exchange Fund Order, 1940, authorizing the transfer of the Bank's gold holdings to the Foreign Exchange Control Board, the minimum gold reserve requirement has been temporarily suspended; this suspension was continued under the Foreign Exchange Control Act, 1946. The reserve, in addition to gold, may include silver bullion; balances in pounds sterling in the Bank of England, in United States dollars in the Federal Reserve Bank of New York, and in gold currencies in central banks in gold-standard countries or in the Bank for International Settlements; treasury bills of the United Kingdom or the United States of America having a maturity not exceeding three months; and bills of exchange having a maturity not exceeding 90 days, payable in London or New York, or in a gold-standard country, less any liabilities of the Bank payable in the currency of the United Kingdom, the United States of America or a gold-standard country. In accordance with the terms of the Foreign Exchange Acquisition Order, 1940, the Bank of Canada sold foreign exchange with a Canadian dollar value of \$27,734,444 to the Foreign Exchange Control Board.

The chartered banks are required to maintain a reserve of not less than 5 p.c. of their deposit liabilities, payable in Canadian dollars, in the form of deposits with, and notes of, the Bank of Canada.

The Bank acts as the fiscal agent of Canada without charge and may, by agreement, act as banker or fiscal agent of any province. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

The head office of the Bank is at Ottawa, and it has an agency in each province, namely, at St. John's, Charlottetown, Halifax, Saint John, Montreal, Toronto, Winnipeg, Regina, Calgary and Vancouver.

The Governor of the Bank is its chief executive officer and Chairman of the Board of Directors; he is assisted by a Deputy Governor and an Assistant Deputy Governor. The first appointments were made by the Government. Subsequent appointments are to be made by the Board of Directors subject to the approval of the Governor in Council.

At the first meeting of the shareholders on Jan. 23, 1935, seven directors were elected with terms as follows: one director, until the third annual general meeting (1938); two, until the fourth (1939); two, until the fifth (1940); and two, until the sixth annual general meeting (1941). Former directors continued in office when the Government took over the management of the Bank but directors are now appointed by the Minister of Finance with the approval of the Governor in Council for terms of three years. In 1948 there were eleven directors.\* In the transaction of the business of the Bank, each director has one vote.

There is also an Executive Committee of the Board of Directors consisting of the Governor, Deputy Governor and one member of the Board, which must meet once a week. This Committee has the same powers as the Board but every decision is submitted to the Board of Directors at its next meeting. The Board must meet at least four times a year. The Deputy Minister of Finance is an ex officio member of the Board of Directors and of the Executive Committee, but is without vote.

The Governor alone, or in his absence the Deputy Governor, has the power to veto any action or decision of the Board of Directors or the Executive Committee, subject to confirmation or disallowance by the Governor in Council.

### **Subsection 2.—The Bank of Canada and Its Relationship to the Canadian Financial System**

An article under this title is given at pp. 881-885 of the 1937 edition of the Year Book. It deals with such subjects as the functions of the Bank, its control and regulation of credit and currency, the mechanism by which such control is exercised, the expansion and contraction of credit, the mitigation of general economic fluctuations, the control of exchange operations, the advisory function of the Bank, and its duties as the Government's banker. An article on the wartime functions of a central bank appears at pp. 803-806 of the 1942 Year Book.

### **Subsection 3.—Bank of Canada Operations**

The expansion of Bank of Canada liabilities and assets has provided for increased Bank of Canada notes in active circulation (the chartered bank-note issue is limited and is gradually being retired) and has enlarged the cash reserves of the chartered banks. The principal changes in Bank of Canada assets since April, 1938, have been (a) the rise in investments, partly to replace the gold and foreign-exchange

\* The number of directors was increased to 12 in 1949.

holdings transferred to the Foreign Exchange Control Board under the terms of the Exchange Fund Order and Foreign Exchange Acquisition Order, dated Apr. 30, 1940, and (b) the fluctuations in holdings of sterling exchange through which the Bank has temporarily financed Canadian dollar requirements of the Foreign Exchange Control Board.

<sup>1</sup> The Exchange Fund Order, 1940, authorized the transfer of the Bank's gold holdings to the Foreign Exchange Control Board and temporarily suspended the requirement for a minimum gold reserve.

### Subsection 4.—The Industrial Development Bank

The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944, commencing its banking operations on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:—

“To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises.”

The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors and Assistant Deputy Governor of the Bank of Canada. The \$25,000,000 capital stock of the Bank, now completely

paid up, was subscribed by the Bank of Canada. The Industrial Development Bank may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed three times the aggregate of the Bank's paid-up capital and Reserve Fund.

The lending powers of the Bank may be extended only to industrial enterprises in Canada with respect to which it is empowered to:—

- (1) lend money or guarantee loans;
- (2) enter into underwriting agreements with regard to any issue of stock, bonds or debentures;
- (3) acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement.

The Bank may accept any form of collateral security against its advances, including real property.

The Industrial Development Bank is intended to supplement the activities of other lending agencies rather than to compete with them and the Act of incorporation requires that it should extend credit only when the Board of Directors is of the opinion that similar credit would not be available elsewhere on reasonable terms and conditions. The Bank is specifically prohibited from engaging in the business of deposit banking.

Authorized and outstanding loans of the Industrial Development Bank as at Mar. 31, 1949, are classified by provinces, size of loans and industries in Table 2. The monthly statement of assets and liabilities of the Bank for Dec. 31, 1949, showed outstanding loans and investments at that date of \$21,068,627.

<sup>1</sup> Includes Yukon and the Northwest Territories.

<sup>2</sup> Net authorizations were \$27,616,518 of which those in excess of \$200,000 totalled \$11,814,548, because of partial repayments on account of current authorizations.

## Section 3.—Currency

### Subsection 1.—Notes and Coinage

**Note Circulation.**—The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described at pp. 900-905 of the 1938 Year Book. The main steps of this development that remained as permanent features of the system are outlined at pp. 809-810 of the 1941 Year Book.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of \$1, \$2, \$5, \$10, \$20, \$50 and \$100. Deposits of chartered banks at the Bank of Canada completed the replacement of the old Dominion notes of \$1,000 to \$50,000 denomination that had previously been used as cash reserves.

The chartered banks were required under the Bank Act of 1934 to reduce the issue of their own bank notes gradually during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the 1944 revision of the Bank Act cancelled the right of chartered banks to issue or reissue any notes after Jan. 1, 1945, and after January, 1950, the chartered banks' liability for such of their notes as then remained outstanding was transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

As a result of the changes indicated above, data since 1935 on bank-note circulation are not comparable with those of earlier years though statistics of total notes in the hands of the general public are comparable. This public circulation includes chartered bank notes together with Dominion or Bank of Canada notes, exclusive of those held by the banks as reserves.

Since 1935 there has been little change in the circulation of denominations under \$5. In most of the denominations from \$5 to \$100, where Bank of Canada notes have largely replaced chartered bank notes or Dominion notes, there has been a decided increase.

### 3.—Denominations of Bank of Canada, Dominion and Other Notes in Circulation for Certain Years, 1926-48

NOTE.—Annual averages of month-end figures. The totals outstanding are not always multiples of the denominations of notes because of adjustments made according to scale when parts of mutilated notes are turned in for cancellation.

<sup>1</sup> Gross note circulation of chartered banks less notes held by other chartered banks.

<sup>2</sup> Total

issue less notes held by chartered banks and notes deposited in the Central Gold Reserves up to March, 1935.

<sup>3</sup> Figures, to nearest million, supplied by the Bank of Canada.

<sup>4</sup> Figures based on

estimates of population as given at p. 155.

<sup>5</sup> Gross note circulation only; notes held by other chartered banks cannot be subtracted since they are not available.

**Coinage.\***—The present monetary standard of Canada is gold of 900 millesimal fineness (23.22 grains of pure gold equal to one gold dollar). Under the Uniform Currency Act of 1871, gold coin has been authorized but only very limited issues were ever made. Gold coins have not been struck since 1919. The British sovereign and half-sovereign, and United States eagle, half-eagle and double eagle are legal tender. Subsidiary coin consists of \$1, and 50-, 25- and 10-cent silver pieces,† 5-cent nickel and 1-cent bronze pieces. Subsidiary silver coin is legal tender to the amount of 10 dollars. The 5-cent piece is legal tender up to five dollars and the 1-cent bronze coin up to 25 cents. There is no provision for the redemption of subsidiary coin. A table at p. 807 of the 1941 Year Book gives particulars of weight, fineness, etc., of current coins.

\* Revised by the Royal Canadian Mint, Ottawa.

† The Currency Act of 1910 made provision for a silver dollar and a 5-cent silver coin. The 5-cent silver coin was coined freely until 1921. It still has limited legal tender but has been replaced in the coinage by the nickel 5-cent piece. In 1942 a 5-cent piece was coined from 'tombac', a copper-zinc alloy, in order to conserve nickel for war purposes, and this coin was replaced in 1944 by a 5-cent coin composed of mild steel with a chromium finish. The current coin is pure nickel.

## 5.—Circulation of Canadian Coin as at Dec. 31, 1939-48

NOTE.—The figures are of net issues of coin. Figures for the years 1901-25 are given at p. 858 of the 1927-28 Year Book and for 1926-38 at p. 956 of the 1946 edition.

<sup>1</sup> Per capita figures are based on estimates of population as given at p. 155.

**The Royal Canadian Mint.**—The Ottawa Mint was established as a branch of the Royal Mint under the (Imperial) Coinage Act, 1870, and opened on Jan. 2, 1908. By 21-22 Geo. V, c. 48, it was constituted a branch of the Department of Finance, and by the Proclamation of Nov. 14, 1931, issued under Sect. 3 of that Act, it has, since Dec. 1, 1931, operated as the Royal Canadian Mint. At first the British North American provinces, and later the Dominion of Canada, obtained their coins from the Royal Mint at London or from The Mint, Birmingham, Limited, England. In its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation, of British sovereigns and of small coins struck under contract for Newfoundland and Jamaica. Before 1914, small quantities of gold bullion were refined, but during the First World War the Mint came to the assistance of the British Government by establishing a refinery in which nearly 20,000,000 fine oz. of South African gold were treated on account of the Bank of England. The subsequent development of the gold-mining industry in Canada has resulted in gold-refining becoming one of the principal activities of the Mint. Most of the fine gold produced from the rough shipments from the mines is delivered to the Department of Finance (since Mar. 11, 1935, the Bank of Canada has acted as agent for the Government) in the form of bars of approximately 400 fine oz. each, the rest being sold in convenient form to manufacturers. The fine silver extracted from the rough gold, when not required for coinage, is sold at New York or disposed of to local manufacturing firms.

An account of the organization and operational methods of the Royal Canadian Mint is given at pp. 888-892 of the 1940 Year Book.

## 6.—Annual Receipts of Gold Bullion at the Royal Canadian Mint, and Bullion and Coinage Issued, 1939-48

NOTE.—Although not presented in exactly the same form, figures for 1901-16 are given at pp. 857-858 of the 1927-28 Year Book; for 1917-25 at p. 894 of the 1936 edition. Comparable figures to those shown below for 1926-38 are given at p. 957 of the 1946 edition.

### Subsection 2.—Money Supply

During 1947 the Bank of Canada developed a presentation of statistics concerning money supply and related bank assets which differs in several important respects from the table presented in previous issues of the Year Book. It is believed that the new series provides a better approach to the problem of measuring changes in the volume of money under present-day conditions though, unfortunately, the Bank of Canada series has been carried back to 1938 only, whereas the former Dominion Bureau of Statistics series was available from 1919 (see pp. 1022-1023 of the 1947 Year Book).

In measuring the volume of money it is necessary to decide which categories of bank deposits should be classed as 'money' and which, by their nature, should be regarded more appropriately as part of the public's other liquid asset holdings such as Government bonds. Generally, it has been satisfactory to classify bank deposits as money if cheques may be drawn against them. In other countries this criterion has seemed to work fairly well because cheques may not be drawn against savings deposits. In Canada, however, cheques are, in practice, drawn freely against savings deposits and this has always posed an awkward problem when trying to assemble volume of money statistics. To omit all savings deposits of chartered banks would ignore the obvious fact that for many people a savings account is an active chequing account which is very similar to a current deposit. On the other hand it is known from available information that, of the total amount on deposit in savings accounts in Canada, much the larger part is, in practice, inactive. Chartered banks pay interest on the minimum quarterly balances in personal savings accounts, i.e., on the sum that has been left undisturbed for the quarterly period; from the amount of interest that is actually paid on this basis as compared with the nominal rate of interest, it is apparent that the aggregate minimum quarterly balances in personal savings accounts are about five-sixths of the total of such deposits at the present time.

It is felt, therefore, that a more realistic picture of monetary developments in Canada—and one more comparable with the usual presentation of similar statistics in other countries—is obtained by omitting the minimum quarterly balances in personal savings deposits and non-personal notice deposits from volume-of-money statistics. It has seemed preferable to exclude these deposits from the volume of money on the basis that they are inactive in practice rather than to include them on the grounds that they are potentially active because cheques may be issued against them.

The published returns of Canadian chartered banks include among assets "Cheques on Other Banks" which represents the amount of cheques that have been credited to the deposit account of the payee but not yet cleared against the deposit account of the drawer. To the extent of such items in 'float' there is, therefore, duplication in the figures of bank deposits. In Table 7 "Cheques on Other Banks" has been deducted from the figure of chartered bank deposits in order to eliminate this duplication.

Government deposits are given different treatment in different countries as far as volume-of-money statistics are concerned. In most cases the commonly used figure of bank deposits excludes Government deposits and, on the whole, it appears preferable to exclude Federal Government deposits from the Canadian money-supply figures.

## 7.—Summary Statistics of Money Supply, 1939-48

(Millions of dollars)

Year	Currency Outside Banks <sup>1</sup>			Bank Deposits			Money Supply
	Notes	Coin	Total Currency	Chartered Bank Net <sup>2</sup>	Bank of Canada 'Other' Deposits <sup>3</sup>	Total Bank Deposits	
1939.....	247	34	281	1,071	18	1,089	1,370
1940.....	341	38	379	1,174	10	1,184	1,563
1941.....	450	42	492	1,403	6	1,409	1,901
1942.....	633	49	682	1,648	19	1,667	2,349
1943.....	794	55	849	1,859	18	1,877	2,726
1944.....	930	60	990	2,135	28	2,163	3,153
1945.....	992	63	1,055	2,429	30	2,459	3,514
1946.....	1,031	65	1,096	2,806	94	2,900	3,996
1947.....	1,046	66	1,112	2,764	68	2,832	3,944
1948.....	1,115	70	1,185	3,069	81	3,150	4,335

<sup>1</sup> Note circulation excluding notes held by chartered banks together with total coin issued by the Mint, less coin held by the banks. <sup>2</sup> Demand and notice deposits, deposits of Provincial Governments, United Kingdom and foreign banks; less 'float' deposits, that is, cheques on banks as shown in month-end returns. <sup>3</sup> Excludes Federal Government, chartered bank and foreign deposits.

## Section 4.—Monetary Reserves

## Subsection 1.—Bank of Canada Reserves

The composition of Canadian gold reserves held by the Government is presented in the 1936 edition of the Year Book, at p. 895, for the years 1905 to 1934. Since March, 1935, the gold reserves have been held by the Bank of Canada. By authority of the Exchange Fund Act (c. 60, 1935), effective in July, 1935, they are valued at the current market price of gold. The new data are to be found under the item "Reserves" in the "Assets" section of Table 1, p. 1058. As explained in the footnote to that table, under the Exchange Fund Order of Apr. 30, 1940, the gold reserves of the Bank of Canada were transferred to the Foreign Exchange Control Board and the requirement that the Bank should maintain a reserve of gold equal to not less than 25 p.c. of its total note and deposit liabilities in Canada was temporarily suspended.

## Subsection 2.—Chartered Bank Canadian Cash Reserves

**Before the Establishment of the Bank of Canada.**—Up to March, 1935, legal tender cash reserves in Canada were made up partly of Dominion notes, partly of gold coin and bullion, and subsidiary coin, including these forms of cash held by the banks themselves, and as deposits in the Central Gold Reserves. In so far as these reserves were in actual gold or were in Dominion notes backed by gold, they were subject to the expanding or contracting influences of monetary gold imports or exports arising from Canada's balance of international payments, so long as Canada was on the gold standard.

**Since the Establishment of the Bank of Canada.**—When the Bank of Canada was established, the chartered banks turned over their reserves of gold in Canada and Dominion notes to the new bank in exchange for deposits with, and notes of, the Bank of Canada. It was provided that, henceforth, the chartered banks were to carry reserves in these forms amounting to at least 5 p.c. of their

deposit liabilities in Canada. Since that time, therefore, the gold reserves against currency and bank credit have been in the custody of the central bank, except as affected by the Exchange Fund Order, 1940, as explained under Bank of Canada reserves in Subsection 1, p. 1064.

### 8.—Annual Averages of Cash Reserves of the Chartered Banks, 1939-48

NOTE.—Figures, to nearest million, supplied by the Bank of Canada. Cash reserves include notes and deposits with the Bank of Canada. Figures for the years 1926-38 are given at p. 960 of the 1946 Year Book.

Year	Annual Average of Daily Figures	Annual Average of Month-End Figures	Year	Annual Average of Daily Figures	Annual Average of Month-End Figures
	\$	\$		\$	\$
1939.....	269,000,000	268,000,000	1944.....	538,000,000	527,000,000
1940.....	289,000,000	287,000,000	1945.....	603,000,000	593,000,000
1941.....	313,000,000	308,000,000	1946.....	672,000,000	673,000,000
1942.....	342,000,000	340,000,000	1947.....	670,000,000	665,000,000
1943.....	423,000,000	413,000,000	1948.....	711,000,000	705,000,000

## Section 5.—Commercial Banking

### Subsection 1.—Historical

Since one of the chief functions of the early banks in Canada was to issue notes to provide a convenient currency or circulating medium, it has been expedient to cover both currency and banking in the one historical sketch, which is given at pp. 901-905 of the 1938 Year Book. A list of the banks at Confederation appears at p. 897 of the 1940 Year Book and bank absorptions since 1867 are given at pp. 812-813 of the 1941 edition. A table at pp. 894-895 of the 1937 Year Book shows the insolvencies from Confederation; the last insolvency occurred in 1923.

A summary of the more important changes resulting from the revision of the Bank Act in 1944 is given at pp. 961-962 of the 1946 Year Book.

### Subsection 2.—Combined Statistics of Chartered Banks

In order to afford a clear view of the nature of banking transactions in Canada, bank liabilities have been classified in Table 9 in two main groups: liabilities to shareholders and liabilities to the public. Only the latter group is ordinarily considered when determining the financial position of any such institution. Assets are divided into four groups, 'other assets' being included in the total. Of interest to students of banking practice, the relative rates of increase of capital and reserve funds may be noted, also the great increase in the proportion of liabilities to the public to total liabilities, and the gradually increasing percentage of liabilities to the public to total assets. The declining proportion of notes in circulation to total liabilities to the public is also characteristic of the evolution of banking in recent times. Holdings of Federal and Provincial Government and municipal securities were relatively insignificant prior to the War of 1914-18.

### 9.—Historical Statistics of Chartered Banking in Canada, 1933-48

NOTE.—These statistics are yearly averages computed from the twelve monthly returns in each year. Figures for the years 1867-1880 will be found at pp. 918-919 of the 1938 Year Book; for the years 1881-1915 at pp. 815-816 of the 1941 edition; for the years 1916-26 at pp. 963-964 of the 1946 edition; and for the years 1927-32 at pp. 1025-1026 of the 1947 edition.

<sup>1</sup> Since 1946 the end of the accounting year has been Sept. 30.

**Cheque Payments.**—Business operations consist of innumerable individual transactions, the great majority of which employ money either in the form of currency or cheques drawn against bank deposits. It is well known that business transactions are predominantly concluded by the use of cheques rather than by payment in currency. The employment of cheques, being the one element normally common to a large proportion of economic transactions, provides an excellent index of the business trend at any given time. The changes in direction that take place in the economy are reflected by the amount of cheques cashed or otherwise paid.

The value of cheques cashed rose to a higher position in 1948 than in any other year. The country-wide total was more than 8 p.c. greater than that of 1947. Increases were achieved consistently year by year from 1938, reflecting the marked expansion in business activity occasioned by the War and its aftermath. The replenishment of shortages in consumer goods, the high level of capital formation on a physical footing and especially the marked advance in prices were the main generating forces for the continuance of the advance in financial transactions during the year.

Gains were practically general in the 33 clearing-house centres. Toronto and Winnipeg, two of the largest cities, bettered their share of the Canadian aggregate. While increases were shown in each of the five economic areas, the Maritimes, Ontario and the Prairie Provinces were prominent in this respect.

**15.—Cheques Cashied at Individual Clearing-House Centres, 1944-48**

NOTE.—Figures for earlier years will be found in the corresponding tables in previous Year Books.

**Subsection 3.—Statistics of Individual Chartered Banks**

**Assets and Liabilities.**—Cash reserves against deposits as shown in Table 16 for the years 1944-48 comprise the total of Bank of Canada notes in the possession of the chartered banks together with their deposits at the Bank of Canada. Before the establishment of the Bank of Canada in 1935, the figures comprised the totals of the banks' holdings of gold and coin in Canada, Dominion notes, and that part of their deposits in the Central Gold Reserve not required against their note issues.

## 16.—Principal and Total Assets of Individual Chartered Banks, 1944-48

NOTE.—The statistics in this table are averages computed from the twelve monthly returns in each year. Figures for earlier years will be found in the corresponding table in previous Year Books.

**Earnings of Chartered Banks.**—The chartered banks of Canada are for the most part nation-wide institutions, doing business in all parts of the country. Their earnings, therefore, reflect with very considerable accuracy the fluctuations of general business.

<sup>6</sup> Exclusive

**Branches of Chartered Banks.**—During the period from 1881 to 1901, the number of chartered banks doing business in Canada under the Bank Act remained almost the same (36 in 1881 and 1891, and 34 in 1901), but during the present century there has been in banking, as in industry, an era of amalgamations, the number of banks having declined to 25 in 1913 and to 10 in 1931. That this has been far from involving a curtailment of banking facilities is seen in Table 9, which shows the development of the banking business since 1933, and in Table 19, which compares the number of branch banks existing in Canada at different periods, and indicates a growth from 123 in 1868 to 4,676, inclusive of sub-agencies, at Dec. 31, 1920. As at Dec. 31, 1944, the total stood at 3,087 (exclusive of 132 branches and 3 sub-agencies in other countries) the reduction having resulted from the closing

of some unprofitable branches, and also from contractions brought about by war-time conditions. By Dec. 31, 1948, the total had increased to 3,410 (exclusive of 137 branches and four sub-agencies outside Canada).

The number of branches of Canadian banks doing business outside Canada increased rapidly during the First World War and the early post-war period, rising to a total of 206 in 1921. The number gradually declined to 136 in 1947; in 1948 it was 137.

## Section 6.—Government and Other Savings Banks

There are three distinct types of savings banks in Canada in addition to the savings departments of the chartered banks and of trust and loan companies. First there is the Post Office Savings Bank, in which the deposits are a direct obligation of the Federal Government. Secondly, there are Provincial Government savings banking institutions in Ontario and in Alberta, where the depositor becomes a direct creditor of the province. Thirdly, there are, in the Province of Quebec, two important savings banks, the Montreal City and District Savings Bank and La Banque d'Économie de Québec, established under federal legislation and reporting monthly to the Department of Finance. Other agencies for the promotion of thrift are the co-operative credit unions, which encourage the regular saving of amounts too small to deposit in a bank.

**Post Office Savings Bank.**—The Post Office Savings Bank was established under the Post Office Act of 1867 (31 Vict., c. 10) in order to “enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the nation to every depositor for repayment of all money deposited by him together with the interest due thereon”. Branches of the Federal Government Savings Bank under the Department of Finance were gradually amalgamated with this Bank over a period of 50 years, the amalgamation being completed in March, 1929.

## 22.—Financial Business of the Post Office Savings Bank, as at Mar. 31, 1943-48

NOTE.—Figures of total deposits for 1868-1917 will be found at pp. 833-834 of the 1926 Year Book and for 1918-42 at p. 978 of the 1946 edition.

**Provincial Government Savings Banks.**—Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta. A similar institution was in operation in Manitoba from 1924 to 1932, when the depositors' accounts were taken over by the chartered banks.

**Ontario.**—The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 session and in March, 1922, the first branches were opened. Interest at the rate of 1 and  $1\frac{1}{2}$  p.c. per annum compounded half-yearly is paid on accounts. The deposits are repayable on demand. Total deposits at Mar. 31, 1949, were \$65,149,170, and the number of depositors at that date was, approximately, 100,000. Twenty-two branches are in operation throughout the Province.

**Alberta.**—In Alberta, the Provincial Treasury receives savings deposits and issues demand savings certificates bearing interest at  $1\frac{1}{2}$  p.c., or term certificates for one, two, three, four or five years, in denominations of \$25 and upwards, bearing interest at 2 p.c. for one or two years,  $2\frac{1}{4}$  p.c. for three or four years and  $2\frac{1}{2}$  p.c. for five years. The total amount in savings certificates at Mar. 31, 1949, was \$1,030,964 made up of \$188,639 in demand certificates and \$842,325 in term certificates.

In addition, savings deposits are accepted at 45 Provincial Treasury Branches throughout the Province. The total of these deposits at Mar. 31, 1949, was \$14,755,105 made up of \$10,680,630 bearing interest at  $\frac{1}{2}$  of 1 p.c. to  $1\frac{1}{2}$  p.c. and payable on demand, and \$4,074,475 bearing interest at 1 p.c. to 2 p.c. and payable one year after deposit.

**Penny Banks.**—Operations of the Penny Bank of Ontario were suspended in 1943 and the Penny Bank Act (R.S.C. 1927, c. 13) was repealed in 1948.

**Other Savings Banks.**—The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871, had at Mar. 31, 1949, a paid-up capital and reserve of \$6,000,000, savings deposits of \$160,628,774, and total liabilities of \$167,421,415. Total assets amounted to \$167,771,628, including over \$138,000,000 of federal, provincial and municipal securities. La Banque d'Économie de Québec, founded in 1848 (as La Caisse d'Économie de Notre-Dame de Québec) under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855, and given a federal charter by 34 Vict., c. 7, had at Mar. 31, 1949, savings deposits of \$23,621,841, and a paid-up capital and reserve of \$3,000,000. Liabilities amounted to \$27,598,745 and total assets to \$27,971,055.

Table 23 shows the savings deposits in the Montreal City and District Savings Bank and La Banque d'Économie de Québec for the years ended Mar. 31, 1935-49.

### 23.—Deposits in the Montreal City and District Savings Bank and La Banque d'Économie de Québec, Years Ended Mar. 31, 1935-49

NOTE.—Figures for the years 1868-1926 appear at pp. 833-834 of the 1926 Year Book; for the years 1927-34 at p. 980 of the 1946 edition.

**Credit Unions.\***—A credit union is a regularly incorporated group of persons who have joined together to pool and save their money in order to make available for themselves and other members a fund from which members may borrow at reasonable rates of interest for "provident and productive purposes".

This idea was introduced to the North American continent by a Canadian and the first credit union was established in 1900 at Lévis, Que. In 1948 there were 1,078 credit unions in the Province of Quebec alone. In 1922, Ontario passed legislation providing for the legal incorporation of credit unions and by 1939 all provinces had enacted similar legislation. For the year 1948 there were 2,608 credit unions chartered in Canada with a total reported membership of 850,608. This represents an increase of 92 credit unions during the year and an increase in membership of about 71,000 people. Total assets in 1948 were \$253,600,000 compared with \$221,000,000 in 1947. Total savings of credit-union members in Canada during 1948 amounted to \$239,300,000, an increase of over \$30,000,000 during the year. Loans to members in 1948 amounted to \$130,300,000 and since the inception of the first credit union 49 years ago a total of over \$555,000,000 has been lent to members for various purposes.

The Province of Quebec leads in credit-union activity, reporting a membership of almost 540,000 and total assets of over \$205,000,000. Ontario follows with 371 credit unions, a membership of 95,000 and assets of \$16,500,000.

**Leagues and Federations.**—In all provinces credit unions are organized into one or more groups known as leagues or federations. There are in Canada a total of 14 different leagues and federations which count among their membership the majority of all chartered credit unions. The purpose of these leagues and federations is to encourage and assist in the organization and promotion of credit unions, to aid in management and to give advice in bookkeeping and accounting procedures. Some leagues also arrange for group bonding of treasurers and the co-operative purchase of bookkeeping and office supplies. Most of these leagues are affiliated with the Credit Union National Association (CUNA) in the United States, a national body organized for the protection and promotion of credit unions in that country. CUNA also makes available to affiliated leagues certain insurance services as well as credit union supplies on a co-operative basis.

**Central Credit Unions.**—As credit unions grew and developed the need for central banking facilities became apparent and, accordingly, provincial central credit unions with membership open to credit unions, and in some provinces to co-operatives as well, were organized to provide loans from the surplus funds of other member organizations. There are now in Canada 19 such central credit unions, 10 of which are located in the Province of Quebec.

Under the guidance of the Co-operative Union of Canada, a national committee has been studying the possibility of a national co-operative credit society which will serve as a central bank for the various provincial central credit unions.

---

## Section 7.—Foreign Exchange

### Subsection 1.—Exchange Rates

A brief account of foreign exchange rates to 1948 is given at p. 1052 of the 1948-49 Year Book.

Since then, under pressure of dollar shortage and dwindling resources of the Commonwealth pool's dollar holdings, the pound was devalued, Sept. 18, 1949, by 30·5 p.c. to the new rate of \$2·80 in U.S. currency. Almost all Sterling Area (with the exception of Pakistan and British Honduras) and many other countries devalued their rates of exchange by 8 to 33 p.c. On Sept. 19, a new rate of exchange for the Canadian dollar was established at about 10 p.c. below the old, the new buying rate for the U.S. dollar being set at \$1·10 Canadian.

### Subsection 2.—The Foreign Exchange Control Board\*

The following paragraphs cover the main operations of the Foreign Exchange Control Board during 1948 and the first half of 1949. They are based largely on the Board's Report for 1948. Reviews of the Board's activities in earlier years may be found in previous Year Books.

**Changes in Canada's Foreign Exchange Reserves.**—The variations in Canada's holdings of gold and U.S. dollars since the commencement of exchange control are given in Table 26. The developments in the balance of international payments which gave rise to the increase during 1948 are reviewed in the Foreign Trade Chapter at pp. 945-952.

<sup>1</sup> Includes private holdings, exclusive of working balances, of \$132,000,000 at Sept. 15, 1939, \$98,000,000 at Dec. 31, 1939, and \$2,000,000 at Dec. 31, 1940. <sup>2</sup> Sept. 15. <sup>3</sup> Excludes \$18,200,000 borrowed in the United States in August, 1949, and set aside for the retirement, on Feb. 1, 1950, of a security issue guaranteed by the Federal Government and payable at the holder's option in United States dollars.

**Changes in Exchange Control Policies and Methods.**—Since the latter part of 1948, sympathetic consideration has been given by the Foreign Exchange Control Board to applications by residents who wish to obtain United States dollars to exploit patent rights abroad, acquire distribution franchises abroad similar to those operated in Canada and to establish businesses abroad of the same type as those carried on in Canada by the applicants. Prior to that time, applications to make new direct capital investments in United States dollars were approved only in cases where they would produce exports from Canada or secure necessary sources of imports. In both types of applications, where appreciable amounts are involved, financing through non-resident sources is ordinarily required.

\* Revised under the direction of R. H. Tarr, Secretary, Foreign Exchange Control Board, Ottawa.

Since November, 1948, favourable consideration has been given to applications by Canadian subsidiaries and branches of foreign companies, which had an accumulation of earnings made since 1939, to remit more than one years accumulated earnings in cases where their net cash position is abnormally large and clearly surplus to their actual and anticipated requirements. Previously, remittances of earnings were limited to one years earnings during each fiscal year of an applicant.

Certain types of payments by residents to non-residents, which represent withdrawals of capital from Canada by the latter, have been approved only on condition that the non-residents simultaneously reinvest the Canadian dollars in certain types of Canadian domestic securities. These securities they were then free to sell on the United States market. This procedure had the disadvantage of increasing the cost to Canadians of acquiring productive capital assets owned in Canada by non-residents, since the discount on Canadian domestic securities in the United States market has been greater than that on Canadian dollars. Since the latter part of 1948, applications have been considered for the acquisition from non-residents for Canadian dollars, without requiring reinvestment, of assets such as timber limits and mining, oil and gas properties which are required in connection with operations being carried on in Canada by the residents and also for the acquisition by residents of outright ownership or effective control of non-resident-owned or -controlled productive enterprises in Canada.

In November, 1948, the Board was instructed to limit the amount of United States dollars made available to Canadian residents for travel except for business, health or educational purposes to \$150 per person (\$100 in the case of children under 11 years) during the period from Nov. 16, 1948, to Nov. 15, 1949. This is the same as the travel ration for the preceding twelve-month period. The arrangement was continued for a further period of twelve months in November, 1949.

Since March, 1949, Canadians have been able to obtain permits through their banks for the expenditure of any reasonable amounts of Canadian dollars for travel in France, Belgium, Luxembourg, the Netherlands and Norway. As far as Canadian travellers are concerned these countries are, therefore, now placed in a similar position to those in the Sterling Area. Previously, travel expenditure in the former countries was, in practice, made in United States dollars. In March, 1949, arrangements were completed whereby Canadian dollars spent in these countries for travel purposes would be convertible into local currencies at the same rate as would United States dollars; since then, however, these travel expenditures have been authorized in Canadian dollars or local currencies only. Effective July 11, 1949, the Foreign Exchange Control Regulations were amended to add Sweden to the list of 'special arrangement' countries. In consequence Canadian dollars have since that time been acceptable in payment for exports to Sweden, and reasonable amounts of Canadian dollars for travel expenditure there have been authorized. Late in August, 1949, Switzerland was added to these countries.

Under the Foreign Exchange Control Act a permit from the Foreign Exchange Control Board is required for the sale of goods for export from Canada otherwise than on terms providing for payment of the fair value within six months in a currency designated in the Regulations as acceptable therefor. Until the latter part of 1948 there was little occasion for exporters to seek to export on terms other than those specified. With the growing severity of import and exchange restrictions imposed by many countries there have arisen an increasing number of cases where goods cannot be exported on the prescribed terms of payment. Where in these cases alternative proposals for payment are acceptable to foreign buyers and Canadian exporters the Board has indicated its readiness to consider applications for the necessary permits.

The main types of cases which appear to warrant consideration are those where—  
(a) payment is to be deferred beyond the normal six-month period, or (b) payment is to be received in currencies not freely convertible into United States dollars or into sterling and the exporter is prepared to assume the risks involved or (c) payment is to be received in sterling from a non-sterling area country where the United Kingdom exchange control authorities are prepared to authorize the transfer, or (d) payment is to be received in the form of goods of equivalent value.

On Apr. 7, 1949, the Foreign Exchange Control Regulations were amended as required by the entry of Newfoundland into Confederation. As the system of foreign exchange control in force in Newfoundland before Union differed only in comparatively minor details from that in force in Canada, the change-over did not give rise to any appreciable change in foreign exchange control practices in either area.

On Mar. 25, 1949, the Foreign Exchange Control Act was amended to provide for its continuance in force until sixty days after the commencement of the first session of Parliament commencing in the year 1951.

## PART II.—MISCELLANEOUS COMMERCIAL FINANCE

### Section 1.—Loan and Trust Companies\*

The 1934-35 Year Book presents at p. 993 an outline of the development of loan and trust companies in Canada from 1844 to 1913.

The laws relating to loan and trust companies were revised by the Loan and Trust Companies Acts of 1914 (4-5 Geo. V, cc. 40 and 55), with the result that the statistics of provincially incorporated loan and trust companies ceased to be collected. However, summary statistics of provincial companies for 1946 and 1947 have been supplied by those companies and are included in Table 1 in order to complete the statistics for loan and trust companies throughout Canada. It is estimated that more than 90 p.c. of the business of provincial companies is represented in the figures, so that they may be accepted as fairly inclusive and representative of the volume of business transacted as compared with Dominion registered companies. The statistics of Tables 2 and 3 refer only to those companies operating under Dominion charter, except that, beginning with 1925, the statistics of loan companies and trust companies incorporated by the Province of Nova Scotia and brought by the laws of that Province under the examination of the Federal Department of Insurance, have been included in Tables 2 and 3 as well as those for trust companies in New Brunswick since 1934 and in Manitoba since 1938. In 1920, the Department of Insurance took over from the Department of Finance the administration of the legislation concerning Dominion loan and trust companies.

The progress of the aggregate of loan company business in Canada is indicated by the increase in the book value of the assets of all loan companies from \$188,637,298 in 1922 to \$213,649,794 in 1931, and to \$231,125,916 in 1947. The assets of trust companies (not including estates, trust and agency funds, which cannot be regarded as assets in the same sense as company and guaranteed funds) increased from \$154,202,165 in 1928 to \$332,937,016 in 1947. In the former year, the total of estates, trust and agency funds administered amounted to \$1,077,953,643 and in 1947 to \$3,216,862,714.

\* Revised under the direction of R. W. Warwick, Superintendent of Insurance, Department of Insurance, Ottawa.

**Functions of Loan Companies.**—The principal function of loan companies is the lending of funds on first-mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings-department deposits. In the war years from 1939 to 1945 the amount invested in mortgages declined by almost \$27,000,000, which was practically all accounted for by an increase in the amount of bonds and stocks held. The 1947 figure of \$79,000,000 was greater by \$6,000,000 than that for 1946.

**Functions of Trust Companies.**—Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies and, where so appointed, as authorized trustees in bankruptcy. Such companies receive deposits for investment, but both the investing and lending of such deposits and of actual trust funds are restricted by law.

**Statistics of Loan and Trust Companies.**—The figures in Table 1 are of particular interest in the case of trust companies. On account of the nature of their functions, they are mainly provincial institutions, their chief duties being intimately connected with the matter of probate, which lies within the sole jurisdiction of the provinces.

## 2.—Assets and Liabilities of Loan Companies Chartered by or Supervised by the Federal Government, as at Dec. 31, 1938-47

NOTE.—For the years 1914-24, see p. 913 of the 1937 Year Book. Figures comparable to those shown below for the years 1925-37 are given at p. 985 of the 1946 edition. The figures appearing here include loan companies chartered by the Government of Nova Scotia, but inspected by the Federal Department of Insurance. Figures given in this table do not include small loans companies (see Sect. 2, pp. 1087-1088).

### Section 2.—Licensed Small Loans Companies and Licensed Money-Lenders

Four companies have been incorporated by the Parliament of Canada that make small loans, usually not exceeding \$500 each, on the promissory notes of the borrowers and additionally secured in most cases by endorsements or chattel mortgages. While these companies, under their original charter powers, were permitted to make loans on the security of real estate, that power was withdrawn by the Small Loans Act, 1939.

On Jan. 1, 1940, the Small Loans Act, 1939 (3 Geo. VI, c. 23), came into force, by which the above-mentioned small loans companies and money-lenders licensed thereunder, making personal loans of \$500 or less, are limited to a rate of cost of loan not in excess of 2 p.c. per month on outstanding balances, and unlicensed lenders to a rate of 12 p.c. per annum, including interest and charges of every description.

#### 5.—Assets and Liabilities of Small Loans Companies Chartered by the Federal Government, as at Dec. 31, 1938-47

NOTE.—Figures for the years 1928-32 will be found at p. 833 of the 1942 Year Book and for the years 1933-37 at p. 988 of the 1946 edition.

<sup>1</sup> First year Small Loans Act in operation. <sup>2</sup> Not including balances other than small loans.  
<sup>3</sup> Includes \$200,000 bonds, debentures and stock. <sup>4</sup> Includes \$250,000 bonds. <sup>5</sup> Includes \$250,000 bonds and \$1,534,756 balances of loans made in amounts greater than \$500. <sup>6</sup> Includes \$4,046,210 balances of loans in amounts greater than \$500. <sup>7</sup> Includes \$6,762,669 balances of loans in amounts greater than \$500. <sup>8</sup> Includes taxes. <sup>9</sup> No unearned income, since from 1940 small loans have been on an earned basis. <sup>10</sup> Includes business other than small loans. <sup>11</sup> Includes \$5,515 premium on capital stock.

The small loans companies chartered by the Federal Government show a substantial increase in business for 1947 as compared with the previous year. The number of loans made to the public during the year increased from 245,887 to 294,602 or by 20 p.c. and the amount of such loans rose from \$40,188,730 to \$50,761,348. The average loan was approximately \$172 compared with \$163 in 1946. At the end of 1947, the loans outstanding were 190,068 to an amount of \$24,425,311 or an average of \$129 per loan.

**Licensed Money-Lenders.**—In addition to the above-mentioned small loans companies, 55 licensed money-lenders furnished annual statements of their business, showing, for 1947, total assets of \$28,111,238, of which balances of small loans amounted to \$12,411,187, other balances to \$12,747,649, bonds, debentures and stocks to \$284,239, real estate to \$44,381, cash to \$1,094,356, and other assets to \$1,529,426. Liabilities amounted to \$28,111,238, of which borrowed money accounted for \$21,383,989 and paid shares and partnership capital for \$3,796,091. Loans made in 1947 numbered 128,286, totalling \$23,282,833 and averaging almost \$181, an increase of 21 p.c. in number and 28 p.c. in the gross amount; at the end of the year there were 92,304 loans outstanding with a total of \$12,411,187 averaging \$134. About 39 p.c. of the loans made in 1947 were between \$100 and \$200. Further details of this type of business are given in the 1947 report "Small Loans Companies and Money-Lenders Licensed under The Small Loans Act, 1939" published by the Federal Department of Insurance.

### Section 3.—The Underwriting and Distribution of Investments: their Influence on the Capital Market\*

**Introduction.**—This Section deals, in general, with the development of the capital market in Canada and, in particular, with that phase having to do with government, municipal and corporation securities which are or may be publicly dealt in or traded. Such government, municipal and corporation securities are

\* Prepared in co-operation with the Investment Dealers Association of Canada.

referred to in this Section as public investments as contrasted with private investments, viz., those securities held privately by individuals or corporations in most cases as a means of company control and which are not generally recognized as securities available for public trading.

The growth of the Canadian capital market has been one of gradual evolution. Prior to 1900 there was no such thing as a domestic capital market in Canada. The development of the country in its earlier years was dependent almost entirely on foreign capital, chiefly from the United Kingdom. The popular investments for Canadians, apart from the individual's own business, were something of a tangible nature like real estate or a mortgage secured by real estate, or a deposit in some financial institution. It required the expansion of government activities as well as the growth of joint-stock companies to initiate the development of a domestic capital market. While no figure is available of the total amount of invested capital in Canada at the beginning of the century, it has been privately estimated that the amount of foreign capital investment in Canada, at that time, was about \$1,200,000,000 made up of government, municipal and railway and public utility bonds and the shares of a limited number of companies such as the Canadian Pacific Railway and some lending and banking institutions.

The period from 1900 to 1913 was one of very rapid development in Canada and foreign capital poured in to a total of approximately \$2,500,000,000 during these years, more than one-half of it from the United Kingdom. London was then the capital market of the world and British investment houses had acquired long experience with foreign borrowers. True, there existed in Canada a number of investment houses, principally brokerage houses, members of the Toronto Stock Exchange founded in 1852 or the Montreal Stock Exchange founded in 1863, but the activities of these brokers were mainly concerned with trading in the listed securities of relatively few companies. These were principally loan companies and certain utility companies such as the Consumers Gas Company of Toronto, but their function did not extend to the seeking of new capital. Although in the 1890's Canadian stock-brokers and investment dealers underwrote the new security issues of a few Canadian companies, the underwriting of securities for government and corporate purposes on any large scale by Canadian brokers or investment dealers remained, for the most part, in the future.

As already stated, prior to the First World War Canadian savings were relatively small in volume and were invested chiefly in real estate and mortgages or left on deposit with banks. In turn these bank deposits were used mostly to make commercial loans, only a small proportion being invested in securities largely because there were few Canadian securities outstanding or available. With the outbreak of war in 1914, Canada was automatically shut off from the British market and turned to New York to finance war requirements. By 1916, 65 p.c. of all Canadian new-issue flotations were being placed in the United States. When the United States entered the War in 1917, this market was also closed to Canada. The necessity of being forced to rely on Canadian resources, plus the Government's decision to organize and conduct Victory Loan campaigns, proved to be a tremendous stimulus to the development of the domestic bond market. Bond sales had, up to this time, been confined to financial institutions and to wealthy individuals. However, the great increase in production and income (and thus in the capacity to save) which took place in Canada prior to and during the War made possible the success of the first Victory Loans. Victory Loan campaigns were organized to make Canadians

'bond conscious' and to persuade them to lend their savings to the nation. These campaigns, aided by the high interest rates (5 p.c. and  $5\frac{1}{2}$  p.c.) brought remarkable success. In 1915, 24,862 persons subscribed for \$78,729,000 of the first domestic War Loan issue. In the campaign of October, 1918, over 1,000,000 persons subscribed more than \$695,000,000.

Following the First World War, the investment boom of the 1920's in Canada was financed to a much greater extent out of Canadian savings than had been the case in any earlier period. Although investments of non-resident capital continued to be important there was a growing volume of Canadian capital available for investment. Much of this capital was invested in Canadian bonds, the sale of which in Canada rose substantially. Part of this Canadian capital was invested in foreign securities. Both Canadian individuals and institutions participated in this form of investment and in certain periods during the decade there were even net outward movements of capital from Canada. But the period from 1920 to 1930 as a whole was still one of predominantly inward movements of capital to Canada. An indication of the contribution of foreign capital to Canadian development in the decade is afforded by the value of non-resident investments in Canada in 1930 which reached an all-time peak of \$7,614,000,000 according to Dominion Bureau of Statistics data. This total was about \$3,000,000,000 higher than the value of non-resident investments in Canada at the end of 1919, which has been estimated at \$4,637,000,000. Almost all this growth in non-resident capital was in investments owned in the United States. Particularly important were developments financed by United States capital such as hydro-electric power, the pulp and paper industry, the automobile industry, and other industries being directly developed by United States companies. While statistics on the total value of all investments in Canada during the decade are not complete, available data covering part of the period indicate that capital of Canadian origin was very substantial in the decade as a whole.

The steady development of the Canadian capital market was seriously interrupted only from 1932 to 1934. From then until 1939 a continual flow of new bond and share financing was undertaken, much of which was of a reorganization and refinancing nature. With the outbreak of the Second World War it was obvious that Canada's financing of its war requirements must of necessity be done at home. The years 1939-45 witnessed the sharpest increase in the amount of Canadian Government financing in the history of Canada.

An important aspect of the expansion in Canadian investments in public securities has been the growing volume of Canadian bonds which are owned by residents of Canada. This is illustrated by the changes in the distribution of holdings of Canadian bonds between 1936 and 1947, shown in Tables 7 and 8. The par value of Canadian holdings rose during the decade from \$6,690,000,000 in 1936 to \$18,678,000,000 in 1947. In 1936, 66 p.c. of the total funded debt of Canadian governments and corporations was estimated as owned in Canada. In 1947 the corresponding proportion had expanded to about 87 p.c., chiefly because of the great expansion in issues of the Canadian Government arising out of the sale of Victory Loans in Canada during the recent war. The treatment of "Canada's International Investment Position" at pp. 390-394 gives a summary of non-resident investments in Canada, and British and foreign capital investments to which reference should be made.

The Bank of Canada now publishes an annual series of net new stock issues (i.e., new issues combined with retirements) in its Annual Report.

**Security Distribution.**—The substantial growth in the public investment market is, therefore, apparent. Some statistical evidence is also available to indicate that in this growth, wide distribution of security holdings has taken place. The outlets for this public investment capital have not been confined to any one type of investor as there has been a consistent increase in the holdings of this capital by both institutional and private investors. Table 6 illustrates in part the nature of this distribution.

<b>TOTALS.....</b>		<b>10,100</b>	<b>12,251</b>	

In addition to the sales of Victory Loans in the Second World War, War Savings Certificates were issued to a total amount of about \$389,000,000 and Canada Savings Bonds to the amount of \$1,083,000,000 were sold to the public.

Although complete statistics of preferred and common stock holdings are not available, an examination of the shareholders' lists of a number of the older and more prominent Canadian companies seems to indicate a wider distribution among shareholders at the present time as compared to the earlier period. For instance, there were 55,371 shareholders of the chartered banks in 1949—in 1930 there were 46,712. In the case of the Bell Telephone Company there were 52,500 shareholders in 1949—nearly double the number in 1945—while in 1935 Bell Telephone had approximately only 20,000 shareholders.

**Channels of Distribution.**—A wide variety of organizations and institutions has developed which provide the channels of distribution for publicly traded bonds and stocks. The chartered banks, the insurance, trust and loan companies, the stock-brokers and the investment dealers have all played their part in the development of the capital market, although the functions of these differ widely. The chartered bank's function is primarily one of making commercial loans; insurance, trust and loan companies have their particular functions, but all are substantial holders of securities and as such have played an important part in developing the public capital investment market. The stock-broker's function is essentially one of trading outstanding securities for a widening clientele. The function of the investment dealer is to:—

- (a) procure new capital as required for government and industry;
- (b) carry on day-to-day trading of all types of publicly held securities, in which function he acts as a principal as contrasted to the stock-broker who operates on an agency basis.

Each of these various categories has its own organization. Throughout all the spirited growth of the capital market the investment dealer gradually developed his retail business. While, at first, he confined his activities largely to government and municipal bonds, with the expansion in business he was able to extend his operations to include the underwriting of new issues on behalf of governments, municipalities and companies engaged in public utility operations, manufacturing and transportation. It was the investment dealer to whom the Government turned during the First World War and again during the Second World War to provide the nucleus for the development of the broad and expansive organization required at those times to float the large volume of Canadian Government bonds then issued.

As conditions throughout Canada vary, there exist a number of local and, in some cases, provincial organizations of brokers or dealers which, while serving the particular purposes for which they were formed, distribute both new issues and outstanding securities. There is only one national organization of investment dealers, formed in 1916 as the Bond Dealers Association of Canada. Renamed in 1935 the Investment Dealers Association of Canada, this organization has, as its chief objective, the general welfare of investment dealers and investors interested in government, municipal and corporation securities, as well as providing mutual protection, both to the dealer and the investor, against any irregular or illegal activities that may affect either. Membership in the Association is confined to

established firms of good reputation in the financial business. These firms must conform to certain regulations or by-laws relating to annual audits, and submission of statements on certain phases of their operation for the protection of investors. While it is national in scope, the better to accomplish its purposes on a sectional basis, regional committees have been formed which are responsible to the Association as a whole.

### 7.—Estimated Distribution of Ownership of Funded Debt of Canadian Governments and Corporations at Dec. 31, 1936

(Millions of Dollars)

Item	Amounts Outstanding	Distribution of Ownership			
		Canada	United Kingdom	United States	Other Countries <sup>1</sup>
Funded Debt—					
Dominions—direct and indirect, excluding railways.....	3,413	2,607	319	487	—
Provincials—direct and indirect, excluding railways.....	1,846	1,327	68	448	3
Municipals.....	1,467	1,103	133	226	—
Totals, Government Bonds.....	6,726	5,037	525	1,161	3
Steam railways <sup>2</sup> .....	1,840	673	740	427	—
Other corporations <sup>2</sup> .....	1,597	980	134	469	14
<b>Totals, Funded Debt.....</b>	<b>10,163</b>	<b>6,690</b>	<b>1,399</b>	<b>2,057</b>	<b>17</b>

<sup>1</sup> Some bonds sold through London and credited to the United Kingdom were doubtless taken in other European countries. No information is available as to the amounts but these represent only a small percentage. <sup>2</sup> The amounts for corporations and for railways include the bonded indebtedness of direct investments as follows: United Kingdom \$53,700,000, United States \$288,500,000 and other countries \$9,900,000.

### 8.—Estimated Distribution of Ownership of Funded Debt of Canadian Governments and Corporations at Dec. 31, 1947

(Millions of Dollars)

Item	Amounts Outstanding <sup>1</sup>	Distribution of Ownership			
		Canada	United Kingdom	United States	Other Countries <sup>2</sup>
Funded Debt—					
Dominions—direct and indirect, excluding railways.....	16,197	15,484	—	665	48

<sup>1</sup> Includes refundable taxes of 70, 155, 219, 70, 27 and 85 in the years 1943 to 1948, respectively.<sup>2</sup> Treasury bills, deposit certificates, treasury notes and other short-term issues sold directly to banks.<sup>3</sup> At selling and retirement values rather than par.<sup>4</sup> Before giving effect to the issue of Quebec Hydro bonds and the retirement of Montreal Light, Heat and Power stock, each in the amount of \$112,000,000.<sup>5</sup> Before giving effect to the issue of \$63,000,000 of provincially guaranteed Quebec Municipal Commission bonds and the transfer to the Commission of the debt of certain school corporations.

## 10.—Sales of Canadian Bonds, by Class of Bond and Country of Sale, 1938-47

NOTE.—Figures for the years 1904-25, inclusive, are given at p. 921 of the 1933 Year Book and for 1927-37 at pp. 990-991 of the 1946 edition. Since 1936 much of the borrowing for the Canadian National Railways has been done directly by the Federal Government which since the War has advanced money to both the Canadian National and Canadian Pacific Railways for the purchase of equipment. For this reason such small bond issues as have been made by the Canadian Pacific Railway are included under "Corporation".

Year	CLASS OF BOND

Subsection 2. Historical and Operational Statistics of Life Insurance Companies Registered by the Federal Government	1105		

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Insurance, for the purpose of statistical analysis, is usually classified as fire, life and casualty. Most companies operate under Federal Government (Dominion) registration although some have provincial licences only. Many fraternal orders and societies, too, are engaged in this kind of business. An extended treatment of the salient features of the legislation covering insurance in general and the fields of federal and provincial jurisdiction will be found in the 1941 Year Book at pp. 844-846. The 1942 Year Book, at pp. 842-846, contains a special article on the developments in fire and casualty insurance in Canada between 1931 and 1940, consequent upon the enactment of the three Insurance Acts of 1932, while an article on insurance as it affects the balance of international payments appears at pp. 870-871 of the same edition. The 1947 Year Book, at pp. 1064-1074, includes an article on insurance in Canada during the depression and war periods.

## Section 1.—Fire Insurance

In Canada, fire insurance began with the establishment of agencies by British fire insurance companies. These were situated usually at the seaports and operated by local merchants. The oldest existing agency of such a company commenced business at Montreal in 1804. The first Canadian company dates from 1809 and the first United States company to operate in Canada commenced business in 1821. A short account of the inception of fire insurance in Canada is given at pp. 846-847 of the 1941 Year Book.

The report of the Superintendent of Insurance for the year ended Dec. 31, 1947, shows that at that date there were 268 fire insurance companies under Dominion registration; of these, 59 were Canadian, 73 were British, and 136 were foreign companies. In 1875, the first year for which authentic records were collected by the Department of Insurance, 27 companies operated in Canada—11 Canadian, 13 British and 3 United States. The proportionate increase in the number of British and foreign companies from 59 p.c. to 78 p.c. of the total number is a very marked point of difference between the fire and life insurance businesses in Canada, the latter being carried on very largely by Canadian companies.

\* Material in this Chapter, except where otherwise indicated, has been revised under the direction of R. W. Warwick, Superintendent of Insurance, Department of Insurance, Ottawa.

### Subsection 1.—Grand Total of Fire Insurance in Canada

Of the total amount of insurance effected in Canada during each year, a part is sold by the companies holding provincial licences and permits. Such companies generally confine their operations to the province of incorporation, but may be allowed to sell insurance in other provinces.

In the more detailed analyses of fire insurance given in Table 2, the statistics cover only the operations of companies with Dominion registration; as shown in Table 1, such companies account for approximately 90 p.c. of the insurance in force.

1.—Fire Insurance in Canada, 1947

### Subsection 2.—Operational Statistics of Fire Insurance Companies Registered by the Federal Government

The trend in the average rate payable for fire insurance has been generally downward, although the increases in fire losses in the years from 1941 to 1946 have had the effect of checking that tendency. The increase in value of insurable buildings and their contents tends to increase fire insurance premiums in spite of the trend of the average rate.

## 2.—Fire Insurance, by Companies Operating under Dominion Registration, Decennially 1880-1940 and 1941-48

NOTE.—Figures for the years 1889-99 are given at p. 973 of the 1939 Year Book, and figures for 1901-39 at p. 847 of the 1942 edition.

Year	Amount in Force at End of Year	Net Premiums Received During Year	Claims Paid During Year	Percent- age of Claims to Pre- miums	Gross Amount of Risks Taken During Year	Premiums Charged Thereon	Average Cost per \$100 of Insurance

<sup>1</sup> Yukon, Northwest Territories and also certain 'floater business' that cannot be apportioned to any one province.

**Classification of Fire Risks.**—For some years the Department of Insurance has compiled, from information supplied by the fire insurance companies registered to transact business in Canada, tables of experience as to premiums and claims by 27 classes of risks agreed upon on the basis of net premiums written, less registered or licensed reinsurance. This experience for the five years 1940-44 is given at p. 1077 of the 1947 Year Book. For 1945 and 1946 the returns were received on a 'direct written' basis, excluding all reinsurance ceded or assumed, and the classification was changed and reduced to 21 classes. The 1946 and 1947 experience is given in Table 4.

**Subsection 3.—Finances of Fire Insurance Companies**

Tables 5 to 7 show for recent years the assets, liabilities, income and expenditure of registered companies transacting fire insurance in Canada. The majority of fire insurance companies also transact casualty insurance dealt with in Section 3 of this Chapter. Owing to the fact that it is impossible for such companies to allocate their assets and liabilities and their general income and expenditure among the various types of business transacted, totals only are given here. Table 28, p. 1119, gives similar information for registered companies whose transactions are confined to casualty insurance.

<sup>1</sup> Available for the first time in 1946.<sup>2</sup> See footnote to Table 8, p. 1102.

The property losses by provinces given in Table 9 are the total fire losses insured and uninsured. The percentages of the provincial total uninsured were as follows: Prince Edward Island, 44; Nova Scotia, 34; New Brunswick, 46; Quebec, 20; Ontario, 17; Manitoba, 11; Saskatchewan, 26; Alberta, 8; British Columbia, 61; and Yukon and Northwest Territories, 86. Uninsured losses formed 27 p.c. of total losses for Canada.

Section 2.—Life Insurance

Life insurance in force in Canada, in companies registered by the Dominion, was over \$13,105,000,000 in 1948, an increase of more than \$1,205,000,000 over the figure for 1947. There has been not only an increase in new business, but also a greater stability in business written compared with the depression in early war years. The effect of these factors is reflected in the ratio of gain in business in force expressed as a percentage of the amount in force at the beginning of the same year.

Year	Net in Force at Beginning of Year	Gain in Force for the Year	Per- centage Gain
	\$	\$	
1930.....	6,157,000,000	335,000,000	5.4
1935.....	6,221,000,000	38,000,000	0.6
1939.....	6,630,000,000	146,000,000	2.2
1940.....	6,776,000,000	199,000,000	2.9
1941.....	6,975,000,000	374,000,000	5.4
1942.....	7,349,000,000	527,000,000	7.2
1943.....	7,876,000,000 <sup>1</sup>	658,000,000	8.4
1944.....	8,534,000,000	605,000,000	7.1
1945.....	9,139,000,000	612,000,000	6.7

1947.....	10,812,000,000	1,088,000,000	10.1
1948.....	11,900,000,000	1,205,000,000	10.1

<sup>1</sup> Excluding \$44,000,000 adjustment arising out of method of reporting juvenile insurance.

Subsection 1.—Grand Total of Life Insurance in Canada

In addition to the business transacted by life insurance companies registered by the Federal Government, a considerable volume of business is also transacted by companies licensed by the provinces. Statistics of these provincial companies have been collected since 1915 by the Department of Insurance. Table 12 summarizes the volume of business transacted by Canadian, British and foreign life insurance companies and fraternal societies, whether registered by the Federal Government or licensed by the provinces.

### Subsection 2.—Historical and Operational Statistics of Life Insurance Companies Registered by the Federal Government

The net life insurance in force of all companies with Dominion registration was only \$35,680,082 in 1869, while in 1948 it was \$13,105,352,888.\* The amount per head of the estimated population of Canada has more than doubled since 1926—evidence of the general recognition of the value of life insurance for the adequate protection of dependants against misfortune. Notable also is the fact that in this field British companies, the leaders in 1869, have fallen far behind Canadian and foreign companies.

\* This total does not include fraternal insurance.

### 13.—Life Insurance in Force and Effected in Canada by Companies operating under Dominion Registration (Fraternal Insurance Excluded)<sup>1</sup>, 1880-1948

NOTE.—Figures for the years 1880-99 are given at p. 958 of the 1938 Year Book, and figures for the years 1901-39 at p. 855 of the 1942 edition.

Year	Net Amounts in Force				Insurance in Force per Head of Estimated Population <sup>2</sup>	Net Amount of New Insurance Effected during Year

<sup>1</sup> For statistics of fraternal insurance, see pp. 1111-1113.  
at p. 155.

<sup>2</sup> 1948 figures are subject to revision.

<sup>2</sup> Based on estimates of population given at p. 155.

Life insurance business was transacted in Canada during 1947 by 48 active companies with Dominion registration, including 29 Canadian, 4 British and 15 foreign companies; one of these foreign companies was registered only for the acceptance of reinsurance. In addition to these active companies, there were 8 British and 4 foreign companies writing little or no new insurance, this business being confined largely to the policies already on their books.

The operations analysed in the tables of this Subsection, with the exception of Table 17, cover only those companies with Dominion registration and are exclusive of fraternal organizations and provincial licensees. However, as indicated in Table 12, their operations cover about 94 p.c. of the life insurance in force in Canada.

## Subsection 3.—Finances of Life Insurance Companies

The financial statistics of the following tables cover only life insurance companies with Dominion registration and do not include fraternal organizations and provincial licensees. In the cases of British and foreign companies, the figures apply only to their assets, liabilities and operations in Canada but, in the case of Canadian companies, assets and liabilities, income and expenditure, arise in part from business abroad.

## 18.—Assets of Canadian Life Companies with Dominion Registration and Assets in Canada of British and Foreign Life Companies, 1943-47

NOTE.—One British company transacting fire insurance in Canada transacts also life insurance in Canada and, inasmuch as a separation of assets has not been made between these two classes, the assets in Canada are not included here, but are included in the assets of British companies shown in Table 5, p. 1100.

<sup>1</sup> A detailed classification of assets showing investments of Canadian companies and giving the percentage of the total in each group and sub-group for 1945, 1946 and 1947 will be found at p. xvi of the Report of the Superintendent of Insurance, Vol. II, for the year ended Dec. 31, 1947. <sup>2</sup> Book values. The totals carried into the balance sheets before 1945 included some market (or authorized) values of these assets; these totals were \$2,921,471,387 in 1943 and \$3,140,001,113 in 1944. After 1944, book values were in all cases carried into the balance sheet, any excess of book over market values being covered by a reserve in the liabilities. <sup>3</sup> None reported.

**Subsection 4.—Life Insurance Effected through Fraternal Benefit Societies**

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 21 gives statistics of life insurance effected with fraternal benefit societies by Canadian members, together with statistics of assets, liabilities, income and expenditure relating to the whole business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries, London; of the Faculty of Actuaries in Scotland; of the Actuarial Society of America; or of the American Institute of Actuaries) and, unless the actuary certifies to the solvency of each fund, a readjustment of rates or benefits must be made. The statistics in the first part of this table relate to the 16 Canadian societies reporting to the Insurance Department of the Federal Government, only one of which does not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain authority from the Federal Government prior to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, while forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies and some foreign societies that had not previously been licensed by the provinces have since obtained federal authority to transact business. Of both classes of societies, 30 transacted business in Canada during 1947, two of which do not grant life insurance benefits.

**Subsection 5.—Life Insurance in Force Outside Canada by Canadian Companies Registered by the Federal Government**

Tables 22 and 23 give summary statistics of insurance in force as at Dec. 31, 1947, in currencies other than Canadian, classified by companies and by the currencies in which business was written. The data given here are in Canadian dollars, mainly at par rates of exchange for the countries concerned, but there are several exceptions where, for purposes of account, certain companies have converted foreign currencies at rates other than par, particularly where the current rate differs substantially from the par rate. More than 62 p.c. of all such business in force was written in United States currency and over 22 p.c. in sterling. From another standpoint, over 32 p.c. was written in currency of British countries outside Canada, and over 67 p.c. in currencies of foreign countries.

Canadian life companies operating under Dominion registration had in force in countries outside Canada, at Dec. 31, 1947, life insurance amounting to \$4,530,325,046, and sinking fund and capital redemption insurance amounting to \$5,604,788. As shown in Table 22, insurance in force in currencies other than Canadian amounted to \$4,383,881,945. The difference between these figures is presumably the net amount of non-Canadian business transacted in Canadian currency. As against the total non-Canadian business, including annuity business, the British and foreign investments of Canadian life insurance companies as at Dec. 31, 1947, amounted to \$1,505,806,937. Since the business in force in Canada of these companies at Dec. 31, 1947, amounted to \$7,965,680,157 (including sinking fund of \$1,494,866), the total business on their books, Canadian and non-Canadian, amounted to \$12,501,609,991. Thus, over 36 p.c. of the total business in force was outside Canada.

**22.—Life Insurance Effectuated and in Force and Liabilities of Canadian Companies (Excluding Fraternal Societies) operating under Dominion Registration, in Currencies other than Canadian, by Companies, 1917.**

NOTE.—Figures are given in Canadian dollars, mainly at par rates of exchange.

**Subsection 6.—Grand Total of All Life Insurance in Canada and the Business of Canadian Organizations Abroad**

Table 24 summarizes the business outside Canada of Canadian life companies and fraternal benefit societies. If to these figures is added the business in Canada of these organizations, as shown in Table 12, the total business, internal and external, of all Canadian life insurance companies and fraternal societies may be obtained. Again, adding the business in Canada of British and foreign companies and fraternal societies, a grand total is obtained of all life insurance in Canada and of the life insurance business abroad of Canadian organizations; this total is shown in Table 25.

**24.—Business Abroad of Canadian Life Companies and Fraternal Societies, 1947**

NOTE.—Figures for business in Canada will be found in Table 12, p. 1105.

**Section 3.—Casualty Insurance**

Since 1875, the growth of casualty insurance business has been steady. The report of the Superintendent of Insurance for the calendar year 1880 shows that the number of companies licensed for the transaction of accident, guarantee, plate glass and steam-boiler insurance—the only four classes of casualty insurance then transacted—was 5, 3, 1 and 1, respectively. The report for the year 1947 shows that casualty insurance in Canada now includes various forms of accident and 23 other classes of insurance transacted by companies with Dominion registration. In 1880, 10 companies transacted casualty insurance, but in 1947 such insurance was issued by 259 companies, of which 55 were Canadian, 70 British and 134 foreign; of these, 199 companies also transacted fire insurance. In addition, 21 fraternal orders or societies carried on accident and sickness insurance as well as life insurance business and 3 fraternal orders or societies carried on accident or sickness insurance only.

Table 27, which shows the division of business in this field between federal and provincial licensees, indicates that, as in the cases of fire and life insurance, the bulk of the business (about 90 p.c. in this case) is transacted by companies with Dominion registration.

Since, as indicated above, most of the companies carrying on casualty insurance in Canada also transact fire insurance, their assets, liabilities, income and expenditures are included in the financial statistics of fire insurance companies given in Section 1, Subsection 3, of this Chapter. Table 28 gives similar figures for the total casualty business of Canadian companies, and for the casualty business in Canada of British

and foreign companies, whose transactions are confined to insurance other than fire and life. In 1947, there were 11 Canadian, 6 British and 53 foreign companies whose operations were limited to the same field.

During the war years, automobile insurance showed a favourable experience with a loss ratio of around 45 p.c. This ratio was slightly lower than for the pre-war years, the result of lessened traffic, but since the end of hostilities the experience tends to be less favourable and now stands around 52 p.c.

Hail insurance in 1946 showed a loss ratio of 25 p.c. but in 1947 this had increased to 67 p.c.

Marine insurance showed a very large increase in Canada during the war years and substantial profits resulted. The results for the years 1941 to 1947, inclusive, were as follows:—

Year	Premiums	Claims Incurred	Under-writing Profits
	\$	\$	\$
1941.....	6,011,922	2,781,190	1,694,470
1942.....	14,295,543	7,983,963	3,855,415
1943.....	10,061,059	4,931,286	3,449,873
1944.....	6,754,361	2,172,418	3,243,889
1945.....	5,978,274	2,995,704	1,704,367
1946.....	5,655,392	2,232,701	2,084,412
1947.....	7,932,404	4,529,161	1,031,313

This class of insurance will, no doubt, figure more largely in the business of companies in post-war years than it did before 1939.

### Section 4.—Government Insurance

In addition to the insurance provided by private insurance companies various types of government insurance schemes have been adopted in recent years by the Federal and Provincial Governments. This Section deals briefly with the principal schemes now in effect.

Only those schemes dealing with the types of insurance covered by this Chapter, viz., fire, life and casualty are treated here. Information on unemployment insurance, health insurance, export credits insurance, etc., will be found in the Chapters on Labour, Health and Welfare, Foreign Trade, etc.

**Veterans Insurance.\***—The Veterans Insurance Act which came into force on Feb. 20, 1945, is a Federal Government Statute which provides that veterans who were engaged in service during the Second World War, the widows and widowers of veterans, disability pensioners under the Pension Act in receipt of pensions relating to the War, most members of the Active Forces, and certain merchant seamen, may contract with the Government of Canada for life insurance, usually without medical examination. The period of eligibility ends six years after the coming into force of the Act or six years after discharge from Service, whichever is later. For the Active Forces generally it will end on Apr. 1, 1952, and for the eligible merchant seamen it will end on Feb. 20, 1951.

The amount of insurance may be any multiple of \$500 up to a maximum of \$10,000. The plans of insurance available are 10-payment life, 15-payment life, 20-payment life, and life with premiums payable until age 65 or age 85. The policies are non-participating.

Premiums on veterans insurance may be paid monthly, quarterly, semi-annually or annually. They may be paid in cash or from re-establishment credit or by deduction from any pension granted under the Pension Act. The policy contracts include a waiver-of-premium disability provision. No extra premiums are charged for residence, travel or occupational hazards.

At the end of the second policy year a liberal cash value is available. It may be used alternatively to provide reduced paid-up insurance or extended term insurance. A veteran's insurance policy is not assignable, nor is a loan value granted.

The maximum amount of insurance money that will be paid in a lump sum at death is \$1,000; the balance must be paid to the beneficiary as an annuity certain or as a life annuity with or without a guaranteed period.

\* Revised by C. F. Black, Superintendent, Veterans Insurance, Department of Veterans Affairs, Ottawa.

#### 29.—Summary Statistics of Veterans Insurance, Years Ended Mar. 31, 1946-49

Year Ended Mar. 31—	Insurance Issued During Year		Insurance in Force at End of Year		Death Claims Approved During Year	
	No.	\$	No.	\$	No.	\$
1946.....	4,013	11,971,500	3,914	11,708,550	1	500
1947.....	6,442	18,783,000	10,077	29,658,000	17	55,500
1948.....	8,825	24,599,000	18,433	52,594,612	38	100,500
1949.....	4,615	14,074,500	22,293	63,836,743	91	245,500

**Provincial Insurance Schemes.**—The Province of Saskatchewan conducts fire, fidelity and surety insurance but not life insurance. This is done under the terms of the Saskatchewan Government Insurance Act, 1944.

In the Province of Alberta, life insurance is provided through the Life Insurance Company of Alberta, a Crown Company that is not an emanation from the Provincial Government. Similarly, another Crown Company, the Alberta General Insurance Company, provides all other kinds of insurance except life, accident and sickness. The Alberta Hail Board provides farmers with insurance for their crops against damage by hail.

Since the insurance statistics presented in this Chapter are limited to those of companies registered with the Federal Government to do business all over Canada and details of the business of provincial companies are not covered except for the inclusion of total figures in the summary Tables 1 and 12, the same principle is followed in this Section and for detailed information the reader is referred to:—

- (a) The Superintendent of Insurance,  
Insurance Branch,  
Department of the Provincial Secretary for Saskatchewan,  
Regina, Saskatchewan.
- (b) The Superintendent of Insurance,  
Department of the Provincial Secretary for Alberta,  
Edmonton, Alberta.

## CHAPTER XXVII.—DEFENCE OF CANADA\*

Subsection 2. The Canadian Army.....	1129	SECTION 4. THE INDUSTRIAL DEFENCE BOARD.....	1135

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

### Section 1.—The Department of National Defence

In 1948-49 the strength of all three branches of the Armed Forces was substantially increased toward their peacetime establishments, and the program of organizing and training extensive reserve forces was continued.

Under a single Minister, charged with responsibility for all matters relating to defence, the Department continued a policy which included: (1) the adoption of a unified defence program to meet agreed strategic needs; (2) a single defence budget under which funds and resources would be allocated in accordance with the program; (3) the elimination of duplication of services; (4) consistent and equitable personnel policies; (5) greater emphasis on defence research and closer co-ordination with other government departments and with war industry.

Under direction of the Minister, Service command is exercised by the heads of the Services concerned.

In 1948-49 progress of the new defence organization was primarily along administrative lines, in keeping with an ever-changing international situation. Co-operation with other nations in matters of defence became increasingly effective. In all matters of international defence relations the first aim of Canadian policy was to prevent war.

The amalgamation of the three Departments and the co-ordination of the three Services began with the establishment of a single National Defence Headquarters at Ottawa. Within this Headquarters, allied components of the Navy, Army and Air Force were interwoven wherever compatible with the interests of efficiency and economy.

Councils and committees that now function with direct relation to the Department of National Defence and the unification program include:—

- (1) **Defence Council.**—*Composition*—Minister of National Defence (Chairman), Parliamentary Assistant, Deputy Minister, Associate Deputy Ministers (two), Service Chiefs of Staff and Chairman of Defence Research Board. *Object*—advising the Minister with regard to administrative matters of inter-Service concern affecting the Department as a whole or otherwise.
- (2) **Chiefs of Staff Committee.**—*Composition*—Service Chiefs of Staff (three), Chairman of Defence Research Board and, when matters of general interest are under consideration, the Deputy Minister, the Under

\* This Chapter, with the exception of the material on the Industrial Defence Board, was revised under the direction of C. M. Drury, Deputy Minister, Department of National Defence, Ottawa.

Secretary of State for External Affairs and the Secretary to the Cabinet attend. *Object*—planning, training and general supervision of the three Services; preparation of joint reports appreciating the military situation.

- (3) **Personnel Members Committee.** — *Composition* — Adjutant-General (Army), Chief of Naval Personnel, Air Member for Personnel (R.C.A.F.), Associate Deputy Minister and a Defence Research Board representative (chairmanship rotates among first three members named). *Object* — joint administration of personnel, medical and dental services, pay, pensions and allied matters; general aim is to ensure that, where feasible, personnel of the Navy, Army and Air Force are governed by the same regulations.
- (4) **Principal Supply Officers' Committee.** — *Composition* — principal supply officers from each Service, a Defence Research Board representative and appropriate Associate Deputy Minister (chairmanship rotates among Service members). *Object* — co-ordination and unification of supply and equipment and matters of procurement.
- (5) **Inter-Service Recruiting Committee.** — *Composition* — by Service appointment as required (chairmanship rotates). *Object* — planning campaigns and sustaining recruiting programs for the active and reserve components of the Armed Forces.

**The Defence Research Board of Canada.** — The Defence Research Board was set up to operate as a specialized fourth Service to co-ordinate scientific research of defence significance (see Subsection 4).

**Civil Defence.** — In October, 1948, the Minister of National Defence appointed a Co-ordinator of Civil Defence with the task of preparing a Canadian plan. Informal discussions were held with the Provincial Governments and the various national organizations and the plans and organizations of the countries of Western Europe and the United States were studied.

An interdepartmental committee has been formed to assist in the co-ordination of the federal planning. The main principle is that all departments and agencies are responsible for planning all phases which are extensions of the normal functions.

At an early stage in his planning the Co-ordinator of Civil Defence became interested in the standardization of fire-fighting equipment and has been instrumental in initiating a standardization program in Canada.

### **Liaison Abroad**

For the purpose of liaison and furtherance of international co-operation on defence, Canada maintains: (1) United States-Canadian Permanent Joint Board on Defence; (2) Canadian Joint Staff (Washington) representing the three Services; (3) Canadian Joint Liaison Officers, London, representing the three Services; and (4) Service Attachés in various countries throughout the world.

## **Section 2.—The Armed Forces and the Defence Research Board**

The three Armed Services of Canada—the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force—are closely consolidated under single ministerial direction but still operate as three distinct defence Services. Each is headed by a Chief of Staff who is responsible to the Minister of National Defence. Many aspects of administration and training have been amalgamated or co-ordinated in the interests of efficiency and economy.

Terms of service for recruits in each of the Armed Services have been standardized as much as possible. The entire pay structure for comparable ranks has been made uniform. Plans are progressing for standardization of uniforms and equipment wherever feasible. Requirements for recruits and length of enlistment periods vary somewhat in accordance with the demands peculiar to each Service. Generally, educational and physical requirements are the same.

The strengths of the active (permanent) components of the Armed Forces as at Oct. 31, 1949, were: Navy 9,047; Army 19,878; and Air Force 15,941. Table 1 shows rates of pay for the Armed Forces and includes the increases made effective in October, 1948.

**1.—Monthly Rates of Pay and Allowances for Members of the Active Forces, as at Sept. 1, 1949<sup>1</sup>**

Rank or Rating			Basic Rate	Subsistence <sup>2</sup>	Total	After 3 Years in Rank <sup>3</sup>	After 6 Years in Rank <sup>3</sup>
Navy	Army	Air Force	\$	\$	\$	\$	\$

<sup>1</sup> Excluding (a) marriage allowances for men, \$30 per month, and for officers, \$40 per month, subject to reduction of \$10 per month for permanent married quarters or \$2.50 per month for temporary married quarters; (b) trade pay for Group 1 at \$4 per month, for Group 2 at \$12 per month, for Group 3 at \$20 per month, and for Group 4 at \$28 per month. <sup>2</sup> Granted when rations and quarters are not provided.

<sup>3</sup> Including subsistence allowance.

<sup>4</sup> Receives \$30 per month risk allowance when engaged in flying duties.

### Subsection 1.—The Royal Canadian Navy

**Administration.**—The administrative and operational headquarters of the Royal Canadian Navy is located at Naval Headquarters, Ottawa, Ont. The Chief of the Naval Staff is responsible for policy and direction in all matters

concerning the Royal Canadian Navy. He is advised by the Naval Board, consisting of four senior officers who are heads of the main branches of Naval activity—Staff, Personnel, Supply and Technical, and Air.

The Naval Staff, which deals with the organization and operation of the Royal Canadian Navy, is composed of the heads of the various Staff Directorates—Operations, Plans, Intelligence, Communications, Air, Weapons and Tactics.

The Navy maintains operational bases and training centres at Halifax, N.S., and Esquimalt, B.C. In command of all ships and establishments in these areas are the Flag Officer, Atlantic Coast, and the Flag Officer, Pacific Coast, respectively.

External representation includes the Naval Member of the Canadian Joint Staff, Washington, D.C., U.S.A., and Senior Canadian Naval Liaison Officer, London, England.

**The Fleet.**—On Feb. 25, 1947, the Minister of National Defence announced the constitution of the Royal Canadian Navy's peacetime fleet. Though reduced from the 378 warships served by more than 90,000 men in the spring of 1945, it represented a fleet far superior to anything previously maintained by Canada in peacetime. Designed as a balanced two-ocean organization, it was built for the first time in Canadian naval history around big ships, and made allowance for the increasing importance of air power.

The keynote of the following period has been that of intensive training, with particular emphasis on training afloat. Operational ships have put in a notable amount of sea time, from the summer local cruises, designed for the instruction of Reserves with only two weeks to spend on the water, to far-flung movements combined with fleet exercises, and on occasion, co-operation with ships of the Royal Navy and the United States Navy.

The largest unit of the new force is a light fleet aircraft carrier of 18,000 tons. Two 8,000-ton six-inch gun cruisers, seven large Tribal Class destroyers and four lighter destroyers make up the main portion of the fleet. Six frigates and nine Algerine Type minesweepers are also maintained, as well as four auxiliary vessels and four Fairmile motor launches. The following ships are currently in commission or are being retained in reserve:—

Light Fleet Aircraft Carrier—  
H.M.C.S. *Magnificent*

Cruisers—  
H.M.C.S. *Ontario*  
H.M.C.S. *Uganda*

Tribal Class Destroyers—  
H.M.C.S. *Iroquois*  
H.M.C.S. *Huron*  
H.M.C.S. *Haida*  
H.M.C.S. *Micmac*  
H.M.C.S. *Nootka*  
H.M.C.S. *Cayuga*  
H.M.C.S. *Athabaskan*

"V" Class Destroyers—  
H.M.C.S. *Sioux*  
H.M.C.S. *Algonquin*

Crescent Class Destroyers—  
H.M.C.S. *Crescent*  
H.M.C.S. *Crusader*

Frigates—  
H.M.C.S. *St. Stephen*  
H.M.C.S. *Antigonish*  
H.M.C.S. *Swansea*

Frigates—*concluded*

H.M.C.S. *La Hullose*  
H.M.C.S. *Beacon Hill*  
H.M.C.S. *New Waterford*

Algerine Type Minesweepers—  
H.M.C.S. *New Liskeard*  
H.M.C.S. *Portage*  
H.M.C.S. *Wallaceburg*  
H.M.C.S. *Fort Francis*  
H.M.C.S. *Kapuskasing*  
H.M.C.S. *Rockcliffe*  
H.M.C.S. *Oshawa*  
H.M.C.S. *Sault Ste. Marie*  
H.M.C.S. *Winnipeg*

Auxiliary Vessels—  
H.M.C.S. *Lloyd George*  
H.M.C.S. *Llewellyn*  
H.M.C.S. *Revelstoke*  
H.M.C.S. *Cedarwood*

Motor Launches—  
H.M.C. M. L. 116  
H.M.C. M. L. 121  
H.M.C. M. L. 106  
H.M.C. M. L. 124

The aircraft carrier, H.M.C.S. *Magnificent* is of the Colossus Class, with a flight deck 790 ft. long and a speed of 25 knots. Though Belfast-built she has a number of Canadian innovations, including a system of cafeteria messing for feeding a crew of more than 1,000. Sea Fury single-seater fighters and Firefly V anti-submarine two-seaters constitute her aircraft. The former are among the fastest propeller-driven aircraft in the world, while the Fireflies are specially equipped for anti-submarine duties. Royal Canadian Navy airmen are trained to wings standard by the Royal Canadian Air Force but deck landing and other advanced instruction are provided by the Navy.

H.M.C.S. *Shearwater*, commissioned in December, 1948, at Dartmouth, N.S., is the shore base for the 18th and 19th Carrier Air Groups, the Training Air Group, Fleet Requirement Unit and schools for Air Branch personnel. Formerly administered by the Royal Canadian Air Force, *Shearwater* was turned over to the Royal Canadian Navy just prior to commissioning.

The 8,000-ton cruisers, 500 ft. long, mount nine six-inch guns and heavy anti-aircraft armament. They carry crews of nearly 800 each and have a speed of more than 30 knots. H.M.C.S. *Ontario*, completed near the end of 1945, has since been completely refitted and is one of the best-equipped ships of her class.

The Tribals are of about 2,000 tons, and are the most heavily armed vessels of their type. Three of them, British-built, saw much action in the closing years of the War. These are, in order of completion, H.M.C.S. *Iroquois*, H.M.C.S. *Huron*, and H.M.C.S. *Haida*. The remaining four are products of Canadian shipbuilders and are the first turbine warships ever built in Canada.

H.M.C.S. *Crescent* and H.M.C.S. *Crusader* are smaller destroyers than the Tribals, displacing 1,700 tons. They are on loan from the Royal Navy.

H.M.C.S. *Algonquin* and H.M.C.S. *Sioux* are Canadian Fleet "V" class destroyers. They displace 1,700 tons and, while comparatively new ships, have battle records to their credit.

The frigates and Algerine minesweepers, war-developed as anti-submarine escort vessels, displace 1,445 and 1,000 tons, respectively.

The allocation of major units maintained in commission calls for an aircraft carrier and three destroyers on the Atlantic coast, based at Halifax, N.S., and a cruiser and three destroyers operating from the Pacific base at Esquimalt, B.C. Frigates and Algerines are commissioned with an eye on training requirements, the greater number being called for in the summer months, when the flow of Reserves, coming from Naval Divisions all across Canada for their annual sea time, reaches its peak.

In 1949, the Royal Canadian Navy embarked on the largest ship-building program in its peacetime history. Contracts were awarded for the construction of a modern icebreaker, three anti-submarine escort vessels of latest design, four coastal minesweepers and a trawler-type gate vessel.

**Training.**—While specialized training for both officers and men prior to the War was almost entirely dependent on Royal Navy facilities, the development and modernization of the Halifax and Esquimalt bases, plus the facilities made available by the increased Canadian fleet, have brought the Royal Canadian Navy to a position where, with the exception of a very few highly specialized qualifications, it handles all its own instructional activity.

H.M.C.S. *Cornwallis*, at Cornwallis, N.S., the largest training base in the British Commonwealth during the War, was recommissioned May 1, 1949, to handle the basic instruction of all Permanent Force new entries.

During the summer of 1949, the Permanent Force of the Royal Canadian Navy reached its interim authorized complement of 9,047 officers and men. Recruits, on enlistment, sign a five-year agreement, with succeeding periods of the same length where a man wishes to continue until he is pensionable.

Officers of the Royal Canadian Navy come from three main sources: (1) the Canadian Services College, Royal Roads, B.C., and the Canadian Services College, Royal Military College, Kingston, Ont.; (2) direct entry of certain specialists from the universities; (3) promotion from the ranks. In addition, a number of short term commissions are held by naval air crew personnel.

**Operations.**—While the fleet's primary peacetime role is the provision of sea training for officers and men of the Royal Canadian Navy and the R.C.N. (Reserve), a specially equipped frigate is currently engaged in weather patrol duties and other units carry out operational missions from time to time.

H.M.C.S. *St. Stephen*, based at Halifax, shares with ships of other nations the responsibility for providing weather reports and other navigational aids for transatlantic air traffic. This international weather reporting service the frigate carries out on "Station Baker", a point midway between Greenland and Labrador, in Davis Strait.

Another operational commitment during 1949 was a cruise to the Far East by the destroyer, H.M.C.S. *Crescent*. The *Crescent* was at Shanghai, Nanking and Hong Kong and stood by to evacuate Canadian civilians in the event of an emergency arising out of disturbed conditions in China.

H.M.C.S. *Cedarwood*, an auxiliary vessel based at Esquimalt, B.C., joined company with the U.S.S. *Epcos (R)-857*, an experimental sea-going laboratory, and the United States submarine, *Baya*, also a sea-going laboratory, for a two-week survey of oceanographic conditions off the Aleutian Islands early in September, 1949. H.M.C.S. *Cedarwood* also carried out oceanographic duties along the Pacific Coast at other periods during the year. On the Atlantic Coast, similar duties are a continuing commitment of the Algerine minesweeper, H.M.C.S. *New Liskeard*.

Two naval vessels are at present on loan to the Department of Mines and Technical Surveys and a third to the Department of Transport.

**Royal Canadian Navy (Reserve).**—All Canadian Naval Reserves are incorporated in a single body, the Royal Canadian Navy (Reserve). Twenty Naval Divisions are established in the following centres:—

Halifax, N.S., H.M.C.S. "Scotian"  
 Charlottetown, P.E.I.,  
     H.M.C.S. "Queen Charlotte"  
 Saint John, N.B., H.M.C.S. "Brunswick"  
 Quebec, Que., H.M.C.S. "Montcalm"  
 Montreal, Que., H.M.C.S. "Donnacona"  
 Ottawa, Ont., H.M.C.S. "Carleton"  
 Toronto, Ont., H.M.C.S. "York"  
 Kingston, Ont., H.M.C.S. "Cataraqui"  
 Hamilton, Ont., H.M.C.S. "Star"  
 Windsor, Ont., H.M.C.S. "Hunter"

London, Ont., H.M.C.S. "Prevost"  
 Port Arthur, Ont., H.M.C.S. "Griffon"  
 Winnipeg, Man., H.M.C.S. "Chippawa"  
 Regina, Sask., H.M.C.S. "Queen"  
 Saskatoon, Sask., H.M.C.S. "Unicorn"  
 Calgary, Alta., H.M.C.S. "Tecumseh"  
 Edmonton, Alta., H.M.C.S. "Nonsuch"  
 Vancouver, B.C., H.M.C.S. "Discovery"  
 Victoria, B.C., H.M.C.S. "Malahat"  
 Prince Rupert, B.C.,  
     H.M.C.S. "Chatham"

Plans were being completed in September, 1949, for the H.M.C.S. "Cabot" Division at St. John's, Nfld.

These Naval Divisions are not only the local training centres for Reserves, but are recruiting offices for the Royal Canadian Navy. Drawing heavily on surplus war equipment for basic training gear, and making use in many instances of new buildings, the Divisions are well fitted to meet modern high instructional standards. Each has been allocated responsibility for specialized training in various phases of naval activity—gunnery, harbour defence, aviation, communications, etc.—and Royal Canadian Navy officers and men have been provided as instructors. Each Division is commanded by a R.C.N. (R) Active List officer, under whom is a Royal Canadian Navy staff officer.

More than 3,000 officers and men of the R.C.N. (R), including members of the University Naval Training Divisions, took part in more than 75 separate cruises in H.M.C. ships during the May–October, 1949, training period.

Apart from annual training, officers and men of the R.C.N. (R) may perform voluntary service and special naval duty as required by Naval Headquarters. In the latter case they take the places of Permanent Force officers and men where vacancies exist in complement.

There are two types of enlistment in the R.C.N. (R). Officers may be on either the Active List or the Retired List. Those on the former must take periodic training, but retired officers may volunteer for training if they so desire. Both classes are liable to mobilization in a time of emergency.

Men are placed on Active or Emergency Lists and are governed by the same conditions as apply to officers. They sign on for five-year periods.

**University Naval Training Divisions.**—Divisions for naval training are established at 32 universities and colleges across Canada: Prince of Wales College, St. Dunstan's College, Acadia University, Dalhousie University, Nova Scotia Technical College, St. Francis Xavier University, University of King's College, University of St. Mary's College, Mount Allison University, University of New Brunswick, College Saint-Alexandre de la Gatineau, École Polytechnique, Laval University, McGill University, Sir George Williams College, University of Montreal, Assumption College, Carleton College, McMaster University, Ontario Agricultural College, Ottawa University, Queen's University, St. Patrick's College, University of Toronto, University of Western Ontario, Lakehead Technical Institute, University of Manitoba, University of Saskatchewan, Regina College, University of Alberta, University of British Columbia and Victoria College.

The University Naval Training Divisions program offers undergraduates of all faculties four years of instruction leading to a commission in the Royal Canadian Navy and the Royal Canadian Navy (Reserve). It is designed to produce officers in all branches and, to this end, offers training both ashore and afloat.

Training is taken at Naval Divisions and at universities during the academic year. Summer vacation training is taken both in the schools at the coasts and in H.M.C. ships.

**The Royal Canadian Sea Cadets.**—The Royal Canadian Sea Cadets consists of 80 authorized corps, sponsored by the Navy League of Canada and trained and supervised by the Royal Canadian Navy. The authorized strength is 10,000 cadets between the ages of 14 and 18 years. During a period of two summer months, at five different camps maintained for their training, 4,000 cadets averaged 14 days each.

## Subsection 2.—The Canadian Army

**Command.**—The system of command of the present peacetime Canadian Army includes:—

- Army Headquarters*—Ottawa, Ont. (subdivided)
  - The General Staff Branch
  - The Adjutant-General Branch
  - The Quartermaster-General Branch\*
- Western Command*—Headquarters, Edmonton, Alta.
  - British Columbia Area—Headquarters, Vancouver, B.C.
- Prairie Command*—Headquarters, Winnipeg, Man.
  - Saskatchewan Area—Headquarters, Regina, Sask.
- Central Command*—Headquarters, Oakville, Ont.
  - Western Ontario Area—Headquarters, London, Ont.
  - Eastern Ontario Area—Headquarters, Kingston, Ont.
- Quebec Command*—Headquarters, Montreal, Que.
  - Eastern Quebec Area—Headquarters, Quebec City, Que.
- Eastern Command*—Headquarters, Halifax, N.S.
  - New Brunswick Area—Headquarters, Fredericton, N.B.
  - Newfoundland Area—Headquarters, St. John's, Nfld.
- Northwest Highway Command*—Headquarters, Whitehorse, Yukon
- Canadian Army Liaison Staff*—Washington, D.C., U.S.A.
- Canadian Army Liaison Staff*—London, England.

Army Headquarters conducts the planning and policy for the administration and training of the Active and Reserve Forces of the Canadian Army. It administers corps schools and other training establishments. Matters affecting Public Relations, Cadet Services, Military Intelligence, Chaplain Services, Provost and associated activities are directed by Army Headquarters through Commands.

The authority formerly vested in Military District Command has been given considerably wider scope in the new Command organization. The five principal Commands are charged with complete military responsibility, under Army Headquarters, for all matters affecting their territorial areas and the command and administration of all troops within these areas.

**Organization.**—There is but one Canadian Army which includes all the ground forces of Canada. Service is on a voluntary basis. The organization of the Army provides for six component parts as follows:—

*The Active Force.*—The Active Force is available for General Service and comprises a Field Force, Coast and Anti-Aircraft Defence Units, Headquarters, Command and Area Staffs; also training, intercommunication, administration, research and development staffs, units and establishments, officers and men permanently employed but not borne on any regimental establishment.

The conditions for enlistment in the Active Force provide for men who were on Active Service in the Army during the Second World War, if they meet the physical requirements, have a Grade VIII education or the equivalent and are between 18 and 40 years of age. Young men are preferred. Men who were not on Active Service during the War may enlist if they meet the physical requirements, have a Grade X education or the equivalent and are between 18 and 25 years of age. Men qualified in a particular trade may be accepted up to the age of 35 years.

Officers of the Canadian Army come from three main sources: (1) graduates of the Canadian Services Colleges—Royal Roads at Esquimalt, B.C., and the Royal Military College at Kingston, Ont.; (2) the Canadian Officers Training Corps; (3) promotions from the ranks.

\* Includes the Branch of the Master-General of Ordnance.

*The Reserve Force.*—The Reserve Force provides the basis for the organization of a field force in the event of emergency. It is employed on a part-time basis and subject to annual military training.

*The Supplementary Reserve.*—The Supplementary Reserve maintains lists of units and a list of individuals required in the event of mobilization to complete the organization of the Army. Such personnel will not be subject to, yet not precluded from, annual military training.

*The Canadian Officers Training Corps.*—The C.O.T.C. is the fourth element of the Canadian Army and is responsible for training officer candidates during peace and war; personnel are subject to the same obligations in respect of military service as apply to other sections of the Army.

*The Cadet Services of Canada.*—Cadet Services are administered by commissioned officers of the Canadian Army, serving on a basis comparable to that of officers of the Reserve Force. These officers also handle training and are under direction of Active Force general staff officers at Command Headquarters. The peacetime reorganization of the Royal Canadian Army Cadet Corps has been completed. New regulations authorize a total of 50,000 Army cadets across Canada. There are approximately 490 separate cadet corps functioning throughout Canada. All service is voluntary. Free uniforms are provided and the opportunity is extended annually to attend summer camp in one of the five military Commands.

*The Reserve Militia.*—The Reserve Militia provides for units for home security duties which could not logically be performed by the Reserve Forces. Most prominent of militia units is the corps of Canadian Rangers, organized in June, 1947. The role of Canadian Rangers includes the provision of guides to organized troops, coast watching, rescue work in remote localities, assistance to civilian law-enforcement agencies and immediate local defence in times of emergency. Authorized strength of the organization is 5,000. Terms of service are somewhat similar to those for the Reserve Force, though there are no uniforms provided in times of peace nor any training parades. Service duties as Rangers parallel generally the civilian pursuits of members.

Additional to, but not integral parts of, the Canadian Army are: (1) officially authorized rifle associations and clubs; (2) such training centres as may be authorized from time to time by the Minister.

**Training.**—Actual training of Active and Reserve Force personnel is under General Officers Commanding the five Commands as directed by the appropriate branch of Army Headquarters.

Basic and advanced training for recruits, as well as refresher courses for all ranks, is conducted in a number of Army Corps Schools. These schools are organized on a permanent peacetime basis and are located as follows:—

- Royal Canadian Armoured Corps School, Camp Borden, Ont.
- Royal Canadian School of Artillery, Camp Shilo, Man.
- Royal Canadian School of Artillery (Anti-Aircraft), Picton, Ont.
- Royal Canadian School of Artillery (Coast and Anti-Aircraft), Esquimalt, B.C.
- Royal Canadian School of Military Engineering, Chilliwack, B.C.
- Royal Canadian School of Signals, Barriefield, Ont.
- Royal Canadian School of Infantry, Camp Borden, Ont.
- Royal Canadian Army Service Corps School, Camp Borden, Ont.
- Royal Canadian Army Medical Corps School, Camp Borden, Ont.
- Royal Canadian Ordnance Corps School, Montreal, Que.
- Royal Canadian Electrical and Mechanical Engineers School, Barriefield, Ont.
- Canadian Provost Corps School, Camp Borden, Ont.

Through international agreements, arrangements have been made for a large number of Canadian Service personnel to attend military schools and training establishments in the United Kingdom and the United States. A similar arrangement is in force for the training of military personnel from these countries in Canadian Service schools.

C.O.T.C. cadets and certain Reserve Force personnel are also given training at corps schools during the summer months. The bulk of Reserve Forces receive their annual training—generally a two-week period—at large camps across Canada. Active Force instructors and personnel handle training of reserves and their administration during camp periods.

Royal Canadian Army cadets are given the opportunity of summer training each year on a voluntary basis. Camps for Royal Canadian Army cadets are conducted in each Command.

**Operations.**—*Northwest Highway System.*—The Canadian Army is responsible for the maintenance of the Northwest Highway System from Mile 0 at Dawson Creek to where the highway enters United States territory at the Alaskan Border. This responsibility includes heavy repairs and new construction, firefighting, maintaining accommodation and other tasks along 1,221.4 miles of main highway plus many feeder roads and emergency landing strips. The Headquarters of the Northwest Highway System is at Whitehorse, Yukon, with a rear headquarters at Edmonton, Alta., and is responsible for movement control, employment services and purchasing. Army services include the Royal Canadian Engineers, Royal Canadian Army Service Corps, Royal Canadian Ordnance Corps, Royal Canadian Electrical and Mechanical Engineers, Royal Canadian Army Medical Corps and others.

*Northwest Territories and Yukon Radio System.*—The Northwest Territories and Yukon Radio System, with headquarters at Edmonton where it links up with the National Defence Signal System, consists of 24 stations scattered throughout Western Canada, Yukon, and the Northwest Territories. In many isolated communities, these stations are the sole means of rapid communication with the 'outside', and millions of words of traffic are handled annually. In addition to operating daily schedules, the stations of Yukon and the Northwest Territories originate weather reports which are transmitted to the Central Weather Bureau at Toronto, Ont.

*Army Survey Establishment.*—The Army Survey Establishment at Ottawa works closely with other government mapping agencies and with the photographic squadrons of the Royal Canadian Air Force. Using air photographs and reports of ground-survey parties, it produces many types and sizes of maps of Canadian territory for both military and civilian use. During 1949 the Army Survey Establishment had 20 ground-survey parties operating in northern British Columbia, in Yukon and in other parts of Canada.

### Subsection 3.—The Royal Canadian Air Force

The Royal Canadian Air Force is organized to provide for six components: Regular, Auxiliary, Reserve, Air Cadets, Women's Division and University Air Squadrons. At present, the two last components are dormant. The Royal Canadian Air Cadets, while not members of the Force, are affiliated with it for training and instruction, and the Air Cadet officers hold commissions in the Royal Canadian Air Force.

The Royal Canadian Air Force is administered from Air Force Headquarters at Ottawa, Ont. There are two geographical Air Commands. Training Command, with Headquarters at Trenton, Ont., embraces also Maritime Group Headquarters, Halifax, N.S., North West Air Command (Headquarters at Edmonton, Alta.) includes two groups, one at Winnipeg, Man., and the other at Vancouver, B.C. In addition to the Air Commands, Air Materiel Command (Ottawa, Ont.) directs and co-ordinates supply, equipment, aeronautical and construction engineering and aeronautical inspection services throughout the Air Force; and Air Transport Command (Rockcliffe, Ont.) co-ordinates and directs military air transport and photographic air-survey operations. The last two are functional Commands.

Air Attachés are maintained at Washington, D.C. (U.S.A.), Prague (Czechoslovakia), Paris (France), Brussels (Belgium), Stockholm (Sweden), Moscow (U.S.S.R.), and Buenos Aires (Argentina). In addition, the Royal Canadian Air Force is represented by the Senior Air Force Liaison Officers at London (England) and Washington, D.C. (U.S.A.).

**Organization.**—Plans for operational units of the Regular Force include an interceptor wing, a bomber reconnaissance squadron, two transport squadrons and three photographic survey squadrons. Fifteen squadrons are projected for the Auxiliary Force which will have an authorized establishment of 4,500 officers and men. The auxiliary units now in existence are as follows:—

No. 400 (Fighter) Squadron.....	Toronto, Ont.
No. 401 (Fighter) Squadron.....	Montreal, Que.
No. 402 (Fighter) Squadron.....	Winnipeg, Man.
No. 403 (Fighter) Squadron.....	Calgary, Alta.
No. 406 (Tactical Bomber) Squadron.....	Saskatoon, Sask.
No. 418 (Tactical Bomber) Squadron.....	Edmonton, Alta.
No. 420 (Fighter) Squadron.....	London, Ont.
No. 424 (Fighter) Squadron.....	Hamilton, Ont.
No. 438 (Fighter) Squadron.....	Montreal, Que.
No. 442 (Fighter) Squadron.....	Vancouver, B.C.

The R.C.A.F. (Reserve) is intended to provide a pool of partially trained personnel who can be mobilized, if the necessity should arise, and trained quickly to operational standards. Its members were drawn initially from former personnel of the Force who served during the Second World War.

The Royal Canadian Air Cadets, a corps of 15,000 boys between the ages of 14 and 18, come under theegis of a volunteer civilian organization—the Air Cadet League of Canada. The Royal Canadian Air Force co-operates with the League in bringing aviation and citizenship training to the air cadets who, in addition to receiving a standard course of instruction, may also qualify for trips to summer camps, flying training courses, educational scholarships and exchange visits with cadets of other countries. While the air cadets make no commitments regarding entry into the Royal Canadian Air Force, their pre-training is considered valuable as a basis for a Service career. Graduate air cadets constitute a high percentage of the enlistments in the Regular Force.

**Operations.**—During 1948, Air Transport Command flew a total of 2,246,412 air miles, a substantial increase over 1947. More than 5,500,000 lb. of freight and 33,552 passengers were carried during the year and 224,722 lb. of Service mail was carried to isolated stations in the north.

The R.C.A.F. photographed 280 square miles in 1921, the first year that photographic air survey was attempted by the Air Force. Since that date, one-half of Canada has been photographed by the R.C.A.F. In 1947 the R.C.A.F. covered

more than 400,000 square miles and in 1948 reached a peak of 911,000 square miles. The three photographic squadrons which carry on this work send out detachments each year between Apr. 15 and Oct. 1. They operate from many bases, including: Goose Bay, Labrador; Fort Chimo, Que.; Churchill and The Pas, Man.; Calgary and Edmonton, Alta.; Vancouver and Fort Nelson, B.C.; Whitehorse, Yukon; Frobisher (Baffin Island), Yellowknife and Norman Wells, N.W.T. In co-operation with the Canadian Army, the Department of Mines and Technical Surveys, and other government departments, the R.C.A.F. helps to map uncharted areas and to correct existing maps. It also assists in such work as timber and geological surveys, flood control, land developments, town planning, water-power development, irrigation projects and soil reclamation. One squadron, equipped with Canadian-built Lancasters, specializes in tri-camera photography for basic exploration; the others are used primarily for vertical photography in detailed analysis of terrain and Shoran-controlled photographic experiments.

During the 12-month period ended Mar. 31, 1949, the Royal Canadian Air Force carried out 116 separate search and rescue operations, flying a total of more than 2,500 hours. The R.C.A.F.'s Search and Rescue Organization is co-ordinated with contributing arms of the Navy and Army. Search and Rescue Control Centres are located at Maritime Group Headquarters (Halifax, N.S.), Training Command Headquarters (Trenton, Ont.), Tactical Group Headquarters (Winnipeg, Man.), North West Air Command Headquarters (Edmonton, Alta.), and No. 12 Group Headquarters (Vancouver, B.C.). These Headquarters are responsible for initiating, conducting and terminating search and rescue operations within their respective areas of control.

Search and rescue aircraft, marine craft, and special para-rescue personnel are located at the following places: Goose Bay, Labrador; Greenwood, N.S.; Trenton, Ont.; Winnipeg, Man.; Edmonton, Alta.; Fort Nelson and Vancouver, B.C.; and Whitehorse, Yukon.

**Enlistment.**—The Royal Canadian Air Force offers enlistment to skilled or unskilled men. Veterans who were on Active Service may enlist if they meet the physical requirements and are under the age of 30 years plus their number of years of Active Service. Applicants who were not on Active Service may be accepted if they meet the physical requirements, are unmarried, and are between 17 and 30 years of age. Applicants under 18 years of age must have written consent of parent or guardian. The majority of trades open for recruiting call for an educational standard of two years less than junior matriculation or equivalent.

**Commissions.**—Graduation from either of the Canadian Services Colleges (Royal Military College, Kingston, Ont., or Royal Roads, Esquimalt, B.C.) qualifies young men for acceptance in the Royal Canadian Air Force as officer trainees. Technical officer positions are granted to selected university graduates. Six-year short-service commissions are available to qualified high-school graduates and selected serving airmen.

**Training.**—The Royal Canadian Air Force Staff College at Armour Heights, Toronto, Ont., trains officers for command and staff positions (see also p. 1135). At the Institute of Aviation Medicine, Toronto, Ont., there are facilities for consultant and specialist officers, laboratories for nutritional research, a human centrifuge, a cold low-pressure chamber, a tropical room, a statistical section, and well-equipped laboratories for the study of all branches of aviation medicine.

Ground training was in full operation during 1948-49. Schools at Trenton, Aylmer, Camp Borden, Rockcliffe, Clinton and Centralia in Ontario, worked to capacity instructing recruits in the skills of the various Air Force trades, and at the same time gave additional courses to many veteran airmen who had re-engaged in the peacetime Force.

During the summer the Royal Canadian Air Force operates the Summer Employment Plan, under which veteran officers attending university are brought back into uniform, to work and train with the Air Force during the summer months. Students from Canadian universities who took part in this plan were engaged in medical and technical research and survey work. The plan is designed to train the students in the various specialist branches of the Service during their university course. Qualified students may be offered commissions in the R.C.A.F. upon completion of their professional training.

There was increased activity on flying training stations as a steady flow of new entries began aircrew training. The first of the post-war flight cadets have now completed their training and have short-service commissions in the Air Force. Regular intakes now pass through No. 1 Manning Depot, Toronto, Ont., to the Flying Training School, Centralia, Ont., to the Radar and Communications School, Clinton, Ont., or to the Air Navigation School, Summerside, P.E.I., depending upon whether they are taking pilot, radio officer, or navigation training. Upon completion of their training they become flying officers.

University undergraduates under the Summer Flying Training Scheme undergo aircrew training for three consecutive summers, and upon successful completion of their university course receive commissions in the Regular, Auxiliary or Reserve Air Forces. During the summer of 1949 the first university undergraduates received their pilot and radio-officer wings.

**Air Force Day.**—Air Force Day, instituted in 1947, the annual "Open House" of the R.C.A.F., falls on the first or second Saturday in June. The purpose is to give the Canadian public an opportunity to see the equipment and personnel of the Air Force, with the hope of establishing a better understanding of Service activities and operations.

#### **Subsection 4.—The Defence Research Board**

The Department of National Defence Act was amended on Apr. 1, 1947, to provide for the establishment of a Defence Research Board. The Board consists of six ex officio and six appointed members serving under a full-time chairman. The ex officio members are the Director General of Defence Research (Chairman of the Board), the Chiefs of Staff of the three Armed Services, the President of the National Research Council and the Deputy Minister of National Defence. The remaining six members are appointed by the Governor General in Council and are members with scientific and technical qualifications drawn from the universities and industry. The organization consists of a headquarters staff, advisory committees and field research stations.

The Defence Research Board is an essential part of the defence of Canada and, as such, has been described as a fourth Service. Its fundamental purpose is to correlate the special scientific requirements of the Armed Forces with the general research activities of the scientific community at large. This task is the main function of the Headquarters Staff. Its work is strengthened by the expert counsel of comprehensive advisory committees.

In order to avoid unnecessary duplication of research facilities, the research stations of the Board deal only with those problems that are peculiar to national defence. In other fields, such as electronics and aeronautics which touch upon related civilian researches, it collaborates with existing research laboratories, especially those of the National Research Council.

In all its work, the Board gives priority to problems in which Canada has special interest or for which national facilities are specially suited. Experience has already shown that well-directed defence research produces results that are of value, both direct and indirect, to the civilian economy.

It was, for example, revealed in 1947 that, as a result of wartime research into defensive measures against possible bacteriological warfare, Canadian scientists in collaboration with United States colleagues produced a vaccine to immunize cattle against the highly destructive rinderpest disease. The results of this research have been given freely to the world.

In planning this organization, the Government considered the vital need for continuity in research and planned the Defence Research Board as a fully integrated and permanent part of the defences of the country. To assist co-ordination at the highest level, the Chairman of the Board has the status of a Chief of Staff and is a member of the Chiefs of Staff Committee and of the Defence Council.

### Section 3.—Service Training

Co-ordination of service training in all its stages is carried out in Services Colleges and Staff Colleges. Services Colleges are cadet institutions qualifying graduates for commissions in the Permanent Forces and accept applicants for any of the Services. National Defence and Staff Colleges are more specialized but operate jointly to a great degree. At pp. 1138-39 of the 1948-49 Year Book a short description of each Canadian Service College and Advanced Training College appears.

### Section 4.—The Industrial Defence Board\*

The Industrial Defence Board was established by Order in Council in April, 1948, under the Department of National Defence. In March, 1949, it was transferred to the Department of Trade and Commerce, the government agency chiefly concerned with matters of industrial preparedness.

The Board is an advisory agency composed of industrialists and government departmental representatives. The chief functions of the Board are to advise the Government of Canada, through the Minister of Trade and Commerce, on such matters as: (1) the industrial war potential of Canada; (2) plans for industrial production in the event of war; (3) liaison among the Canadian Armed Forces, the Canadian Industrial Preparedness Association, Canadian Arsenal, Limited, and other government agencies and industries concerned with industrial preparedness; (4) standardization of specifications and industrial practices; (5) the location of industries; (6) the development, procurement, inspection, storage and distribution of material and equipment, and (7) the maintenance of reserve stocks.

The Board is composed of: a Chairman and Vice-Chairman, chosen from industry; five additional representatives from industry; the Associate Deputy Minister of Trade and Commerce; the Deputy Minister of National Defence; the Deputy Minister of Labour; the three Principal Supply Officers of the Armed Forces; the President of Canadian Arsenal, Limited; and the Chairman of the Defence Research Board.

\*Revised by S. D. Pierce, Associate Deputy Minister, Department of Trade and Commerce.

Subsection 2. War Veterans Allowances.	1141		

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The basis of administration of the Department of Veterans Affairs, established in October, 1944, is dealt with in the 1946 edition of the Year Book at pp. 1053-1054. The work of the Department as it had developed up to Mar. 31, 1947, is outlined at pp. 1134-1155 of the 1947 edition and is brought up to Mar. 31, 1949, in the present volume.

Veterans Insurance, which has previously appeared as Section 6 of this Chapter, has been transferred to the Insurance Chapter, see p. 1120.

### Section 1.—The Department of Veterans Affairs

The work of the Department of Veterans Affairs continued to show, during the fiscal year ended Mar. 31, 1949, the change which was becoming evident in the previous fiscal year. The immediate post-discharge rehabilitation phase continued to diminish and in its place a welfare phase began to develop. As a result benefits designed primarily as rehabilitation measures became less and less important.

Those phases of the Department's work showing increased importance during the year demanded greater effort. The number of disability pensioners increased as did the number of older veterans who were eligible for consideration under the War Veterans' Allowance Act. Because of a widening of the Regulations to allow veterans in receipt of war veterans allowances to receive hospitalization by the Department, the number being treated in departmental institutions increased.

Medical treatment and care for veterans, which occupies the time of more than 61 p.c. of the departmental staff, is provided by 31 institutions administered by the Department. Other institutions are under contract with the Department and their services are used where departmental facilities are not available. The remainder of the departmental staff deals with other branches: the Veterans' Land Act Administration; the Veterans' Welfare Services Branch; the Canadian Pension Commission; the War Veterans' Allowance Board; General Administration; etc.

\* Material for this Chapter has been contributed by the various Branches of the Department of Veterans Affairs through E. B. Reid, Director of Public Relations of Veterans Affairs.

The Department maintains 17 District Offices (excluding one in Newfoundland, which in 1949 was in the process of organization) and 2 Sub-District Offices in Canada together with a District Office at London, England. The Administration of the Veterans' Land Act also maintains District and Regional Offices in locations as accessible as possible to the veteran. Travelling welfare officers operating from these offices greatly assist veterans to take advantage of those rights and privileges made available to them through the Department.

## Section 2.—Discharge Gratuities and Re-Establishment Credits

The amount expended as gratuities under the War Service Grants Act showed a considerable decrease between Mar. 31, 1948, and Mar. 31, 1949. The bulk of payments made during that fiscal year covered veterans who became qualified under the Allied Veterans Benefits Act.

### 1.—Gratuity Payments under the War Service Grants Act, Years Ended Mar. 31, 1945-49

<sup>1</sup> January, February and March only.  
from 1946 to 1948.

<sup>2</sup> This credit is the result of a bookkeeping adjustment

**Re-Establishment Credits.**—During the fiscal year 1948-49 the amount of re-establishment credit authorized for use was slightly over \$35,000,000 or approximately one-half that authorized during 1947-48. Of the total authorized issues of the re-establishment credit to Mar. 31, 1949, more than 78 p.c. was used in connection with the homes of the veterans.

To Mar. 31, 1949, 957,964 veterans' re-establishment credit accounts had been opened and 568,445 of these accounts had been closed due to authorization having been given for the complete disposal of the credit. In addition to the \$230,186,919 authorized for use for the purposes listed in Table 2, about \$57,000,000 was written off for veterans who had used the alternative benefit of training, or had made application to settle under the Veterans' Land Act.

The expenditures made to Mar. 31, 1949, resulted from 1,551,151 individual approved applications for use of the credit.

## 2.—Re-Establishment Credits Paid, by Required Purposes, Years Ended Mar. 31, 1946-49

NOTE.—Figures for 1945 and 1946 will be found at p. 1143 of the 1948-49 edition of the Year Book.

## Section 3.—Post-Discharge Treatment

### Subsection 1.—General Policy

The general policy with regard to treatment services is based on two fundamental principles designed to provide the best possible medical and surgical care for veteran patients. The first principle is close co-operation with the universities, so that veterans hospitals may be used for under-graduate or post-graduate teaching. As at Mar. 31, 1949, 216 interns were employed in departmental hospitals. In 1948-49 nine hospitals were approved for advanced post-graduate medical training, internal medicine and general surgery by the Royal College of Physicians and Surgeons of Canada. The larger hospitals were approved in advanced post-graduate training in various specialties. The greatest number of specialties approved for any one hospital was 15.

The second principle is that consultant staffs at the departmental hospitals should, as far as possible, be employed on either a part-time or a temporary basis, thus permitting the Department to secure the services of highly qualified professional men who, for the most part, are engaged in university teaching. This expedient has proved of benefit both to the veteran and to the departmental resident staff. The veteran patient is assured of the most modern methods of diagnosis and treatment, and the intern benefits by close association with leaders in the profession.

Special centres for the treatment of such conditions as arthritis, paraplegia and tuberculosis have been established in many of the larger departmental hospitals and clinical research is being carried out along with treatment. Where depart-

mental hospital facilities are not available, veterans with service-related disabilities and others in case of necessity may still continue to receive medical services through the doctor of their choice.

As at Mar. 31, 1949, medical social work was being conducted in 11 general-treatment departmental hospitals to assist in the treatment of the social and emotional problems adversely affecting the health of patients.

### Subsection 2.—Treatment Facilities

As at Mar. 31, 1949, the Department had in operation 10,239 beds in 31 institutions. Of these 13 were general-treatment hospitals, seven were health and occupational centres for convalescence, three were special institutions and eight were veterans homes.

The building program of the Department continues with all bed facilities under construction being of a replacement nature.

Statistics relative to the Treatment Services activities may be found in the Chapter on Health and Welfare at pp. 258-260 of this volume.

### Subsection 3.—Dental Services

A brief history of the Dental Services from their organization in 1919 is contained in the 1946 and 1947 editions of the Year Book at pp. 1059-1060 and pp. 1138-1139, respectively.

During the fiscal year 1948-49 the number of dental treatments provided and the number of patients treated showed declines from those of the previous year. The departmental clinics continued to operate at capacity and the decrease was reflected in the amount of work authorized to be done by private dentists. During the year the number of departmental clinics was reduced from 31 to 25. Applications for post-discharge treatment, which up to Mar. 31, 1948, amounted to 662,481, numbered only 933 during the year ended Mar. 31, 1949.

<i>Year Ended Mar. 31—</i>	<i>Treatments</i>	<i>Patients Completely Treated</i>	<i>Year Ended Mar. 31—</i>	<i>Treatments</i>	<i>Patients Completely Treated</i>

1944.....	66,562	11,841	1949.....	218,173	35,951

### Subsection 4.—Prostheses and Surgical Appliances

The Prosthetic Services Branch of the Department of Veterans Affairs, established in August, 1916, has, as its first responsibility, the provision of prostheses and orthopaedic appliances to veterans and other persons entitled to such supply under Order in Council P.C. 2048 as amended. Appliances are supplied upon request to Provincial Workmen's Compensation Boards, Canadian National Railways, Department of National Defence, Department of National Health and Welfare and others.

The organization consists of a main manufacturing and fitting centre at Toronto and 11 district centres established in the major Canadian cities, equipped with facilities for measuring, fitting, adjusting and maintaining artificial limbs, orthopaedic boots, splints, braces, artificial eyes and other appliances. Minor orthopaedic appliances such as trusses, glasses, hearing aids, elastic hosiery, etc., are supplied through purchase from private manufacturers.

During the fiscal year 1948-49 several important changes were made in the accommodation of the district centres. At Toronto the centre was moved to Sunnybrook Hospital: at Winnipeg and Montreal the centres were moved to Deer Lodge Hospital and Queen Mary Veterans Hospital, respectively.

In the district centres research is continuously carried on to better the types of prostheses and appliances provided to the veterans. Recently an important development has been made in the design of special boots for arthritic cases.

The number of persons supplied with appliances during the year ended Mar. 31, 1949, was 47,007 as compared with 45,238 during the previous fiscal year. Appliances supplied since Apr. 1, 1940, have been as follows:—

Year Ended Mar. 31—	Total Production Jobs	Stock and Purchases	Total Issues	Year Ended Mar. 31—	Total Production Jobs	Stock and Purchases	Total Issues

## Section 4.—Pensions and Allowances

### Subsection 1.—The Pension System

A summary of the development of Canadian pensions legislation following the First World War is outlined at pp. 758-760 of the 1943-44 Year Book. A further review of the procedure and summary of the changes made after the Second World War may be found at pp. 1146-1149 of the 1948-49 Year Book.

The Canadian Pension Commission administers the Pension Act and the Civilian War Pensions and Allowances Act.

As at Mar. 31, 1949, there were in force 192,624 pensions with an annual liability of \$91,629,690; statistics from 1941 are provided in Table 3.

### 3.—Pensions in Force as at Mar. 31, 1941-49

NOTE.—Figures for the years 1918-40 are given at p. 871 of the 1945 Year Book.

Information concerning claims arising out of service during peacetime, civilian war pensions and allowances and the payment of pecuniary grants for gallantry awards will be found at pp. 1148-1149 of the 1948-49 edition of the Year Book.

**Extension of the Canadian Pension System to Newfoundland Veterans.**—In accordance with the Terms of Union, Canada agreed to make available to Newfoundland veterans and their dependants the same awards of pension as are available to Canadian veterans under similar circumstances.

All Newfoundland awards in force at the date of Union—Mar. 31, 1949—were reviewed by the Canadian Pension Commission and arrangements completed for the issue of the first payment pension cheques in Canadian funds so as to reach the recipients by the end of April, 1949.

For the convenience and assistance of Newfoundland veterans and their dependants, the Commission established a district office with a senior Pension Medical Examiner and staff at St. John's, which deals with inquiries, investigations, medical examinations, etc., pertaining to Newfoundland cases.

**Veterans' Bureau.**—The Veterans' Bureau was established in 1930 to assist the applicant for war disability pension and present his claim to the Canadian Pension Commission. (See 1947 Year Book, p. 1142.) The services of the Bureau are free to the applicant. Bureau Advocates assist not only ex-members of the military forces, but also those given disability pension rights under the Civilian War Pensions and Allowances Act. Claimants have been represented by Bureau Advocates in almost all the appeals that have been made.

In addition to assisting applicants on entitlement claims, Bureau Advocates are charged with the duty of advising and assisting ex-service personnel or other persons entitled to claim for pension on any phase of pension law or procedure which may have a bearing on the pension claim. In all offices across Canada they are called upon daily to advise and assist in matters quite apart from war disability pensions.

Departmental records show that a total of 2,225 applications for an Appeal Board hearing were filed during the fiscal year 1948-49; this compares with 1,517 filed in the previous fiscal year. Since Sept. 1, 1939, a total of 15,831 applications for Appeal Board hearings have been filed. The Veterans' Bureau had approximately 8,229 pension claims under preparation in varying stages of activity at Mar. 31, 1949.

### Subsection 2.—War Veterans Allowances

The War Veterans' Allowance Act was introduced in 1930 to make provision for veterans who were incapable of maintaining themselves on attaining the age of 60 or at any age if permanently unemployable and, as a result, in need of financial assistance.

A new Act was passed in 1946 and this was further amended in 1948. A summary of the provisions of the Act is provided at pp. 1150-1151 of the 1948-49 edition of the Year Book.

From the inception of the Act to Mar. 31, 1949, a total of 59,870 awards were made by the War Veterans' Allowance Board. Of these 29,587 were discontinued because of death or other reasons leaving 30,283 recipients for whom there is an annual liability of \$18,290,177.

The majority of the current recipients are veterans of the First World War. However, there are 68 orphans, 5,816 widows, 152 veterans of the North West Field Force, 628 veterans of the South African War, 1,218 veterans of the Second World War and 405 dual-service veterans included in total recipients.

### Section 5.—Rehabilitation of Veterans

The Veterans Welfare Services Branch of the Department of Veterans Affairs is responsible for the efficient administration of benefits available to discharged members of the Forces under the terms of the Veterans' Rehabilitation Act and the War Service Grants Act. In addition to training, the functions of the Branch are as follows:—

(1) *Administration of out-of-work allowances.* Payment of out-of-work allowances, under an agreement with the Unemployment Insurance Commission, is made by the Department of Labour on authorization of the Department of Veterans Affairs.

Administrative machinery to place veterans in employment comes under the jurisdiction of the Department of Labour, as does the administration of the Reinstatement in Civil Employment Act. Under arrangements made between the two Departments, however, the Department of Veterans Affairs is accorded the privilege of finding employment for the seriously disabled in collaboration with officials of the National Employment Service.

As a result of this close liaison between the Departments in all centres where the National Employment Service maintains an office, other than in those centres where the Department of Veterans Affairs maintains a District or Sub-district Office, the Employment Service has on its staff a Veterans Officer who is available to give advice and guidance to veterans on matters relating to their rehabilitation which come within the jurisdiction of the Department of Veterans Affairs.

(2) *Administration of allowances for veterans awaiting returns from private enterprise engaged in on their own account, including allowances available to veterans who have taken up full-time farming or commercial fishing under the terms of the Veterans' Land Act.* Close liaison is maintained by the Veterans Welfare Services Branch, the Re-Establishment Credits Division of the Rehabilitation Branch and officials of the Veterans' Land Act Administration and care is exercised to ensure that the veteran will get the best possible advice before embarking upon an enterprise or business. In this connection also it should be noted that members of citizens' committees, familiar with business opportunities in the particular centre in which the veteran wishes to establish himself, co-operate in advising the Department and these veterans of the chances of the veteran succeeding in his proposal.

(3) *Administration of allowances available to veterans who are temporarily incapacitated.* This benefit is designed particularly to care for veterans who do not require any active remedial hospital care to which they may be entitled but where, because of some ailment, they may be debarred from working for a short period.

(4) *Administration of the Unemployment Insurance contributions, payable for the period of service (or from June 30, 1941) on the completion of 15 weeks in insurable employment after discharge.*

Officials of the Veterans Welfare Services Branch also act as the veteran's friend in advising with regard to rights and privileges under regulations administered by other government departments—federal, provincial and municipal.

### Subsection 1.—Employment and Allowances

**Employment.**—The return to civil life and gainful employment of veterans has been greatly assisted by the National Employment Service of the Department of Labour, which, through the policy of veterans' preference and by untiring effort, has kept the numbers of unemployed veterans at a minimum. Unemployment among veterans follows the normal seasonal trend and, during the fiscal year ended Mar. 31, 1949, an average of more than 10,300 placements per month were made by the National Employment Service for veterans of the Second World War. Peak and low unemployment figures for veterans of the Second World War in the fiscal year ended Mar. 31, 1949, were 44,811 and 12,344, respectively. Corresponding figures for the previous fiscal year were 45,833 and 17,749 and for 1946-47 they were 71,724 and 39,333, respectively.

**Out-of-Work Allowances.**—Since applications for out-of-work allowances must be made within a period of 18 months after discharge the numbers in receipt of the allowance are rapidly declining. At Mar. 31, 1949, only 190 veterans were in receipt of this allowance compared with 48,521 at the end of April, 1946. This allowance during the immediate post-discharge period served the purpose of providing assistance to veterans who were in the process of obtaining employment. During this period a total of 171,590 awards of the allowance were made.

**Unemployment Insurance Contributions.**—During the 1948-49 fiscal year contributions paid numbered 127,633 for an amount of \$13,039,615 as compared with 194,967 payments for \$20,029,198 in the previous fiscal year. From November, 1941, to Mar. 31, 1949, a total of 458,763 payments—including 16,177 payments on behalf of female veterans—have been made for contributions totalling \$43,349,821.

**Temporary Incapacity Allowances.**—During the 1948-49 fiscal year there were practically no activities under this allowance. Up to Mar. 31, 1949, 4,753 veterans had received assistance.

**Awaiting>Returns Allowance.**—This allowance was instrumental in assisting, up to Mar. 31, 1949, a total of 57,448 veterans, including 321 women veterans, who had attempted to take up an occupation on their own account as a means of rehabilitation.

As at Mar. 31, 1949, there were 737 veterans receiving the allowance and 1,854 were temporarily suspended pending final decision as to whether or not further payments should be made.

The occupational and geographical distribution of these veterans by district is shown in Table 4.

Of the veterans who discontinued receipt of the allowance, 90 p.c. were successfully established in the occupation of their choice.

#### Subsection 2.—Vocational and University Training

The vocational training program, authorized under the Veterans' Rehabilitation Act, is dealt with in the Labour Chapter at p. 701, and the university training for veterans program in the Education Chapter at p. 364.

#### Subsection 3.—The Veterans' Land Act

The Veterans' Land Act is designed to assist veterans who are eligible by reason of service and who can qualify in becoming established on the land in full-time farming, part-time farming (small holding), or commercial fishing. Its financial benefits enable the veteran to start off with a substantial equity, which past experience has demonstrated is essential to sound credit land-settlement operations.

The provisions of the Act will be found at pp. 1072-1073 of the 1946 Year Book and an explanation of the amendments at pp. 1148-1149 of the 1947 edition and p. 1157 of the 1948-49 edition.

An important part of ensuring the success of the veteran who settles on the land lies in the correct and fair appraisal of the land prior to its purchase for settlement purposes. As at Mar. 31, 1949, 31,294 full-time farming properties, 18,958 small holdings and 796 commercial fishing properties had been appraised for project purposes or for immediate resale to veterans under the terms of the Veterans' Land Act. The number of acres purchased in these three categories amounted to 3,665,212 in full-time farming, 97,886 in small holdings and 9,099 in commercial fishing properties.

During the fiscal year 1948-49 a total of 10,209 veterans were qualified for settlement; financial assistance was approved for 6,313; a total of 1,437 houses were completed and 2,012 brought under construction under the individual contract basis.

Table 5 gives an indication of the number of veterans who have qualified for settlement; the number who have been approved for financial assistance, and the amounts approved in the form of loans and grants to these veterans.

**5.—Summary of Settlement Status, Loans and Grants under the Veterans' Land Act, 1942, as at Mar. 31, 1949**

Item	Full-Time Farming	Small Holdings	Commercial Fishing	Provincial Lands	Federal Lands	Total
Qualified for settlement..... No.	28,573	26,436	932	4,680	186	60,807

### Subsection 4.—Casualty Rehabilitation

The rehabilitation of veterans with physical disabilities is a process that commences at the time a disabling condition is diagnosed. The objective of this rehabilitation is the return of the disabled veteran to the best possible physical, mental, social, economic, and vocational adjustment and usefulness of which he is capable. This definition sets not only the standards to be attained, but also indicates the type of problem encountered most frequently.

The compass of rehabilitation for the disabled is so broad that every division of the Department of Veterans Affairs, together with many other government and private agencies, may be required to contribute to the provision of the total range of services necessary in any individual case. As it is the aim of the Federal Government's rehabilitation program that disabled veterans be prepared to return to the successful performances of jobs in normal competitive industry, industry must itself co-operate by receiving the disabled into its employ. Finally, the disabled themselves play the most important role in this program. They must use intelligently the services provided and must justify the confidence of employers. The vast majority of disabled veterans are demonstrating in their efforts to rehabilitate themselves qualities of initiative and determination of the highest possible order and are proving to be efficient, safe and reliable employees.

The Casualty Rehabilitation Division, the function of which is to provide vocational guidance, assistance in securing suitable employment and vocational after-care, maintains a register of all those veterans whose disabilities in relation to other factors, such as education, previous employment experience, and personality, constitute a serious problem in occupational adjustment.

There were, up to Mar. 31, 1949, 32,950 registrations with this Division of which 13,454 were still active cases. The registration according to the type of disability is shown in the following statement:—

<i>Type of Disability</i>	<i>Active Cases</i>	<i>Closed Cases</i>	<i>Total</i>
	No.	No.	No.
Amputation.....	500	1,588	2,088
Other muscular and skeleton system disabilities.....	3,732	7,036	10,768
Total and partial loss of hearing or sight.....	763	1,489	2,252
Neurological cases.....	535	631	1,166
Heart and vascular system.....	942	2,037	2,979
Respiratory disabilities.....	5,149	3,932	9,081
Mental and emotional disabilities.....	492	366	858
Unclassified.....	1,341	2,417	3,758
TOTALS.....	13,454	19,496	32,950

During the fiscal year ended Mar. 31, 1949, the total number of registrants increased by about 2,900 cases but the number of active cases decreased by approximately 4,400 cases. Progress in the rehabilitation of the cases between Mar. 31, 1948, and Mar. 31, 1949, was as follows:—

<i>Status</i>	<i>Mar. 31, 1948</i>	<i>Mar. 31, 1949</i>
	No.	No.
Employed.....	20,384	24,478
Unemployed.....	1,785	1,592
Receiving treatment, training or other services.....	6,472	5,551
Rehabilitation not feasible.....	785	997
Unknown.....	614	332
TOTALS.....	30,040	32,950

In 1948-49 an intensive educational campaign was conducted to create for the tuberculous veteran a background of understanding with prospective employers and fellow employees.

Among the agencies working with the Department in its program for the rehabilitation of disabled veterans are the National Employment Service, the Canadian Vocational Training organization, the Canadian National Institute for the Blind, the War Amputations of Canada, the National Society for the Deaf and the Hard of Hearing, and the Canadian Paraplegic Association.

### **Subsection 5.—Rehabilitation of Women**

The rehabilitation of women veterans has continued side by side with that of the male veterans and no particular problems have been encountered.

A high percentage of the women veterans have taken advantage of the provisions for training under the Veterans' Rehabilitation Act and up to Mar. 31, 1949, more than 13,600 approvals for training allowances were made. Other women veterans were established under the Veterans' Land Act and to Mar. 31, 1949, 328 had been settled.

In their use of the re-establishment credit women veterans have used more than 93 p.c. of the total amount approved for purposes directly connected with the home. To Mar. 31, 1949, a total of \$5,582,806 in re-establishment credits had been authorized for expenditure.

Citizens committees, women's clubs and organizations have been invaluable in helping the ex-service woman to fit into and take part in community life. Full co-operation with the Department of Veterans Affairs has been given, particularly in the matter of finding accommodation for the women who have moved to other centres to take training or employment.

### **Subsection 6.—Rehabilitation of Older Veterans**

The welfare of the older veteran remains one of the more challenging functions of the Department of Veterans Affairs.

Continuous study has been made of employers' objections to the hiring of older workers and of the merits of this class in the productive and social economy of the country. Appropriate educational publicity has been maintained in co-ordination with the Department of Labour and other government and private agencies. A nation-wide campaign was sponsored by the Department on behalf of the Corps of Commissionaires. This organization now employs several thousand older veterans in watchmen and security-guard work at established wage rates.

At Mar. 31, 1949, 8,901 older veterans were registered for employment with the National Employment Service offices; during the year 44,600 registrations were made and at Mar. 31, 1949, 8,586 remained unplaced. Thus, during the year, 44,915 older veterans were assisted into employment or other means of maintenance.

The Department of Veterans Affairs has established throughout its district offices small specialist staff sections whose responsibility it is, in co-operation with the National Employment Service, to screen, classify and counsel older veterans and to assist them to obtain work suited to their capacity and ability or to obtain other means of maintenance.

#### **Subsection 7.—Assistance in Social Problems**

The social adjustment of individual veterans is of real concern to the Treatment and Rehabilitation Branches of the Department of Veterans Affairs.

The Social Service Division consists of trained social workers whose purpose is to increase the social-work knowledge and understanding of members of the Department who see the veteran at first hand. It is also the function of the Division to see that existing social services are utilized to the maximum in dealing with problems presented by veterans who come to the Department for assistance. It is a basic assumption that the Department must not establish any social service for the veteran which is already available to him as a member of the community in which he lives. In order to prevent such duplication of service, it is necessary for the Social Service Division to work in close co-operation with local social agencies, community chests and councils, municipal, provincial and federal welfare departments, as well as schools of social work.

<sup>1</sup> Excludes 3 sq. miles in Labrador.

<sup>2</sup> Does not add to total for Canada due to fractions of sq. miles.

<sup>3</sup> Includes the Gattineau Park (25 sq. miles) and the Quebec Battlefields Park (0.36 sq. miles) which are under federal jurisdiction but which are not technically National Parks.

<sup>4</sup> Less than 1 sq. mile.

<sup>5</sup> Excludes Coast of Labrador.

<sup>6</sup> Includes 952,849 sq. miles set aside by Order in Council as native game preserves, in which only Indians and Eskimos may hunt, as game sanctuaries in

Council as native game preserves, in which only Indians and Eskimos may hunt, as game sanctuaries in which hunting and trapping is otherwise forbidden, and as reserves for reindeer grazing, but which are not regarded as National Parks.

<sup>7</sup> Includes Wood Buffalo Park (13,675 sq. miles) which, although reserved by the Federal Government, is not administered as a National Park.

<sup>8</sup> That portion of Wood Buffalo Park in N.W.T.

<sup>9</sup> Includes 1,392 sq. miles of unsurveyed lands—Provincial Park areas.

**Subsection 1.—Federal Public Lands\***

The public lands under the administration of the Federal Government comprise: lands in the Northwest Territories, including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay; lands in Yukon Territory; National Parks and National Historic Sites; Forest Experiment Stations; Experimental Farms; Indian Reserves; Ordnance and Admiralty Lands; and, in general, all lands held by the several Departments of the Federal Government for various purposes connected with federal administration, including the Tar Sands Reservation comprising four areas, amounting in all to 2,068 acres, in the Fort McMurray District of Alberta.

The largest land areas under federal administration are those of Yukon and the Northwest Territories, amounting to about 1,458,784 square miles or 42 p.c. of the land surface of Canada. In general, the southern border of both Yukon and the Northwest Territories is 60°N. latitude. In Europe, the cities of Oslo, Stockholm and Leningrad are near this line; about three-quarters of Norway, two-thirds of Sweden, Finland and a large portion of Russia are north of it. This northern part of the national domain is under the administration of the Lands and Development Services Branch of the Department of Mines and Resources. The Royal Canadian Mounted Police maintain law and order.

**Recent Developments in the Northwest Territories.**—Increased power supply, due to the completion of the Snare River power project in October, 1948, (see p. 562) and the construction of roads have proved of great assistance to the mining industry.

In October, 1949, there were three producing gold mines in the Northwest Territories. These were the Con Rycon Mine, the Negus Mine and the Giant Yellowknife Mine, all situated in the Yellowknife mining district.

The Con Rycon Mine, situated about one mile south of Yellowknife, is operated by the Consolidated Mining and Smelting Company of Canada, Limited. The main shaft is sunk to a depth of about 2,460 ft. and lateral development is in the neighbourhood of 63,335 ft. This mine was the largest gold producer in 1948 with a total production of about 55,252 fine oz. Production in 1949 to July 31 was 36,804 fine oz. Of the 325 men employed at July 31, 1949, 137 worked underground. Ore was being milled at the rate of about 300 tons a day.

The Negus Mine, adjoining Con Rycon on the south, increased its daily tonnage milled from 70 tons early in 1948 to 190 tons at July 31, 1949. The main shaft is sunk to a depth of 1,940 ft. and production is obtained from the Campbell Shear Zone at the 11th and 13th levels. Lateral development is about 37,590 ft. Production in 1948 was 23,267 fine oz. and production in 1949 to July 31 was 15,538 fine oz. Of the 155 employed at the latter date 62 worked underground.

The Giant Yellowknife Gold Mine, situated about three miles north of Yellowknife, is the latest producer in the district. Milling began in May, 1948, and by July, 1949, 350 tons were being treated daily with the expectation of an increase to 400 tons by the end of the year. Development has taken place at the No. 2 shaft which has been sunk to a depth of about 780 ft. with lateral development on three levels. The No. 3 shaft has been collared and surface buildings are being constructed. Production in 1948 amounted to 7,868 fine oz. and, up to Aug. 31, 1949,

\* Prepared under the direction of R. A. Gibson, I.S.O., Director, Lands and Development Services Branch, Department Mines and Resources, Ottawa.

62,643 fine oz. were produced. These 1949 figures do not give a true indication of the productive capacity of this mine as a concentrate stock-pile, accumulated prior to the roaster plant going into operation early in 1949, has been gradually depleted by processing with the concentrate produced each day. Of the 387 men employed at July, 1949, 102 worked underground.

A shortage of ore forced the Thompson-Lundmark Mine to close down in April, 1949. Shaft sinking, diamond drilling and other development work is being carried on at the properties of: Yellorex Mines, Limited; Discovery Yellowknife Mines, Limited; Akaitho Yellowknife Gold Mines, Limited; North Inca Gold Mines, Limited; Progressive Diversified Minerals, Limited; Bulldog Yellowknife Gold Mines, Limited; Gateway Gold, Limited; Canus Petroleum Corporation, Limited; Consolidated Mining and Smelting Company of Canada, Limited; and American Metal Company of Canada, Limited. The work of the two last-named on the Pine Point Concessions on the south shore of Great Slave Lake is of particular interest.

The production of pitchblende concentrate was continued by the Eldorado Mining and Refining (1944), Limited, a Crown Company, operating at Port Radium on Great Bear Lake. This property is one of the world's principal sources of radium and uranium. Production figures are not available for publication.

Imperial Oil, Limited, continued production of petroleum at Norman Wells in the lower Mackenzie Basin.

The value of mineral production in the Northwest Territories in 1948 was \$4,267,485. The value of gold was \$3,556,875, of silver, \$19,036, and of crude petroleum, \$676,574.

During the fiscal year ended Mar. 31, 1949, 2,139 miners licences, 5,290 quartz grants and 2,474 assignments of mineral claims were issued. In addition, 102 leases comprising 5,947 acres were issued under the Quartz Mining Regulations.

The program of the Geological Survey of Canada in the Northwest Territories in 1948 involved nine field officers and seven map areas. Three topographical survey parties were engaged in the Indin, Giauque and Mathews Lake areas. Four areas aggregating approximately 8,000 square miles were mapped for publication at a scale of 1 inch to 4 miles. A study was made of the east half of the Wecho River map-area lying between the faulted areas of Indin Lake and Yellowknife Bay. Detailed mapping at field scales of 1 inch to 500 or 800 feet was undertaken in three areas containing such properties as Negus, Con Rycon and Giant Yellowknife. In addition to these mapping projects other geological investigations and reconnaissance surveys were undertaken.

An Agent of Federal Lands and Crown Timber, with headquarters at Aklavik, was appointed for that portion of the Northwest Territories north of the Arctic Circle. During 1948-49, 775 surface leases and permits-to-occupy were in effect and 145 timber permits and 17 commercial timber-berth permits were issued. As a result of increased activity at Hay River, a survey of a large addition to the settlement was completed.

Work was completed on the installation of a modern water and sewer system at Yellowknife townsite, where service was provided on a limited scale in December, 1948. Extensions to the systems and construction of a sewage disposal plant were scheduled for completion in 1949. The new public schools at Fort Smith and Yellow-

knife were in operation during 1949 and day schools were under construction at Aklavik, Fort Simpson, Fort Resolution, Coppermine, Coral Harbour, N.W.T. and Chimo, Que.

The Mackenzie Highway, an all-weather gravelled road from Grimshaw, Alta., to Hay River settlement, Great Slave Lake, was completed in 1948. This highway, the cost of which was shared by the Federal Government and the Government of Alberta, enables heavily loaded trucks to convey goods to the south shore of Great Slave Lake for transshipment by water to the various settlements in Mackenzie District. On the return trip, the trucks transport fresh fish from Great Slave Lake.

The fur trade continued to be an important factor in the economy of the Northwest Territories during the year. Although prices were low, a catch of 482,420 pelts worth \$1,872,302 was recorded for the year ended June 30, 1948. Trapping is the chief occupation of the native population, and hunting and trapping in the Northwest Territories are restricted mainly to natives and to half-breeds leading the life of natives.

Considerable progress was made in the organization and development of an improved forest conservation and wildlife protection service. Headquarters is at Fort Smith. Regular patrols are maintained and modern fire-fighting equipment has been provided, and it is anticipated that the improved operations will show satisfactory results in increasing the wildlife resources of Mackenzie District.

The annual Eastern Arctic Patrol, which carries new personnel as well as mail and the year's supplies to Royal Canadian Mounted Police detachments, medical centres, radio and weather stations, trading posts, missions and schools, was carried out in 1949 by a number of small vessels engaged by the Federal Government. A new phase of the Patrol, introduced in 1949, was the inspection by air of conditions in a number of districts. An officer of the Northwest Territories Administration and medical personnel covered both sides of Hudson Bay and parts of Baffin Island on spring and summer flights.

**Recent Developments in Yukon.**—Mining activity was stimulated in Yukon during 1948 by world demand and high prices paid for strategically and industrially required metals. Gold production in that year showed a favourable increase, total production being 60,614 fine oz. valued at \$2,121,490.\* This was an increase of 12,869 oz. over 1947. As in past years, most of this production was obtained from placer operations in the Dawson Mining District. Increased activity was apparent in the base-metal field, particularly in the vicinity of Mayo where United Keno Hill Mines, Limited, established a record production of silver-lead concentrate. In 1948 the silver production of Yukon amounted to 1,718,618 fine oz. valued at \$1,288,964 and lead production to 4,598,665 lb. valued at \$829,599.\*

Yukon Consolidated Gold Corporation, Limited, in the Dawson District, remained the principal producer of placer gold in Yukon in 1948. Operating seven dredges and one dragline, this Corporation recovered 47,538 fine oz. of gold and 9,998 fine oz. of silver. Although a late spring delayed operations, by the end of August, 1949, this Corporation had produced 31,830 fine oz. of gold. Yukon Explorations, Limited, operated one dredge in the Sixty-Mile Creek area and, in addition to a number of individual miners, other companies which produced gold from placer operations were: Reno Gold Mines, Limited; Miller Creek Placers; Clear Creek Placers, Limited; Kluane Dredging Company, Limited; Burwash Mining Company, Limited; and Bates Creek Placers.

\* Later figures than those given at pp. 529 and 532-533.

Interest in quartz mining was stimulated by amendments made to the Yukon Quartz Mining Act which allowed for the grouping of 16 claims at any time before filing assessment work and granting of credit for excess work up to an amount sufficient to qualify for certificates of improvements.

The Mayo Mining District remained the centre of lode mining in Yukon. United Keno Hill Mines, Limited, was the largest producer of base metals, the bulk of its production coming from the Calumet-Hector Mine at Galena Hill. This company's production in 1948 was 1,684,595 fine oz. of silver and 4,332,431 lb. of lead. The Silver Basin Yukon Mines, Limited, a new company, reported satisfactory results from operations at Keno Hill and Galena Hill. Other active companies were the East Bay Mining Company operating at McKay Hill and Yukon Galena Hill Mines, Limited, operating at Keno Hill. In the Whitehorse District, the most active areas for prospecting and development work were in the vicinity of Whitehorse along the Alaska Highway between Teslin, the Liard River and the Hyland Plateau. Western Ranges Prospecting Syndicate, Noranda Mines, Limited, and Great Northern Exploration and Mining Development Company, Limited, carried on development work in this District.

Operations were continued at the Tantalus Butte Coal Mine near Carmacks and 1,535 tons of coal were produced and shipped during 1948.

A mining inspection service was inaugurated under the provisions of the Yukon Mining Safety Ordinance and an inspection of all important mining properties was carried out.

Surface leases and permits-to-occupy in effect Mar. 31, 1949, numbered 69 and 26 land sales were recorded; 179 timber permits and 19 commercial timber berth permits were issued.

The Department of Mines and Resources maintained 21 survey parties in Yukon during the summer of 1948, including 3 Geological Survey, 3 Geodetic Survey, 12 Topographical Survey, and 3 Legal Survey parties. Geological studies of the Whitehorse, Dezadeash, and McQuesten areas were continued and a detailed study of the geology and mineral deposits of Keno and Galena Hills was begun. Roads, mineral claims and private lots were surveyed, and 36 miles of the Yukon-British Columbia Boundary were located and monumented. Topographical Surveys covered over 27,700 square miles by photo-topographical methods for map publication. Parties from the Canadian Army Survey Establishment were also active, and the Royal Canadian Air Force continued its program of aerial photography to assist in mapping the territory.

Maintenance of the Alaska Highway passed from United States authority to the Northwest Highway System (Canadian Army) on Apr. 1, 1946, and restrictions on tourist travel were lifted early in 1948. The Lands and Development Services Branch of the Department of Mines and Resources provided five lunch stops and three overnight camp grounds during 1948 for the accommodation of the travelling public. In 1949 there were 10 overnight camp grounds which had been established by the Department along the Highway in Yukon.

The Federal Government agricultural station on the Alaska Highway, approximately 100 miles west of Whitehorse, continued operations in 1948. Winter varieties of wheat and rye sown in August, 1947, produced an excellent first crop in August, 1948. Poultry and a small herd of dual-purpose cattle were added to the farm stock.

The fur trade continued to be a source of revenue for the inhabitants of Yukon, especially the native population. During the year ended June 30, 1948, the catch numbered 131,227 pelts valued at \$230,117.

### Subsection 2.—Provincial Public Lands

By the Terms of Union which became effective Mar. 31, 1949, Newfoundland and the Coast of Labrador became a province of Canada. All lands in that Province which are not alienated are administered by the Provincial Government. In Prince Edward Island all the land is alienated and there are no provincial public lands. In the other Maritime Provinces and in Quebec, Ontario and British Columbia (except the Railway Belt and the Peace River Block), the public lands have been administered by the Provincial Governments since Confederation. Since 1930, when the Federal Government transferred the natural resources of the Prairie Provinces and of sections of British Columbia, public lands in all provinces have been under provincial administration.

In certain of the provinces extensive areas have been set aside from provincial lands as parks and reserves. These provincial areas are dealt with in Chapter I, pp. 25-31.

Information regarding provincial public lands may be obtained from the following officials of the respective provinces: Deputy Minister of Natural Resources, St. John's, Nfld.; Deputy Minister of Lands and Forests, Halifax, N.S.; Deputy Minister of Lands and Mines, Fredericton, N.B.; Deputy Minister of Lands and Forests, Quebec, Que.; Deputy Minister of Lands and Forests, Toronto, Ont.; Director of Lands, Department of Mines and Natural Resources, Winnipeg, Man.; Director of Lands, Department of Natural Resources, Regina, Sask.; Director of Lands, Department of Lands and Mines, Edmonton, Alta.; Deputy Minister of Lands, Victoria, B.C.

## Section 2.—The Indians and Eskimos of Canada

### Subsection 1.—The Indians of Canada\*

**History.**—A short review of the historical background and economic adjustment of the Indian population appears at pp. 1170 and 1174 of the 1948-49 Year Book.

**Administration.**—The activities of the Indian Affairs Branch† of the Department of Mines and Resources include: management of Indian lands and reserves; trust funds; welfare projects; relief; family allowances; education; descent of property; rehabilitation of Indian veterans on reserves; Indian treaty obligations; enfranchisement of Indians; and a variety of other matters. The organization consists of a headquarters office at Ottawa, with about 100 local agencies in the field, each agency being responsible for one or more reserves and bands.

**Reserves.**—Reserves, or lands set aside by the Federal Government for the use of Indian bands, number more than 2,000. They vary in size from a few acres to 500 square miles. Except by special expropriation for public purposes, these reserves cannot be alienated without the mutual consent of the Government and the Indian owners. All reserve land is community property and the individual

\* Prepared under the direction of D. M. MacKay, Director, Indian Affairs Branch, Department of Mines and Resources, by T. R. L. MacInnes.

† After this material was prepared the Indian Affairs Branch was transferred to the newly organized Department of Citizenship and Immigration, established February, 1950.

holding, in so far as the land is concerned, is only the right of occupation, although the individual holder owns his improvements. Most Indians live on these reserves, which were designed primarily to provide them with a refuge where they could live, move and have their being without fear of exploitation or molestation. In the far north, however, where the lands are unsettled, there is no need for reserves, although the Indians living there are organized into bands and dealt with as band groups for purposes of administration.

## 2.—Indian Lands, by Classes and Provinces, as at Mar. 31, 1948

Province or Territory	Uncleared and Uncultivated	Cleared but not Cultivated	Under Cultivation	Total Area of Reserves <sup>1</sup>
	acres	acres	acres	acres
Prince Edward Island.....	1,320	800	200	2,741
Nova Scotia.....	16,870	999	456	19,429

<sup>1</sup> Includes areas under water and waste lands.

**Treaties.**—From their first contact with the Indians of North America, the British recognized an Indian title or interest in the soil and considered such interest as one to be parted with or extinguished only by formal bilateral agreement. This was the beginning of the system of Indian treaties and surrenders which has been the fundamental basis of Indian policy, both in Canada and the United States. Only about one-half of the Canadian Indian population are actually adherents to formal treaties with the Federal Government. The welfare of Indians not under treaties, however, receives no less attention from the Federal Government on that account.

**Trust Funds.**—Many of the Indian bands have community trust funds which are administered for their benefit by the Indian Affairs Branch. These funds, derived mainly from the sale of natural resources, have increased from some 200,000 in 1870 to more than \$18,400,000 in 1948. They represent the total of approximately 480 separate accounts.

**Education.**—Statistics of enrolment and attendance in Indian schools are given in the Education Chapter at p. 357.

Paralleling the education of Indian children through day-school services are the many and varied adult-education services which are specially designed to encourage economic adjustment of the Indians to modern life. This important work is receiving the close attention of the Department in all settled parts of the country. The policy of the Department and the efforts of the staff are directed towards making the Indians self-supporting.

**Welfare.**—Information about welfare services for the Indians will be found in the Chapter on Health and Welfare at pp. 269-270.

**Handicraft and Home Industries.**—In 1938, a small section of the Indian welfare and training service was established for the purpose of encouraging handicrafts and home industries. Loans from a revolving fund were made available to groups of Indians desiring to produce and market articles made on Indian reserve and assistance was given in securing necessary materials.

In order to build up a stock of various lines and to assist in the setting of standards of quality, all goods produced on organized reserves are sent to a central warehouse at Ottawa. The articles produced are inspected by senior Indian workers on the reserves and carefully inspected again by the departmental craft supervisor when received at the warehouse. In addition to the production of basketry, bark and wooden articles of various types, handicrafts such as metal work and loom weaving are promoted in schools and on reserves.

**Indian Medical Services.**—Information under this heading will be found in the Health and Welfare Chapter at pp. 239-40 of this volume.

**Fur Conservation.**—Almost one-half, or about 60,000, of the Indian population of Canada are still located in the northern and outlying regions and are very largely dependent on hunting and fishing for their livelihood. Their fortunes, therefore, fluctuate with fur catches and prices.

In recent years, the Federal Government has made successful efforts to assist Indian hunters and trappers by fur-conservation and development projects. By arrangements with the provinces, large areas have been set aside as Indian hunting preserves. Fur preserves, used as illustration stations and training grounds, are helping the Indian to practise fur conservation which, in turn, is resulting in annually increasing benefits for participating Indians. Remarkable results have been achieved in these protected areas, particularly with muskrat and beaver.

An area of 425,000 acres in the district surrounding The Pas, Man., has been developed into a highly successful muskrat project. It was started about 1936 as a joint federal-provincial scheme, and for the past seven years has been administered by the Province, subject to the recommendations of the Joint Dominion-Manitoba Fur Advisory Board.

Two beaver preserves in Ontario and five in Quebec, exclusively for Indians, are being administered by the Federal Government in co-operation with the provinces concerned. Two older preserves, on the Nottaway River and in the Abitibi district in the Province of Quebec, produced more than 1,000 beaver each in 1948, realizing an amount in excess of \$100,000 for the trappers. Similar projects are progressing in Saskatchewan and Alberta.

In addition to these community hunting preserves, Indian participation in individually registered trap lines is proving an increasingly important factor in the rehabilitation of the hunting Indian. This system has been evolved because experience has shown that trapping under the former ordinary permit system led to recurring periods of depletion necessitating complete close seasons every few years.

**Revolving Fund Loans.**—Under an amendment to the Indian Act, passed in 1938, the Department of Mines and Resources may grant Revolving Fund Loans to Indian bands, groups, or individual Indians for the purchase of farm implements, machinery, live stock, fishing and hunting equipment, seed grain and materials to be used in native handicrafts. Such loans to individuals are not generally

approved, however, and are considered only under exceptional circumstances. Under this amendment money may be lent for the carrying out of co-operative projects on behalf of the Indians.

**Enfranchisement.**—The Indian Act provides for the enfranchisement of Indians. When an Indian is enfranchised, he ceases to be an Indian under the law and acquires the full rights and responsibilities of Canadian citizenship. Great discretion, therefore, is exercised by the Federal Government in dealing with this problem, as Indians who become enfranchised lose the special protection attached to their Indian status.

### Subsection 2.—The Eskimos of Canada\*

The Eskimos in Canada are found principally north of the tree-line on the northern fringe of the mainland and around the coasts of the islands in the Arctic Archipelago and in Hudson Bay. Most of the Eskimos are coastal dwellers, obtaining much of their food and clothing from the mammals of the sea. However, there are bands of Eskimos living in the interior of Keewatin District, on the west side of Hudson Bay, who are inland people and who subsist chiefly on caribou and fish.

It will be evident that the economy of these nomadic people depends entirely on hunting, trapping and fishing. Hunting produces local food while trapping produces furs to trade for the white man's goods. With variations in the supply of game for either food or fur and the drastic changes in price characteristic of the fur trade, it will be apparent that this is a precarious economy.

The 1941 Decennial Census of Canada established the Eskimo population at 7,639, of which 1,965 were located in northern Quebec. The Eskimo population of Canada, excluding Labrador, was estimated as of December, 1948, to be 8,378.

The Lands and Development Services Branch of the Department of Mines and Resources is charged with the administration of Eskimo affairs. The aims of the administration are:—

- (1) to ensure a sound Eskimo economy;
- (2) to enable the Eskimos to make a wise adjustment to the advance of civilization and to maintain their independence, initiative and integrity in the face of this advance; and
- (3) to give them full opportunity to develop to the stage where they can assume the full rights and responsibilities of citizenship.

The question of the ability of wildlife resources to support the native population is becoming an acute problem. To conserve the natural resources necessary for the subsistence of the Eskimos, the Administration has introduced game preserves where only natives may hunt and trap. In addition, game regulations provide for the efficient use of wildlife, and the Royal Canadian Mounted Police encourage hunting practices which will conserve the supply of game both on land and in the sea. The Federal Government has for a number of years operated a reindeer project near Aklavik, which was undertaken primarily as a possible means of improving the economic condition of the Eskimos. Research is going on to determine the suitability of other areas for reindeer culture and to determine the possibility of developing other resources, such as fisheries, thus broadening the native economy.

\* Prepared under the direction of R. A. Gibson, I.S.O., Director, Lands and Development Services Branch, Department of Mines and Resources. After this material was prepared this Branch was transferred (February, 1950), as the Development Services Branch, to the newly created Department of Resources and Development.

Social services available to the citizens of Canada in general are being extended to the Eskimos as rapidly as possible, care being taken that these services are extended in a manner and form conducive to the best interests of the native. Family allowances to Eskimos are issued in the form of goods and an allowance to aged Eskimos has also been authorized. (See pp. 270-271.)

Medical care and hospitalization of the Eskimos is a function of the Department of National Health and Welfare. Missionary hospitals, maintained with government assistance, are located at Aklavik, Chesterfield Inlet and Pangnirtung. At these points the Department of National Health and Welfare also maintains medical health officers, who are responsible for the surrounding areas. Government nursing stations or health centres are being established at strategic points. (See pp. 239-240.)

The nomadic life of the Eskimo people places considerable difficulty in the way of formal education. For many years the missionaries have carried on some formal education assisted by Federal Government grants. Considerable attention is being devoted to devising a suitable educational program for the Eskimos, and schools staffed by welfare teachers are being established, sometimes in conjunction with the nursing stations.

In order to maintain close contact with the Eskimos, the Royal Canadian Mounted Police detachments throughout the far north act as local representatives of the administration in all matters affecting Eskimo welfare. Administrative contact is also maintained by radio and through the Eastern Arctic Patrol, which carries representatives of the administration and of other government departments on an annual inspection of conditions in the Eastern Arctic.

### Section 3.—Department of the Secretary of State\*

The Department of the Secretary of State was constituted in its present form in 1873, through the merging of the previously existing offices of the Secretaries of State for Canada and for the provinces. The Secretary of State is the official spokesman of the Federal Government, as well as the medium of communication between the Federal and Provincial Governments, all correspondence between the Governments being conducted by him with the Lieutenant-Governors. He is the custodian of the Great Seal of Canada and the Privy Seal as well as being the channel by which the general public may approach the Crown.

The Secretary of State is also the Registrar General, registering all proclamations, commissions, licences, warrants, writs and other instruments issued under the Great Seal and the Privy Seal. He is further charged with the administration of the Companies Act, the Patent Act, the Copyright Act, the Canada Temperance Act, the Boards of Trade Act, the Trade Unions Act, the Department of State Act, the Timber Marking Act, the Trade Marks and Design Act, the Public Officers Act, the Unfair Competition Act (1932), the Translation Bureau Act, the Shop Cards Registration Act, the Seals Act, the Public Documents Act, the Reparation Payment Act, the Trading with the Enemy (Transitional Powers) Act, the Canadian

\* Revised under the direction of the Under Secretary of State, Department of the Secretary of State.

Citizenship Act, Treaties of Peace Acts, and with the collection and tabling of parliamentary returns. Other legislation imposes incidental duties on the Department. The Secretary of State deals with the organization and administration of the Office of the Custodian of Enemy Property (see the 1945 Year Book, p. 475). Statistics regarding patents and copyrights are given at pp. 886-887 of this volume.

### Subsection 1.—Incorporation of Federal Companies

Statistics of companies incorporated under the Companies Act are given in Table 3.

### 3.—Numbers and Capitalizations of Companies Incorporated under the Dominion Companies Act and Amendments, Years Ended Mar. 31, 1942-48

NOTE.—Statistics for the years 1900-25 will be found at p. 1061 of the 1938 Year Book and for 1926-41 at p. 934 of the 1942 edition. Capitalization includes consideration of the amounts of capital received on the issue of shares without nominal or par value.

Year	New Companies		Old Companies with—				Gross Increase in Capitalization	Net Increase in Capitalization
			Increased Capitalization		Decreased Capitalization			
	No.	Capitalization	No.	Amount	No.	Amount		
		\$		\$		\$	\$	\$

During the year ended Mar. 31, 1948, 153 Supplementary Letters Patent were granted for variation of corporate powers, changes of name, confirmation of compromises or arrangements with shareholders and for various other purposes. In addition to the companies with share capital, 36 corporations without share capital were granted Letters Patent under Part II of the Companies Act, 1934.

### Subsection 2.—Citizenship\*

On Jan. 1, 1947, the Canadian Citizenship Act came into force. By this legislation all previous naturalization Acts in force in Canada were repealed; this included the Canadian Nationals Act, R.S.C. 1927, c. 21. The purpose of the Citizenship Act is to give a clear and simple definition of Canadian citizenship and to provide an underlying community of status for all the people of Canada that will help to bind them together as Canadians. Heretofore, the only definition of Canadian citizenship was to be found in the Immigration Act, and that was a limited one, for it defined citizenship for purposes of immigration only. The 1947 legislation is summarized at pp. 1178-1184 of the 1948-49 edition of the Year Book.

\* Since this material was prepared the administration of matters concerning Canadian citizenship has been transferred to the Department of Citizenship and Immigration, established February, 1950.

The following statements show the number of citizenship certificates granted in each year since the Canadian Citizenship Act came into force and the nationality of the recipients of these certificates.

### I.—CITIZENSHIP CERTIFICATES GRANTED TO CANADIAN-BORN AND OTHER BRITISH-BORN CITIZENS, 1947-49

Section of Act	Classification	1947	1948	1949
		No.	No.	No.
Sect. 39 (i) <sup>1</sup>	Certificates of proof of citizenship issued to Canadians—			
	(a) Canadians by birth.....	2,753	1,828	2,125
	(b) Canadians by naturalization.....	4,933	3,626	3,719
	(c) Canadians by marriage (wives).....	841	1,564	1,775
	(d) Canadians by residence (British subjects).....	3,533	2,030	1,992
Sect. 10 (2) <sup>2</sup>	British subjects.....	12	80	148
Sect. 10 (3) <sup>3</sup>	Minors whose parents have been granted Certificates...	85	236	283

### Section 4.—The Civil Service of Canada\*

In the widest sense the Federal Civil Service comprises all servants of the Crown—other than those holding political or judicial office—who are employed in a civil capacity and whose remuneration is paid wholly and directly from moneys voted by Parliament. Collectively, they form the staffs of the various departments, commissions, boards, bureaus, and other agencies of the Federal Government. Nearly every category of occupation is represented in the Civil Service, and personnel are further differentiated in terms of the authority under which appointments are made. A few are appointed by either or both Houses of Parliament directly, a number by departments and other agencies in accordance with the provisions of certain statutes, generally with executive approval of the Governor in Council, and the remainder—by far the majority—are selected and appointed by the Civil Service Commission.

As the central personnel agency of the Federal Government, the Civil Service Commission is the custodian of the "merit principle" in respect of both initial appointments and promotions. The steps by which the Commission, in its present form, came to be constituted is the record of Civil Service reform in Canada which began a year after Confederation and culminated in the passing of the Civil Service Act of 1918. Successive Royal Commissions deliberated on the problem of creating an effective and efficient working force and from their findings and recommendations emerged the concept of a quasi-judicial body, with a large measure of autonomy and with jurisdiction over nearly the whole of the public service.

**Recruitment.**—The recruitment of civil servants is conducted by means of open competitive examinations. In the past 30 years over 1,000,000 applicants for civil service posts have been examined by the Commission. Examinations are held periodically as the staff requirements of the public service dictate. Positions located throughout the country are treated in the same manner as positions at Ottawa, but applicants for local positions must be bona fide residents of the locality in each case, whereas any Canadian citizen is entitled to apply for positions open at Ottawa. Competitive examinations are announced through the public press and through posters displayed on the public notice boards of post offices, offices of the National Employment Service, offices of the Civil Service Commission, public libraries and elsewhere.

The relative capacities of applicants are measured by objective tests designed and applied by the Commission. The nature of the test varies with the class of position and it may be of the written or the oral type, or a combination of the two. For certain classes of positions ratings are based entirely on the education and experience of applicants as given on their application forms. In some cases a demonstration of skill may be required.

The names of persons successful in civil service examinations, arranged in order of rank, are recorded on eligible lists. Examination results are formally announced by publication in the *Canada Gazette* and each candidate—successful or unsuccessful—is advised of his standing. As required, appointments are made from the eligible lists, which remain valid for one year.

The statutory preference which existed for veterans of the First World War was extended to veterans of the Second World War and proved to be a major factor in occupational rehabilitation. In the period May, 1945, to December, 1948, approximately 50,000 veterans were appointed to civil service positions. The figure represents approximately 75 p.c. of all male appointments in the period.

\* Revised by the Secretary of the Civil Service Commission, except where otherwise indicated.

In recent years the Civil Service Commission has decentralized its operations and now has ten district offices and four sub-offices across the country. The Commission is granting an increasing measure of autonomy and responsibility to these offices to permit better immediate service to field agencies of Government departments.

**Promotions.**—It is a prime object of the Civil Service Act to create a career service. The result is that promotion, like entrance, is based on merit and a sound promotion system is developing. It has been the recent practice to widen the area of promotional competitions to ensure that the better employees throughout the public service receive proper recognition.

**Position Classification and Compensation.**—Provision is made in the Civil Service Act for the classifying of positions in the public service. A system of position-classification was instituted in 1919 and all positions with like duties and responsibilities were classified alike and remunerated equally. Through the years the original classification has been extensively revised, many new classes added and others discontinued as the administrative programs and practices of Federal Government departments have evolved. The determination of rates of compensation for each class is a continuing responsibility of the Commission and salary and wage surveys are conducted constantly. Position-classification is a mainspring in the Commission's primary function of recruitment, involving, as it does, the fixing of standards of qualification for each class of position.

The classification structure has been simplified in the past few years by virtue of a substantial reduction in the number of position-classes and a thorough overhaul of the wage pattern. The Commission has also recommended a series of service-wide salary adjustments that have tended to keep the public service abreast of changing economic conditions. The most recent of these recommendations was approved in 1948.

**Organization and Methods.**—Under the terms of the Civil Service Act, the Commission is made responsible for investigating and reporting to the Governor in Council on all matters affecting the organization of departments. In this respect the Commission acts as agent for the executive arm of government which maintains a constant check on the growth of establishments. In addition to the annual scrutiny of estimates by Parliament, departments are required to submit for approval all projected staff increases before engaging additional personnel. Under established financial practice, authority to release the funds required to meet such commitments is retained by the Governor in Council. Since the administrative machinery must frequently be adjusted, quantitatively and qualitatively, to meet changing conditions, the Commission is continuously engaged in the study of staffing problems throughout the public service.

In recent years there has been an increasing awareness of the extent to which economical administration depends on the adoption of modern management techniques and devices. In recognition of this the Commission set up, in 1948, an Organization and Methods Division to study problems of management in collaboration with officials directly responsible for major areas of administration. Briefly, it is the business of this Division to afford practical assistance to departments and other agencies of the Government through the systematic examination of the structure and operations, and the procedures and work methods employed in their

various branches, divisions and sections, and to engage in such other related studies as will contribute to the progressive improvement of public management as a whole. Its growing facilities are offered, free of charge, to all departments.

**Staff Training.**—Systematic in-service training of departmental staffs aimed at increasing the general efficiency of the Civil Service is a comparatively recent development in the field of personnel management. It was only in 1947 that a Staff Training Division was established in the Commission to promote and guide a service-wide scheme. This followed upon and supplanted a more modified training program carried out by the Department of Labour in the three preceding years. In this five-year period, however, about 50,000 employees—approximately one-half the civil servants under the jurisdiction of the Civil Service Act—have participated in one phase or another of the training program.

The training scheme sponsored by the Commission is a joint venture undertaken in co-operation with Federal Government departments, most of which have parallel training divisions. The Commission's Staff Training Division is primarily a co-ordinating agent. It promotes and organizes training activities; trains departmental instructors in the presentation of courses; prepares and, in some cases, gives courses of general application to all departments; publishes booklets and other training aids; assists departments in developing training to meet specialized needs; and acts as a general clearing-house for the exchange of information on training matters. It also co-ordinates the purchase and distribution of training films and advises departments on the organization, staffing and administration of training divisions.

**Civil Service Statistics.\***—Since April, 1924, a monthly return of personnel and salaries has been made by each department of the Federal Government to the Dominion Bureau of Statistics, according to a plan that ensures comparability between departments and continuity in point of time. The institution of this system was preceded by an investigation covering all years following 1912.

From 1914 to 1920, the number of employees increased very rapidly as a result of the extension of the functions of government and of the imposition of new taxes which necessitated additional officials as collectors. New services, such as the Department of Pensions and National Health and the Soldier Settlement Board, were also created during this period. In January, 1920, 47,133 persons were employed; this number was the highest reached prior to January, 1940, when employees numbered 49,739.

Between March, 1939, and March, 1949, there was an increase of 77,818 in the total number of permanent and temporary employees. The bulk of this increase was accounted for as follows: Department of National Defence, 20 p.c.; Department of National Revenue, 15 p.c.; Post Office Department, 7 p.c.; Comptroller of Treasury, 4 p.c.; Department of Transport 4 p.c.; Department of Agriculture, 4 p.c.; Public Works Department, 3 p.c.; Unemployment Insurance Commission, 9 p.c.; and 17 p.c. in Veterans Affairs and Soldier Settlement and Veterans' Land Act Departments combined.

In March, 1949, the number of permanent employees represented 31 p.c. of the total number of civil servants as compared with 70 p.c. of the total in March, 1939, and 66 p.c. of the total in March, 1925. Similarly, temporary employees

\* Revised in the Public Finance Division, Dominion Bureau of Statistics.

represented 69 p.c. of the total as compared with 30 p.c. of the total in March, 1939, and 34 p.c. of the total in March, 1925, the first year for which these statistics were published.

The following sequence of tables is condensed from a recently published historical series covering the years 1938 to 1949.

#### 4.—Numbers and Percentages of Permanent and Temporary Civil Service Employees, Months of March, 1938-49

## Section 5.—Supervision of Race-Track Betting

The supervision of race-track betting, under the pari-mutuel system, has been under the jurisdiction of the Minister of Agriculture since it first operated during the racing season of 1921. The actual supervision is carried out by officers of the Royal Canadian Mounted Police. Table 11 brings the data up to the year 1948.

## 11.—Race-Track Betting in Canada, Years Ended Mar. 31, 1939-48 and by Provinces, 1947 and 1948

# CHAPTER XXX.—SOURCES OF OFFICIAL STATISTICAL AND OTHER INFORMATION RELATIVE TO CANADA

## CONSPECTUS

	PAGE		PAGE
SECTION 1. SOURCES OF FEDERAL GOVERNMENT INFORMATION.....	1170	SECTION 3. ACTS ADMINISTERED BY FEDERAL DEPARTMENTS.....	1196
SECTION 2. DIRECTORY OF SOURCES OF OFFICIAL INFORMATION FOR ALL DEPARTMENTS (FEDERAL AND PROVINCIAL) .....	1174	SECTION 4. FEDERAL AND PROVINCIAL ROYAL COMMISSIONS.....	1201

## Section 1.—Sources of Federal Government Information\*

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the decennial and quinquennial censuses are planned and statistical information of all kinds—federal and provincial—is centralized. In regard to information that is not mainly statistical the individual Departments concerned with the particular subject, as indicated in the Directory at pp. 1176-1195, should be approached. Certain Government bodies and national agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are: the Information Division, Department of External Affairs, which deals with questions about External Affairs originating in Canada and with general requests for information on Canada and Canadian affairs, originating abroad; the Publicity Division, Department of Trade and Commerce; the Information Services Division, Department of National Health and Welfare; the Canadian Broadcasting Corporation; and the National Film Board. The Departments of Agriculture, Resources and Development and Mines and Technical Surveys, while not thus classed, are interested in the dissemination of information to a greater extent than most other Government Departments, and several other Departments have Publicity Branches or Public Relations Divisions. These services are described below.

Government Departments, with few exceptions, issue their own lists of reports and publications. They must, according to statute, publish annual reports which are tabled each year in the House of Commons by their respective Ministers. However, for the purpose of this Section, the descriptions given below are limited to the six information services specified in the first paragraph above. Section 2, on the other hand, has been prepared with the purpose of presenting to the reader a directory of all sources of information, federal and provincial, and thereby directing the reader who is not in touch with governmental organization to the proper channels from which he can draw material relating to any particular subject.

**The Dominion Bureau of Statistics.**—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43).† The Act was a consolidation of all previous statistical legislation

\* Revised in the Divisions mentioned in the text of this Section.

† This statute, consolidated as the Statistics Act (R.S.C., 1927, c. 190) was repealed and replaced by the Statistics Act, 11-12 Geo. VI, c. 45.

and was based on the report of a Commission on Statistics, appointed in 1912, which recommended (1) a series of specific reforms and enlargements in Canadian statistics, and (2) a policy of statistical co-ordination for Canada, under central direction. In 1915, following the recommendations in this Report, the office of Dominion Statistician was created but it was not until 1918 that the recommendations of the Commission were embodied in legislation.

The chief aims of the Dominion Bureau of Statistics are:—

- (1) to furnish factual data for administration and government;
- (2) to assist in developing Canada as a well-informed nation by standing ready to help business men and individuals to plan their enterprises and their lives.

It is in regard to the second of these aims that this review is concerned.

*Inquiries.*—Hundreds of individual requests for information are received in the Bureau each day, routed through the appropriate divisions and answered as expeditiously as possible. Since the field of effort, from the statistical side, deals with all phases of the national economy, there is scarcely a subject upon which the Bureau is not able to give some information. Nevertheless, inquiries of a statistical nature only should be directed to the Dominion Bureau of Statistics.

*Publications.*—The Dominion Bureau of Statistics is the largest publishing Department of the Federal Government: the subjects of its reports cover all aspects of the national economy. The appropriation for the Bureau, passed by Parliament each year, provides limited funds for the printing and processing of reports and bulletins. Reports printed from type are set up by the King's Printer, but all processed reports and bulletins are completely printed and published by the Dominion Bureau of Statistics.

The policy with regard to the distribution of publications is based on sales to the public at actual cost of paper and press-work only; compilation, editing and other overhead costs are not included. The object is to extend the service to the public as widely as possible and so spread the compilation and overhead, which are the big items in total costs. A special subscription rate of \$30 per annum entitles the subscriber to receive a copy of each publication, including News Bulletins, as issued. Statistical information not of general interest is published as Reference Papers or Memoranda and an additional subscription rate of \$10 is made for each category: this entitles the subscriber to receive all issues in each class. A discount of 25 p.c. is allowed on the excess over \$5 of single purchases totalling between \$5 and \$20: on single purchases of between \$20 and \$50 the discount is 50 p.c. of the excess over \$20.

A complete list of Bureau publications is available from the Dominion Statistician, on request. Orders for reports should be sent to the Dominion Bureau of Statistics, Ottawa, and should give the correct title or titles of the publication or series of reports in which the applicant is interested and include the necessary remittance in the form of a cheque or money-order made payable to the Receiver General of Canada, Ottawa.

**Information Division, Department of External Affairs.**—The task of this agency is to make Canada better known abroad and to encourage interest in and understanding of international affairs within Canada.

The Division prepares for Canadian Missions abroad—Embassies, Legations, Consulates and Trade Commissioners' Offices—a regular supply of information material on developments in Canada. Reference papers, booklets, features, photographs and other graphic material dealing with Canada thus are distributed throughout the world. Information Officers are attached to the staff of Canadian Missions at New York, London, Washington, Paris and Canberra.

The Division maintains an Enquiries Section at Ottawa to deal with questions about Canada received from abroad and questions on international affairs received from within Canada. The Division offers special facilities to journalists, writers and commentators visiting Canada, and for Canadian speakers abroad. It supervises the departmental library and takes a special interest in Canada's cultural relations abroad.

Domestically, the Division is responsible for departmental press conferences, press releases, handling of press inquiries and for the provision of information relating to external affairs and the work of the Department. It also co-ordinates the activities of all Canadian Government agencies engaged in and interested in disseminating Canadian information abroad. It is normally responsible for Canadian information arrangements at international conferences both in Canada and elsewhere.

**Publicity Division, Department of Trade and Commerce.**—Information, pertaining specifically to trade, is obtainable from this Division, which maintains close liaison with all Branches and Divisions of the Department and with a number of Crown companies. It is responsible for production of "Foreign Trade", the weekly publication of the Foreign Trade Service, and for the preparation of brochures, some of which are required for distribution at trade fairs in other countries. Information is made available to Canadian Trade Commissioners for distribution within their respective territories, including the provision of motion picture films. The Division is closely identified with the Canadian International Trade Fair, although promotional literature is distributed directly from the headquarters of that organization at Toronto.

**Information Services Division, Department of National Health and Welfare.**—The responsibility of this Division, in co-operation with other divisions of the Department of National Health and Welfare and provincial authorities, is the production and distribution of educational materials on health, welfare and social security, for use in Canada and abroad. These materials, issued in both English and French, include books, pamphlets, periodicals, posters, exhibits, displays, radio dramatizations and press releases, as well as films and film-strips prepared in co-operation with the National Film Board. With the exception of periodicals, these are distributed in Canada through provincial authorities. Distribution to other countries is mainly through the Department of External Affairs or, in quantity, the King's Printer. The most important periodicals published by the Division are "Canada's Health and Welfare" (monthly), "Canadian Nutrition Notes" (monthly), "Industrial Health Bulletin" (monthly), "Industrial Health Review" (twice yearly) and "Nutrition Bulletin" (annually).

**Canadian Broadcasting Corporation.**—Radio broadcasting is an important means of giving information to the public along with newspapers, films and other means of communication. Radio broadcasting in Canada is a combination of a publicly owned national system and privately owned local community stations, many of which are affiliated with the Canadian Broadcasting Corporation's networks.

Since its establishment in 1936, the Canadian Broadcasting Corporation has become one of the most effective channels through which information, official and unofficial, is broadcast to the Canadian people. Radio is relatively more important in Canada than in most other countries, because of the widely distributed population and the number of sparsely peopled areas, and the CBC has gradually bridged the gaps with high-powered transmitters designed to serve rural as well as urban areas. It has also pioneered in the development of low-powered repeater stations attached to the network lines, and which serve areas unable because of topographical conditions to receive an adequate signal from any existing station.

News broadcasts and information programs occupy a considerable proportion of national and regional network time. These include news, drama, informative talks, children's programs, school broadcasts, public-service broadcasts, sports, women's activities, etc. Canadian listeners have a very wide range of radio fare, since the CBC not only produces its own programs in the various production centres across Canada, but brings in selected programs from the networks in the United States, the British Broadcasting Corporation, and other national radio systems. The CBC maintains a bureau at London, England, and at United Nations Headquarters, and is credited with having done more to inform its listeners of United Nations activities than any other broadcasting system.

Through the International Shortwave Service operated by the CBC on behalf of the Federal Government, programs are broadcast in twelve languages: English, French, Czech, German, Dutch, Norwegian, Danish, Swedish, Italian, Russian, Portuguese and Spanish. Through the activities of the CBC International Service, information on life in Canada and on economic conditions is broadcast abroad as part of the general information plan for promoting a better understanding of Canada in other countries. Since the CBC shortwave transmitters at Sackville, N.B., have the strongest signal reaching Europe from this side of the Atlantic, the transmitters are made available to United Nations radio, free of charge, for regular transmissions.

**National Film Board.**—The National Film Board produces and distributes photographs, photo stories, newsreels, film-strips, displays, posters, silk-screen prints and other visual media on all aspects of Canada—its landscape, resources, industries, agriculture, and the national life and character of the people.

The Film Production Branch is fully equipped with all the necessary technical facilities for the production of films. Theatrical and non-theatrical short subjects are made for other government departments and from the production appropriation of the Board. These films portray progress and development in the economic, social, political and cultural life of Canada. The National Film Board in its ten

years of operation has produced more than 2,500 films. A central photograph library containing more than 60,000 active negatives and a photo laboratory serves all government departments.

The National Film Board's technicians keep abreast of developments in colour production, stereoscopic films and television. Many Canadian films are featured on television programs in the United Kingdom and other countries.

The Board's films and other productions are widely distributed in the United States, the United Kingdom, Australia, Central and South America and other countries through the Board's offices at New York, Chicago and Washington in the United States; Mexico City, Mexico; Sydney, Australia; and London, England; and through Canadian trade and diplomatic offices. For travel films the Board has established 62 outlets in 35 states in the United States. Other distribution channels are through newsreel companies, commercial theatres and government and other non-theatre film circuits. In all, distribution of the Board's productions was carried out in 58 countries during 1948.

In Canada, films are distributed by the Distribution Branch through regional offices in each of the ten provinces. One or more productions are released every month to theatres across the country. Non-theatrical films reach over 3,300 communities through a field staff of 70, through self-operating circuits and 235 film libraries. Community film activity is co-ordinated by 250 film councils and classroom and adult education programs by provincial agencies.

## **Section 2.—Directory of Sources of Official Information for All Departments (Federal and Provincial)**

To make best use of the Directory, it is necessary that the reader understand broadly the differences in function between federal and provincial departments and their separate fields of work.

Certain fields of effort, such as Trade and Commerce, Customs and Excise, Currency and Banking, Navigation, Transportation, Radio, Census of Population, National Defence, etc., are constitutionally federal matters and in such fields the respective departments at Ottawa are the proper sources with which to communicate. While other fields of effort such as the administration of lands and natural resources, education, roads and highways, and health and hospitals are the responsibility of the provinces under the British North America Act, certain federal departments are also concerned with specific aspects of these subjects and, as is the case with the Dominion Bureau of Statistics, in co-ordinating and presenting the material for Canada as a whole.

As a general guide to the public, it may be pointed out that questions relating to the actual development and administration of resources should be forwarded to the particular provinces concerned. The Federal Government, while not administering the resources within provincial boundaries, co-operates closely with the provinces and is in a position to furnish material for Canada, especially production data, on a national basis, marketing data on international, national and provincial

bases, research work and experimental station data on a national basis, and also on a provincial basis from Federal Government stations located within particular provinces. In agriculture, for instance, data on the breeding of live stock and the improvement of strains, on agricultural marketing and crop yields are cases in point—in forestry, questions of forest research, forest fire protection and reforestation offer good examples. Where inquiries are directed to federal sources, they should, as a general rule, be sent to the individual departments listed in the Directory for information not of a statistical nature but, whatever the subject, where the information required is clearly statistical, they should be addressed to the Dominion Bureau of Statistics.

Bearing these points in mind, the reader will be able to apply the information given in the Directory to best advantage.

In the Directory, symbols are set against individual sources of information to give special information such as availability of detailed lists of publications, the costs of such lists (in cases where a charge is made), or information of other kinds. All departments whether federal or provincial are prepared to furnish, by letter or otherwise, information in their respective fields, free of charge although, where special compilations are called for, a nominal charge is sometimes made.

The address for all federal departments is Ottawa, Ontario. Inquiries forwarded to provincial departments should be addressed to the provincial capitals concerned:—

Newfoundland.....	St. John's
Prince Edward Island.....	Charlottetown
Nova Scotia.....	Halifax
New Brunswick.....	Fredericton
Quebec.....	Quebec
Ontario.....	Toronto
Manitoba.....	Winnipeg
Saskatchewan.....	Regina
Alberta.....	Edmonton
British Columbia.....	Victoria

The King's Printer, Ottawa, publishes an Official List of all Federal Government publications printed from type. This list, which may be obtained on application, is revised at regular intervals and is classified on a subject basis, as well as being adequately cross-referenced. Most federal and provincial departments that edit near-print publications (either in mimeographed or rotaprinted form) issue lists of this material free to the public and very often such lists include the printed publications published by the same departments, and available through the King's Printer.

Inquiries about Yukon and the Northwest Territories should be addressed to Ottawa.

# DIRECTORY OF SOURCES OF OFFICIAL INFORMATION

▲ Most publications of federal departments printed from type are purchasable from the King's Printer who publishes current list. Photographs, films and displays may be purchased from the National Film Board at prices obtainable on application. Most Provincial Government printed publications may be obtained from the King's Printers of the province. For addresses of Provincial Governments see text immediately preceding this Directory.

- ☐ Near-printed and mimeographed reports free or purchasable from this department or branch; particulars on application
- ☐ Directory of departmental organizations and activities available from the federal or provincial department on request
- List of publications available free of charge on request from federal or provincial departments concerned. (In the case of the federal Labour Department a list of publications is given in the *Labour Gazette*.)

## Section 2.—Federal Legislation

### Legislation of the Fifth Session of the Twentieth Parliament, Jan. 26, 1949, to Apr. 30, 1949

NOTE.—This classified list of Federal Legislation has been compiled from the Statutes. Naturally, in summarizing material of this kind it is not always easy to convey the full implications of the legislation. The reader who is interested in any specific Act is, therefore, referred to the Statutes. Adequate references are given in this summary.

Chapter and Date of Assent	Synopsis
13 George VI.	
<b>Agriculture—</b>	
8 Mar. 30	<i>An Act to Amend The Agricultural Products Act.</i> The amendment provides for continuance of the provisions of The Agricultural Products Act until Mar. 31, 1950.
10 Mar. 30	<i>An Act to Amend The Cheese and Cheese Factory Improvement Act.</i> The amendment provides penalties for violation of the regulations governing grants on graded cheese as set out in The Cheese and Cheese Factory Act.
16 Apr. 30	<i>The Agricultural Products Marketing Act.</i> The Act provides for the granting of authority to Provincial Boards to exercise powers of regulation in relation to the marketing of agricultural products inside and outside the province.
<b>Communications—</b>	
13 Mar. 30	<i>An Act to Amend The Mail Contracts Supplemental Payments Act.</i> This amendment authorizes the incorporation of supplementary payments in the renewal of mail contracts.
<b>Constitution and Government—</b>	
1 Feb. 18	<i>An Act to Approve the Terms of Union of Newfoundland with Canada.*</i> This Act authorizes (as stated in the Schedule attached to the Act) the Terms of Union whereby Newfoundland forms part of Canada and becomes a province thereof.
<b>Finance—</b>	
2 Mar. 25	<i>An Act to Amend The Canadian Commercial Corporation Act.</i> This amendment authorizes the Minister of Finance to advance, out of unappropriated moneys in the Consolidated Revenue Fund, loans to the Corporation not to exceed \$10,000,000, and authorizes the Corporation to retain all moneys received by it subject to the repayment of the loans. The Corporation is also authorized to recover operation expenses.
4 Mar. 25	<i>An Act to Amend The Foreign Exchange Control Act.</i> By this amendment the Foreign Exchange Control Act is continued in force until 60 days after the commencement of the First Session of Parliament, 1951.
7 Mar. 25	<i>The Appropriation Act, No. 1, 1949.</i> This legislation provides for payment of moneys out of the Consolidated Revenue Fund for the Public Service according to attached Schedules A, B and C of the Act and provides for the raising of moneys for the redemption of loans or obligations maturing Mar. 31, 1950.

\* Proclaimed Apr. 1, 1949. See *Canada Gazette*, Apr. 23, 1949, pp. 1495-1504.

**Legislation of the Fifth Session of the Twentieth Parliament,  
Jan. 26, 1949, to Apr. 30, 1949—concluded**

Chapter and Date of Assent	Synopsis
<b>Finance—concl.</b>	
14 Apr. 1	<i>The Appropriation Act, No. 3, 1949.</i> This legislation provides certain sums of money for the Public Service as set forth in the Supplementary Estimates (Newfoundland), for the financial year ended Mar. 31, 1950.
15 Apr. 7	<i>The Appropriation Act, No. 2, 1949.</i> This legislation provides certain supplementary funds for the Public Service for the financial year ended Mar. 31, 1949, according to Schedule attached to the Act.
21 Apr. 30	<i>The Appropriation Act, No. 4, 1949.</i> The Act provides certain sums of money for the Public Service for the financial year ended Mar. 31, 1950, based on the Main Estimates as contained in Schedules A and B and C, and Supplementary Estimates (Newfoundland) in Schedule D as appended to the Act.
<b>Justice—</b>	
6 Mar. 25	<i>The Statute Law Amendment (Newfoundland) Act.</i> This legislation interprets Statute Law as applicable to Newfoundland.
18 Apr. 30	<i>An Act to Amend The Judges Act, 1946.</i> This amendment provides for salaries for an added number of puisne judges of the Superior Court of Quebec.
<b>Mines and Resources—</b>	
5 Mar. 25	<i>The National Parks Amendment Act, 1949.</i> The amendment redefines the boundaries of Banff and Elk Island National Parks and renames the New Brunswick National Park as Fundy National Park.
20 Apr. 30	<i>The Pipe Lines Act.</i> Enacts enabling legislation concerning construction, operation, regulation, etc., of gas and oil pipe lines.
<b>Trade and Commerce—</b>	
12 Mar. 30	<i>An Act to Amend the Game Export Act.</i> The amendment redefines the term "game officer", repeals the clause providing the oath of a game officer and rescinds his powers as justice of the peace or police constable.
<b>Transportation—</b>	
9 Mar. 30	<i>An Act Respecting the Appointment of Auditors for National Railways.</i> The Act authorizes, for the year 1949, the appointment of independent auditors to make a continuous audit of the National Railways.
<b>Welfare—</b>	
17 Apr. 30	<i>An Act to Amend The Family Allowances Act, 1944.</i> The amendment reduces the residence requirements, for child recipients of benefits under the Act, from three years to one year and repeals the proviso reducing the amounts payable in respect of a fifth or subsequent child.
19 Apr. 30	<i>An Act to Amend the Old Age Pensions Act.</i> This amendment extends from \$30 to \$40 the limits within which the Federal Government can make contribution of 75 p.c. to the provinces for Old Age Pensions.
<b>Miscellaneous—</b>	
3 Mar. 25	<i>An Act to Amend The Continuation of Transitional Measures Act, 1947.</i> The amendment provides for the date of expiration of the Act and restricts the powers of the War-time Prices and Trade Board.
11 Mar. 30	<i>An Act to Repeal the Cullers Act.</i> Legislation respecting the culling and measuring of lumber in the Provinces of Ontario and Quebec is repealed.

## APPENDIX I

### Chronology

*(In continuance of the Chronology at pp. 75-82 of this volume.)*

1949. Sept. 7-12, Financial and economic conference of representatives of the United Kingdom, the United States and Canada held at Washington, D.C., to examine trade and financial relationships between the Sterling Area and the Dollar Area; Hon. D. C. Abbott represented Canada. Sept. 15, First Session of the 21st Parliament of Canada opened—the first Parliament at which Newfoundland was represented. Sept. 17, First meeting of the Council established by the North Atlantic Treaty convened at Washington, D.C.; Hon. L. B. Pearson represented Canada. S.S. *Noronic* burned at Toronto with heavy loss of life. Sept. 18, Sir Stafford Cripps, Chancellor of the Exchequer of the United Kingdom, announced devaluation of the pound sterling from \$4.03 to \$2.80. South Africa, Australia, New Zealand, India, Ireland, Norway, Denmark, Egypt and Israel also devalued their currencies. Sept. 19, Hon. D. C. Abbott announced devaluation of Canadian dollar by 10 p.c. Sept. 20, Fourth Session of the General Assembly of the United Nations convened at Flushing Meadows, N.Y.; Hon. L. B. Pearson elected chairman of the Political Committee. Sept. 21, End of military government in Germany. Sept. 22, Dominion Transport Board sanctioned increase in railway freight rates. Sept. 30, Berlin airlift ended officially at midnight. Oct. 23-26, Visit to Ottawa of Pandit Jawaharlal Nehru, Prime Minister of India. Nov. 21, Kellock Report on the circumstances attending the loss of the S.S. *Noronic* tabled in the House of Commons. Dec. 10, An Act to Amend the Supreme Court Act, giving final authority in judicial matters to the Supreme Court of Canada, received Royal Assent. The Act came into force on proclamation, Dec. 23, 1949. Fourth General Assembly

of the United Nations, held at Flushing Meadows, N.Y., ended. Prorogation of the First Session of the 21st Parliament, Dec. 12, Mrs. Nancy Hodges named Speaker of the British Columbia Legislature, the first woman to hold the office of Speaker in a Commonwealth legislature. Dec. 16, Royal Assent given to Bill amending the British North America Act by vesting in the Parliament of Canada, without reference to the British Parliament, the power to make amendments to the constitution of Canada in federal matters. The Canadian statute came into force on proclamation, Dec. 31, 1949. Dec. 27, The Government of Canada gave full recognition to the United States of Indonesia when the republic of Jacarta attained self-government.

1950. Jan. 9-14, Commonwealth Conference on Foreign Affairs met at Colombo, Ceylon. Hon. L. B. Pearson, Secretary of State for External Affairs, was head of the Canadian delegation. Jan. 10-12, Federal-Provincial Conference held at Ottawa: Premiers of the ten provinces met with Prime Minister St. Laurent to discuss the question of constitutional amendments. A continuing committee of provincial attorneys-general was appointed to work out a formula for procedure in regard to future constitutional amendments. Jan. 26, John James Bowlen, Calgary, Alta., appointed Lieutenant-Governor of Alberta. Feb. 16, Second Session of the 21st Parliament of Canada, opened. Mar. 1 Supreme Court of Canada ruled that Federal Government controls were valid and that the decision remains with Parliament as to when the 'emergency' no longer exists. Railways awarded an increase in freight rates by the Board of Transport Commission.

## APPENDIX II

## APPENDIX III

### Foreign Trade of Canada, 1948 and 1949

Chapter XXII of this volume includes foreign trade figures for the calendar year 1948. However, at the time of going to press it is possible to give monthly figures up to the end of 1949; these are shown in the following table together with monthly data for 1948 which are given for purposes of comparison.

It will be noted that domestic exports showed an increase in January, April, June and August of 1949 as compared with the same months in 1948; a decrease was shown in each of the other months. Imports showed an increase in each month over the previous year except in September, October and December.

#### 1.—Trade of Canada (Excluding Gold), by Months, 1948 and 1949

NOTE.—Monthly figures from 1940 to 1947 are given in corresponding tables in previous Year Books beginning with the 1943-44 edition.

Month	Imports		Domestic Exports		Total Trade	
	1948	1949	1948	1949	1948	1949
	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
January.....	206,077	223,786	235,384	237,030	445,137	462,799
February.....	182,167	205,976	208,269	204,994	392,482	413,112
March.....	197,051	235,946	228,369	216,787	427,956	454,952
April.....	226,690	242,698	212,337	237,792	441,779	482,974
